## Preamble:

We, at Pimpri Chinchwad University, offer the Bachelor of Technology in Computer science and Engineering program to provide students with a comprehensive education in the science and practice of recent trends in computer engineering. Our mission is to prepare graduates who are competent, compassionate, and committed to promote technology through cutting edge practical assignments.

The B.Tech. in Computer Science and Engineering program integrates knowledge from various disciplines such as mathematics, science, engineering, statistics and programming languages to provide a holistic understanding of the core of computer science in engineering. The curriculum includes courses in databases, computer network, data structures, operating systems, web technologies; cloud computing, compiler construction and artificial intelligence. Students will also have opportunities to gain practical experience through internships, mini and major projects, webinars and various technical competitions like hackathon.

Our program aims to develop student's critical thinking, communication, and leadership skills to enable them to work effectively and to provide sustainable solutions for the real-world technical challenges in the recent industry trends by maintaining professional standards, ethical values and integrity. Graduates of our program will be able to apply their knowledge and skills to work on the cutting-edge technologies of the industry and also to appear for post graduate educations in respective fields.

We are committed to providing a supportive and inclusive learning environment that values diversity, equity, and inclusion. Our faculty members are dedicated to excellence in teaching, research, and technology and are actively engaged in advancing the field of computer and engineering through scholarly activities and professional organizations. We invite students who share our passion to use and create technology for computer engineering to join our program and embark on a journey of learning and growth that will prepare them for rewarding careers and lifelong learning.

# Vision and Mission of Program:

## Vision:

To develop engineers well versed with Critical Theory and Practical's (problem solving ability); and sensitive to National and Global challenges from Inter-disciplinary perspective. To create Industry ready; socially and ethically strong professionals.

## Mission:

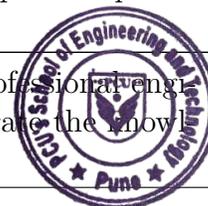

Our mission is

- To develop the Computer Professionals by imparting computer engineering knowledge with professional ethics
- To provide the service to the communities to which we belong at local and national levels, combined with a deep awareness of our ethical responsibilities to our profession and to society

## Program Outcome

At the end of program, students should be able to

<b>PO 1</b>	<b>Engineering knowledge:</b> Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
<b>PO 2</b>	<b>Problem analysis:</b> Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
<b>PO 3</b>	<b>Design/development of solutions:</b> Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
<b>PO 4</b>	<b>Conduct investigations of complex problems:</b> Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
<b>PO 5</b>	<b>Modern tool usage:</b> Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
<b>PO 6</b>	<b>The engineer and society:</b> Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
<b>PO 7</b>	<b>Environment and sustainability:</b> Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

<b>PO 8</b>	<b>Ethics:</b> Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
<b>PO 9</b>	<b>Individual and team work:</b> Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
<b>PO 10</b>	<b>Communication:</b> Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
<b>PO 11</b>	<b>Project management and finance:</b> Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
<b>PO 12</b>	<b>Life-long learning:</b> Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## Program Educational Objectives

Program Educational Objectives (PEOs) for a BTECH in Artificial Intelligence & Machine Learning program are as follows:

- **PEO 1:** To provide students with knowledge and skills to become leading experts in the field of computer science engineering.
- **PEO 2:** To provide an innovative and comprehensive curriculum that integrates theoretical knowledge with practical experience, research opportunities, and professional development
- **PEO 3:** To groom the student's overall personality for professional growth.
- **PEO 4:** To inculcate values and ethics among the students and making them aware about their social commitments.

## Program Specific Outcomes

At the end of program, students should be able to

<b>PSO 1</b>	Use knowledge to write programs and integrate them with the hardware/software products in the domains of artificial Intelligent systems, data Science, networking and web technology.
<b>PSO 2</b>	Participate in planning and implement solutions to cater to business specific requirements, displaying team dynamics and professional ethics.

# COURSE SYLLABUS

**B.TECH COMPUTER SCIENCE & ENGINEERING  
(AI & DATA SCIENCE)**

**SEMESTER-III**

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester:</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Data Structures and Algorithms</b>			<b>Course Code/ Course Type</b>		<b>UBTDS201/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	

Pre-Requisite:

1. Knowledge of C Programming

**Course Objectives (CO):**

**The objectives of Data Structures and Algorithms are:**

1. Understand the fundamental concepts of data structures and algorithm analysis.
2. Apply standard searching and sorting algorithms to solve computational problems.
3. To understand and implement various types of linked lists for efficient dynamic data storage and manipulation
4. To apply the concepts, operations, and applications of stack and queue data structures.
5. To Implement Non-Linear Data Structures like Trees and graphs for solving complex hierarchical and network-based problems.

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Understand the foundational concepts of data structures and algorithmic strategies such as divide & conquer and greedy methods for problem solving.
2. Implement and analyze standard searching and sorting algorithms, and evaluate their performance across different scenarios.
3. Develop and manipulate various types of linked lists to manage dynamic data structures efficiently.
4. Apply the concepts of stacks and queues, including their types and applications in algorithmic problem solving.
5. Construct and traverse tree and graph structures using appropriate algorithms for hierarchical and network-based computations.

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
Introduction, Arrays, and Strings: Introduction to data structures, abstract data types (ADTs), Data structure classification, Problem Solving, Introduction to algorithms, pseudocode, algorithm complexity, basic algorithmic notations, and algorithmic design strategies: - Divide & Conquer and Greedy algorithm. Arrays, linear and multidimensional arrays, and core operations such as traversal, insertion, deletion, and searching. Sparse matrices. String processing, String storage, basic operations (comparison, concatenation, substring search)	<b>CLO 1</b>	<b>9</b>

*Danda*

UNIT II		
Searching and Sorting: Searching: Techniques of searching—Linear and Binary search Sorting—Types—Internal and External and Sort Stability and efficiency Sorting methods: bubble sort, insertion sort, selection sort, quick sort, and merge sort. Comparison of all sorting methods. Analysis of all sorting methods for Best, worst, and average cases	CLO 2	9
UNIT III		
Linked Lists Introduction to linked lists and types of linked lists: singly linked lists, circular linked lists, doubly linked lists, and doubly circular linked lists. Primitive operations on linked lists—creation, traversal, insertion, deletion, concatenation, searching, and sorting	CLO 3	9
UNIT IV		
Stacks & Queues: Introduction to stacks and queues, concepts, memory representations (arrays and linked lists), and fundamental operations (push, pop, and peek for stacks; enqueue and dequeue for queues). Applications of stacks: expression evaluation (infix, postfix, prefix), parenthesis matching, recursion (concepts, types of recursion), and back-tracking algorithm. Types of queues: ordinary queues, circular queues, priority queues, and double-ended queues.	CLO 4	9
UNIT V		
Trees and Graphs: Concept and terminology, Types of trees, tree representations using arrays and linked lists, and operations such as creation, insertion, and deletion. Binary search trees and conversion between general and binary trees, various tree traversal methods (inorder, preorder, and postorder), both recursive and non-recursive. Graph : Introduction, basic terminology, and representations using adjacency matrices and adjacency lists. Graph traversal algorithms: Breadth First Search (BFS) and Depth First Search (DFS) Spanning trees, minimal spanning tree algorithms (Prim’s and Kruskal’s), and shortest path algorithms such as Dijkstra’s method.	CLO 5	9
<b>Total Hours</b>		<b>45</b>

### Learning Resources:

#### Text Books:

1. Seymour Lipschutz, “Data Structures”, Schaum’s Outline Series.
2. Sartaj Sahni, Ellis Horowitz, “Data Structures and Algorithms in C”, Universities Press.

#### Reference Books:

1. Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, “Introduction to Algorithms”, MIT Press.
2. Narasimha Karumanchi, “Data Structures and Algorithms Made Easy”, CareerMonk Publications.

#### Online Resources/E-learning Resources:

1. <https://nptel.ac.in/courses/106102064> Data Structures and Algorithms, IIT Delhi, Prof. Naveen Garg.
2. <https://nptel.ac.in/courses/106106127> Programming, Data Structures and Algorithms, IIT Madras, Dr. N.S. Narayanaswamy.

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>		<b>Semester: 5</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Data Structures and Algorithms Laboratory</b>		<b>Course Code/ Course Type</b>		<b>UBTCDS202/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>		<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>				<b>Assessment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>
-	1	-	1	2	25	-	25

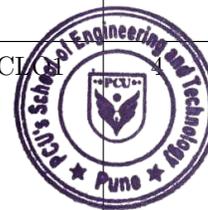

Pre-Requisite:

1. Basic knowledge of Programming in C

<b>Course Objectives (CO):</b>	<p><b>The objectives of Data Structures &amp; Algorithms Laboratory are:</b></p> <ol style="list-style-type: none"> <li>1. Develop hands-on skills for implementing fundamental data structures like arrays and strings.</li> <li>2. Apply and compare various searching and sorting algorithms using practical coding approaches.</li> <li>3. Implement dynamic data structures like linked lists for effective data manipulation.</li> <li>4. Design and execute stack, queue, and binary search tree operations for real-time applications.</li> <li>5. Implement graph and tree algorithms for traversal and pathfinding using adjacency structures.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Demonstrate basic operations on arrays and strings through programming exercises.</li> <li>2. Implement and analyze searching and sorting algorithms for performance and correctness.</li> <li>3. Apply linked list structures (singly, doubly) in solving real-world data organization problems.</li> <li>4. Construct and manipulate stack, queue, and binary search tree structures using C++.</li> <li>5. Implement graph-based algorithms such as DFS, BFS, and minimum spanning tree algorithms.</li> </ol>

### Practical Plan:

Practical Number	Practical Title	Week Number	Details	CLO	Hours
1	Practical 1 :	1,2	To implement and demonstrate basic array operations (insertion, deletion, traversal, and searching) and fundamental string manipulations.	CLO1	4
2	Practical 2:	3,4	Write a program that uses both recursive and non-recursive functions to perform the following searching operations for a key value in a given list of integers: <ol style="list-style-type: none"> <li>1. Linear search</li> <li>2. Binary search</li> </ol>	CLO	

*Dan*

3	Practical 3:	5	WAP to sort an array of N elements using Selection sort and Insertion sort	CLO2	2
4	Practical 4:	6,7	WAP to sort an array of N elements using Bubble sort and Quick sort	CLO2	4
5	Practical 5:	8,9	WAP to perform insertion and deletion in a single and double linked list	CLO3	4
6	Practical 6:	10	WAP to demonstrate push, pop, traverse operations performed on stack	CLO3	2
7	Practical 7:	11	WAP to implement linear / circular queues using arrays.	CLO4	2
8	Practical 8:	12	Write a program to perform the following operations: 1.Insert an element into a binary search tree. 2.Delete an element from a binary search tree. 3.Search for a key element in a binary search tree.	CLO4	2
9	Practical 9:	13	Write a program to implement Depth First Search / Breadth First Search Algorithm	CLO5	2
10	Practical 10:	14,15	Write a program to implement a minimum spanning tree	CLO5	4

## Learning Resources:

### Text Books:

1. Seymour Lipschutz, "Data Structures", Schaum's Outline Series.
2. Sartaj Sahni, Ellis Horowitz, "Data Structures and Algorithms in C", Universities Press.

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>		<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Python Programming</b>		<b>Course Code/ Course Type</b>		<b>UBTDS203/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>		<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>				<b>Assessment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>

Pre-Requisite:

1. Basic knowledge of Programming in C

**Course Objectives (CO):**

**The objectives of Python Programming are:**

1. To learn the fundamentals of the Python programming language.
2. To create Python list tuple to represent compound data. solving, and learning methods in solving engineering problems.
3. To write and execute simple as well as complex Python programs.
4. To analyze the concepts of procedural as well as object-oriented Python programs.
5. To perform files handling operations and handle exceptions using Python.

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Elaborate the features of Python programming language.
2. Apply the conditional and looping constructs using python.
3. Use the multidimensional array and string operations using python.
4. Analyze and apply the object-oriented concepts using python programming.
5. Apply the file handling and exception handling using python programming.

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Python:</b> Python Introduction- Features, Identifiers, Reserved words, Indentation, Comments, Built-in Data types and their Methods: Strings, List, Tuples, Dictionary, and Set - Type Conversion- Operators. Execution of a Python, Program, Writing Our First Python Program, Statements Precedence of Operators.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Decision Making and looping:</b> Conditional (if), Alternative (if-else), Chained Conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Math and Random number functions.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>Array and String:</b> Arrays in Python, Strings and Characters. Strings: String Slices, Immutability, String Functions and Methods, String Module; Lists as Arrays, Sum an Array of Numbers, Linear Search, Binary Search	<b>CLO</b>	

*Danda*

UNIT IV		
<b>Function and OOPs concept:</b> User defined functions - function arguments & its types, lambda functions and list comprehension, OOPs Concepts -Class and Objects, Constructors – Data hiding- Data Abstraction- Inheritance.	<b>CLO 4</b>	<b>9</b>
UNIT V		
Text Files, Reading and Writing Files, Format Operator; Command Line Arguments, Errors and Exceptions, Handling Exceptions, Modules, Packages; Illustrative Programs: Word Count, Copy File.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Y. Daniel Liang, "Introduction to Programming using Python", Pearson, 2012.
2. Wes McKinney, "Python for Data Analysis: Data Wrangling with Pandas, NumPy, and Python", O'Reilly, 2nd Edition, 2018.

### Reference Books:

1. Wesley J. Chun, "Core Python Programming", Prentice Hall, 2006
2. Mark Lutz, "Learning Python", O'Reilly, 4th Edition, 2009

### Online Resources/E-learning Resources:

-	1	-	1	2	25	-	25

Pre-Requisite:

1. Basic knowledge of Programming in C

**Course Objectives (CO):**

**The objectives of Python Programming Laboratory are:**

1. To learn the fundamentals of the Python programming language.
2. To create Python list tuple to represent compound data. solving, and learning methods in solving engineering problems.
3. To write and execute simple as well as complex Python programs.
4. To analyze the concepts of procedural as well as object-oriented Python programs.
5. To perform files handling operations and handle exceptions using Python.

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Develop static, interactive, and adaptive visualizations using various libraries and tools.
2. Design personalized and context-aware data visualization systems.
3. Visualize real-time and multimodal data effectively for various applications.
4. Integrate machine learning insights into visual formats to enhance interpretability.
5. Design and deploy a complete adaptive visualization project using real-world datasets.

### Practical Plan:

Practical Number	Practical Title	Week Number	Details	CLO	Hours
1	Practical 1 : Command Line Argument	1	To write a python program that accept command line arguments as input and perform some operations.	CLO1	2
2	Practical 2: Data structure	2	To write a python program to perform Creation, indexing, slicing, concatenation and repetition operations on Python built-in data types: Strings, List, Tuples, Dictionary, and Set.	CLO1	2
3	Practical 3: Control Statements	3	To write a python program to Solve problems using decision and looping statements.	CLO2	2
4	Practical 4: Linear Search	4	To write a python program to handle numerical operations using math and random number functions.	CLO3	2

*Danish*

5	Practical 5: Binary Search	4	To write a python program to perform linear search & Binary search using strings.	CLO3	2
6	Practical 6: Numerical Operations	6	To write a python program to perform lambda functions and list comprehension.	CLO4	2
7	Practical 7: User Defined Functions	7	To write a python program to Create user-defined functions with different types of function arguments with example.	CLO4	2
8	Practical 8: Packages and Modules	8	To write a python program to Create packages and import modules from packages to solve real problems.	CLO4	2
9	Practical 9: File Handling Operations	9	To write a python program to perform File manipulations- open, close, read, write, append and copy from one file to another.	CLO5	2
10	Practical 10: Exception Handling Operations	10	To write a python program to handle Exceptions using Python Built-in Exceptions.	CLO5	2

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Digital Fundamentals :</b> Number Systems –Decimal, Binary, Octal, Hexadecimal, 1's and 2's complements, Codes –Binary, BCD, Excess 3, Gray, Alphanumeric codes, Boolean theorems, Logic gates, Universal gates, Sum of products and product of sums, Minterms and Maxterms, Karnaugh map Minimization and Quine.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Combinational Circuit Design:</b> Design of Half and Full Adders, Half and Full Subtractors, Binary Parallel Adder –Carry look ahead Adder, BCD Adder, Multiplexer, Demultiplexer, Magnitude Comparator, Decoder, Encoder, Priority Encoder.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>Synchronous Sequential Circuits:</b> Flip flops –SR, JK, T, D, Master/Slave FF –operation and excitation tables, Triggering of FF, Analysis and design of clocked sequential circuits –Design –Moore/Mealy models, state minimization, design of Counters-Ripple Counters,, Shift registers, Universal Shift Register.	<b>CLO 3</b>	<b>9</b>

*Danda*

UNIT IV		
<b>Memory Devices and Digital Integrated Circuits:</b> Digital integrated circuits: logic families and their Characteristics -RTL, TTL, ECL, CMOS. Basic memory structure –ROM –PROM –EPROM –EEPROM Programmable Logic Devices –Programmable Logic Array (PLA), Programmable Array Logic (PAL), Field Programmable Gate Arrays (FPGA).	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>8086 Microprocessor:</b> Introduction to 8086 architecture , pin description, External memory interfacing, Maximum mode bus cycle, memory interfacing, Minimum mode System configuration, Maximum mode system configuration, Interrupts processing, instruction set.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Signal System</b>			<b>Course Code/ Course Type</b>		<b>UBTDSOE203/OE</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assessment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite: 1. Signal theory, Math								
<b>Course Objectives (CO):</b>			<b>The objectives of Signal System are:</b> 1. To recall the basic knowledge about the different type of signals 2. To recognize the system analysis in frequency domain. 3. To apply the knowledge of Fourier and Laplace transform. 4. To analyze correlation and spectral density. 5. To evaluate probability, random variables & signals.					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. To identify different type of signals. 2. Explain the system analysis in frequency domain. 3. Apply knowledge of Fourier and Laplace transform. 4. Analyze correlation and spectral density 5. Evaluate the probability, random variables & signals.					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Signals and Systems:</b> Definition of signals and systems, communication and control systems as examples, Classification of signals: Continuous time and discrete time, even, odd, periodic and non-periodic, deterministic and non-deterministic, energy and power. Operations on signals: Amplitude scaling, addition, multiplication, differentiation, integration (accumulator for DT), time scaling, time shifting and folding, precedence rule. Elementary signals: exponential, sine, step, impulse and its properties, ramp, rectangular, triangular, signum, sinc. Systems: Definition, Classification: linear and non linear, time variant and invariant, causal and non-causal, static and dynamic, stable and unstable, invertible.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>System Analysis:</b> System modeling: Input output relation, impulse response, block diagram, integro-differential equation and state-space representation. Definition of impulse response, convolution integral, convolution sum, computation of convolution integral using graphical method for unit step to unit step, unit step to exponential, exponential to exponential and unit step to rectangular, rectangular to rectangular only. Computation of convolution sum by all methods.	<b>CLO 2</b>	<b>9</b>

*Danda*

UNIT III		
<b>System Analysis in Frequency Domain using Fourier Transform &amp; Laplace Transform:</b> Definition and necessity of CT and DT Fourier series and Fourier transforms. Analogy between CTFS, DTFS and CTFT, DTFT. CT Fourier series, CT Fourier transform and its properties, problem solving using properties, amplitude spectrum, phase spectrum of the signal and system. Interplay between time and frequency domain using sinc and rectangular signals. Limitations of FT and need of LT and ZT, ROC and pole zero concept.	CLO 3	9
UNIT IV		
<b>Correlation and Spectral Density:</b> Definition of Correlation and Spectral Density, correlation, analogy between correlation, covariance and convolution, conceptual basis, autocorrelation, cross correlation, energy/power spectral density, properties of correlation and spectral density, inter relation between correlation and spectral density..	CLO 4	9
UNIT V		
<b>Probability, Random Variables and Random Signals:</b> Experiment, sample space, event, probability, conditional probability and statistical independence. Random variables: Continuous and Discrete random variables, cumulative distributive function, Probability density function, properties of CDF and PDF. Statistical averages, mean, moments and expectations, standard deviation and variance. Probability models: Uniform, Gaussian, Binomial.	CLO 5	9
<b>Total Hours</b>		45

### Practical Plan:

Practical Number	Practical Title	Week Number	Details	CLO	Hours
1	Practical 1	1	Sketch and write Defining mathematical expression for the following signals in CT and DT using MATLAB- Unit step, rectangular, exponential, signum, sine, sinC, triangular, unit impulse, unit ramp.	CLO1	2
2	Practical 2	2	Take any two CT and DT signals and perform the following operation Amplitude scaling, addition, multiplication, differentiation, integration (accumulator for DT), time scaling, time shifting and folding	CLO2	2
3	Practical 3	3	Express any two system mathematical expressions in input output relation form and determine whether each one of them is, Memory less, Causal, Linear, Stable, Time in variant, Invertible	CLO3	2
4	Practical 4	4	Express any two system mathematical expressions in input output relation form and determine whether each one of them is, Memory less, Causal, Linear, Stable, Time in variant, Invertible	CLO4	2

5	Practical 5	5	Express any two system mathematical expressions in impulse response form and determine whether each one of them is, Memory less, Causal, Linear, Stable, Time in variant, Invertible	CLO3	2
6	Practical 6	6	State and prove the properties of Fourier Transform. Take rectangular and sinc signal as examples and demonstrate the applications of CTFT properties. And also demonstrate the interplay between the time and frequency domain.	CLO4	2
7	Practical 7	7	State and prove the properties of Fourier Transform. Take rectangular and sinc signal as examples and demonstrate the applications of CTFT properties. And also demonstrate the interplay between the time and frequency domain.	CLO4	2
8	Practical 8	8	State and prove the properties of Laplace Transform. Take any example of a system in time domain and demonstrate the application of LT in system analysis	CLO4	2
9	Practical 9	9	State and prove the properties of Laplace Transform. Take any example of a system in time domain and demonstrate the application of LT in system analysis	CLO4	2
10	Practical 10	10	Design and implement a complete adaptive visualization solution for a dataset (e.g., health data, IoT, education analytics)	CLO4	2

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>		<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Discrete Structures</b>		<b>Course Code/ Course Type</b>		<b>UBTDS205/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>		<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>				<b>Assessment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>
<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>20</b>	<b>30</b>	<b>-</b>

Pre-Requisite:

1. Determinants, Matrices, Limits, continuity, Differentiation

**Course Objectives (CO):**

**The objectives of Discrete Structures are:**

1. To familiarize the students with the concepts and techniques of logics & sets.
2. To recognize relations and its real-life application.
3. To comprehend Algebraic structure and its application.
4. To acquire the knowledge of graph theory
5. To acquire the knowledge of trees to understand the concepts of different types of algorithms and its applications that would enhance analytical thinking power.

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Explain the logic, normal forms and its application.
2. Comprehend the relations & functions.
3. Comprehend the algebraic structures.
4. Comprehend & apply the knowledge of graph theory in data structure and other core subjects.
5. Solve traversing problems, searching by using the concept of Trees.

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Logic</b> : Propositions and Connectives, Truth table, laws of Propositions, Logical Equivalence, Normal Forms: DNF, CNF, PCNF & PDNF Logical implication, Quantifiers, Application of Propositional logic.	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Relation and Functions:</b> Relation, representation of relation, types, Equivalence relation, Equivalence class, Partitions, Partial ordering relation, Hasse diagram, Lattice, Function and types of Functions.	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>Algebraic structures:</b> Algebraic structures, Semi group, Monoid, Group, abelian group, cyclic group, Coding Theory.	<b>CLO 3</b>	<b>6</b>

*Danda*

UNIT IV		
<b>Graph and Applications:</b> Introduction, Graph models, Hand shaking lemma, Types of graphs, Matrix representation of Graphs, adjacency and incidence Matrix, Isomorphism, Connectivity, Eulerian and Hamiltonian Graphs, Shortest path, Travelling Salesman Problem, Dijkstra's algorithm, Planar graph and Euler formula.	<b>CLO 4</b>	<b>6</b>
UNIT V		
<b>Trees:</b> Introduction, properties, Rooted tree, Tree Traversal, path length, weighted tree, prefix code, Huffman coding, spanning tree, Minimal spanning tree, Kruskal algorithm, Prim's algorithm, cut set, The Max flow- Min cut Theorem (Transport Network) Application of tree.	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

<b>Name of the Program:</b>		<b>BTECH CSE - AIDS</b>			<b>Semester: 4</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Computer Organization and Architecture</b>			<b>Course Code/ Course Type</b>		<b>UBTCE219/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>20</b>	<b>30</b>	<b>-</b>	
Pre-Requisite: 1. NIL								
<b>Course Objectives (CO):</b>			<b>The the objective of Computer Organization are:</b> 1. To recognize the components of Computer 2. To articulate the principles of computer organization and the basic architectural concepts 3. To learn simple register transfer language to specify various computer operations 4. To interpret and summarize the pipelining concept and multiprocessor systems 5. To design, and program a simple digital computer ALU operation					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Student will learn the concepts of computer organization for several engineering applications 2. Student will develop the ability and confidence to use the fundamentals of computer organization as a tool in the engineering of digital systems. 3. An ability to identify, formulate, and solve hardware and software computer engineering problems using sound computer engineering principle 4. To impart the knowledge on micro programming 5. Comprehend the concepts of advanced pipelining techniques					

### Course Contents/Syllabus:

Descriptors/Topics	CLO	Hours
<b>UNIT I</b>		
<b>Fundamentals Of Computers</b> Basic Functional units of Computers: Types and generation of computers, Functional units, basic Operational concepts, Bus structures. Software, Performance, Architecture: Von Neumann and Harvard architecture. Data Representation: Signed number representation, fixed and floating-point representations. Booth's Algorithm, Restoring Algorithm, Non-Restoring algorithm	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>THE MEMORY SYSTEM</b> Basic concepts of semiconductor RAM memories Memory Hierarchy, Primary memory, Secondary Memory and its types, Magnetic Tape, Magnetic Disk, Optical disk, magnetic-optical, and other modern disks etc, Cache memories and its types, Cache coherence and Virtual Memory, Paging Replacement algorithm, DMA, DMA Transfer modes, sequential access, and direct access storage device.	<b>CLO</b>	
<b>UNIT III</b>		

<b>REGISTER TRANSFER LANGUAGE AND MICRO-OPERATIONS</b> Register Transfer Language and Micro Operations: Introduction to RTL- Registers, Bus and memory transfers, Micro operations: Arithmetic, Logic, and Shift micro-operation, Arithmetic logic shift unit	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Central Processing Unit Organization</b> Basic Computer Organization: Computer Registers and types, Instructions, Instruction cycle, Types of Instructions: Memory Reference Instructions, Input & output, Timing and control, Interrupts, Central Processing Unit organization: General Register Organization, stack organization, Addressing modes and its types, Data Transfer and Manipulation, Program Control, CISC and RISC processors Control unit design: Design approaches,Control memory, Address sequencing Parallelism, Throughput and Speedup .	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>MULTI-PROCESSOR ORGANIZATION</b> Pipelining and Vector Processing: Basic concepts, Instruction level Parallelism, Pipeline hazards, Hazards, Time Space Diagram, instruction Pipelining, Arithmetic Pipelining, Multiprocessor and Multicore operation, Loosely-coupled (distributed memory) multiprocessor system, Tightly-coupled (shared memory) multiprocessor system,SISD,SIMD, MISD,MIMD.	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

### Learning Resources:

#### Text Books:

1. Computer Organization – Carl Hamacher, ZvonksVranesic, SafeaZaky, Vth Edition, McGraw Hill
2. Computer Organization and Architecture – William Stallings Sixth Edition, Pearson/PHI

#### Reference Books:

1. Computer Systems Architecture – M.Moris Mano, IIIrd Edition, Pearson/PHI
2. Structured Computer Organization – Andrew S. Tanenbaum, 4th Edition PHI/Pearson
3. Fundamentals or Computer Organization and Design, - SivaraamaDandamudi Springer Int. Edition.
4. Computer Architecture a quantitative approach, John L. Hennessy and David A. Patterson, Fourth Edition Elsevier

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Operating System</b>			<b>Course Code/ Course Type</b>		<b>MOOCDS301/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assessment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
-	-	2	2	2	25	-	25	

Pre-Requisite:

1. Computer Organization and Architecture
2. Fundamentals of Data Structures

**Course Objectives (CO):**

**The objectives of Operating System are:**

1. Understand the fundamental concepts and responsibilities of an operating system
2. Explore how operating systems manage hardware resources such as CPU, memory, storage, and I/O devices
3. Gain insights into process scheduling, synchronization, and deadlock prevention techniques
4. Learn how file systems and memory management strategies are implemented in real-world OSs.
5. Develop hands-on skills by analyzing and building small components of an operating system using labs and simulations

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Explain the architecture and functions of modern operating systems
2. Implement and simulate key OS concepts such as process scheduling and memory allocation
3. Analyze and apply synchronization techniques for process and thread management.
4. Understand and evaluate file systems, I/O management, and protection mechanisms.
5. Demonstrate the ability to solve real-world OS problems using practical tools and test environments

### Course Contents/Syllabus:

Descriptors/Topics	CLO	Hours
<b>UNIT I</b>		
Introduction to Operating Systems & Processes Evolution of OS and types (batch, multi-tasking, real-time), OS as a resource manager, Processes and threads, Context switching and states	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
CPU Scheduling and Concurrency Process scheduling: FCFS, SJF, Round Robin, Multi-level. Multithreading and CPU burst prediction. Process synchronization: critical section, semaphores, mutexes. Deadlocks: detection, prevention, avoidance	<b>CLO</b>	

*Danda*

UNIT III		
Memory Management Contiguous and non-contiguous memory allocation, Paging and segmentation, Virtual memory and page replacement algorithms (FIFO, LRU), Swapping and memory fragmentation	CLO 3	6
UNIT IV		
File Systems and Storage Management File concepts, file access methods, and directory structure, Disk scheduling algorithms (FCFS, SSTF, SCAN), File system implementation: FAT, i-nodes, Mounting, allocation methods, and protection. .	CLO 4	9
UNIT V		
Security, I/O and Virtualization I/O structure, polling vs. interrupt-driven I/O, DMA and device drivers, OS-level security: authentication, access control, Basics of virtualization and containers.	CLO 5	9
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. William Stallings, Operating System: Internals and Design Principles, Prentice Hall, 8th Edition, 2014, ISBN-10: 0133805913 ISBN-13: 9780133805918.
2. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne, Operating System Concepts, John Wiley & Sons, Inc., 9th Edition, 2012, ISBN 978-1-118-06333-0
3. Das, Sumitabha, UNIX Concepts and Applications, TMH, ISBN-10: 0070635463, ISBN-13: 978-0070635463, 4th Edition.

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Linux, OpenShift &amp; System Administration Fundamentals</b>			<b>Course Code/ Course Type</b>		<b>MOOCDS302 / PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>25</b>	<b>-</b>	<b>25</b>	

Pre-Requisite:

1. Basic understanding of operating systems and networking concepts

<b>Course Objectives (CO):</b>	<p><b>The objectives of Linux, OpenShift &amp; System Administration Fundamentals are:</b></p> <ol style="list-style-type: none"> <li>1. To provide foundational knowledge of Linux operating systems and system administration.</li> <li>2. To introduce OpenShift as a platform for developing and deploying containerized applications.</li> <li>3. To equip students with practical skills for managing Linux systems, including installation, configuration, and troubleshooting.</li> <li>4. To integrate container orchestration principles with real-world applications using OpenShift.</li> <li>5. To prepare students for entry-level certifications in Linux system administration and container management.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Demonstrate proficiency in basic Linux commands and shell scripting.</li> <li>2. Install, configure, and manage a Linux system for users, processes, and file systems</li> <li>3. Develop and deploy containerized applications using OpenShift.</li> <li>4. Apply fundamental system administration skills, including user management and system security.</li> <li>5. Troubleshoot and resolve common issues in Linux and containerized environments.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I Linux Fundamentals</b>		
Overview of Linux Operating System(Linux Distributions,Kernel and Shell Basics,),Command Line Essentials (File System Navigation,File Manipulation Commands (ls, cp, mv, rm, chmod, chown), Text Editors and Utilities (Introduction to vi/vim,grep, sed, awk for Text Processing), Basic Shell Scripting -(Creating and Executing Shell Scripts,Using Variables and Conditionals,Hands-on Exercise: Write and execute shell scripts for file management tasks).	<b>CLO 1</b>	<b>6</b>
<b>UNIT II Linux System Administration Essentials</b>		

*Danda*

Installing Linux and Managing Boot Process –(Partitioning and Filesystems,GRUB Configuration) ,User and Group Management (Adding, Deleting, and Modifying Users and Groups,Permissions and Access Control Lists (ACLs)),Process and Service Management-(Monitoring and Managing Processes (ps, top, kill),Starting, Stopping, and Enabling Services with systemctl), Basic Network Configuration –(Configuring IP Addresses and Hostnames,Understanding Network Tools (ping, netstat, ss) Hands-on Exercise: Install a Linux system and configure basic services).	<b>CLO 2</b>	<b>6</b>
<b>UNIT III Introduction to OpenShift Applications</b>		
Understanding Containers and OpenShift Basics-(Introduction to Containers and Kubernetes,OpenShift Architecture and Features),Deploying Applications on OpenShift-(Creating Projects and Deployments,Managing Pods and Services),OpenShift CLI and Web Console -(Using oc Commands for Deployment,Configuring Applications via OpenShift Console),Scaling and Managing Applications-(Horizontal and Vertical Scaling,Managing ConfigMaps and Secrets,Hands-on Exercise: Deploy a simple web application on OpenShift using the CLI and Web Console).	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV Advanced Linux System Administration</b>		
File System and Storage Management –(Creating and Managing Partitions and Logical Volumes (LVM),Mounting File Systems and NFS Configuration),System Security-(Configuring Firewall and SELinux Policies,Managing SSH Access and Key-Based Authentication),Backup and Restore Techniques -(Using tar, rsync, and cron for Scheduled Backups), Troubleshooting Linux Systems – (Analyzing Logs and Diagnosing Boot Issues,Common Commands for Problem Resolution,Hands-on Exercise: Configure LVM and set up secure remote access using SSH).	<b>CLO 4</b>	<b>6</b>
<b>UNIT V Integration and Capstone Project</b>		
Integrating Linux with OpenShift – (Managing Linux Nodes in an OpenShift Cluster,Monitoring and Logging in OpenShift and Linux), OpenShift Application Lifecycle Management-(Building and Deploying Containerized Applications with CI/CD,Using Operators for Application Management),Performance Optimization-(Optimizing System Resources in Linux,Managing Resource Quotas in OpenShift), Capstone Project: -Deploy and manage a multi-tier application on OpenShift using Linux administration techniques.	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. "Red Hat RH124: Red Hat System Administration I" (Official Course Material)
2. "Red Hat DO101: Introduction to OpenShift Applications" (Official Course Material).

<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	
Pre-Requisite: 1. NIL								
<b>Course Objectives (CO):</b>			<b>The objectives of Constitution of India are:</b> 1. To familiarize the students with the key elements of the Indian constitution 2. To enable students to grasp the constitutional provisions and values 3. To acquaint the students with the powers and functions of various constitutional offices and institutions. 4. To make students understand the basic premises of Indian politics 5. To make students understand the role of constitution and citizen-oriented measures in a democracy					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Analyze the basic structure of Indian Constitution 2. Remember their Fundamental Rights, DPSP's and Fundamental Duties (FD's) of our constitution 3. know about our Union Government, political structure & codes, procedures 4. Elaborate our State Executive & Elections system of India 5. Access the Amendments and Emergency Provisions, other important provisions given by the constitution					

### Course Contents/Syllabus:

Descriptors/Topics	CLO	Hours
<b>UNIT I</b>		
<b>Introduction to Indian Constitution</b> The Necessity of the Constitution, The Societies before and after the Constitution adoption. Introduction to the Indian constitution, The Making of the Constitution, The Role of the Constituent Assembly. The Preamble of Indian Constitution & Key concepts of the Preamble. Salient features of India Constitution	<b>CLO 1</b>	<b>8</b>
<b>UNIT II</b>		
<b>FR's, FD's and DPSP's</b> Fundamental Rights and its Restriction and limitations in different Complex Situations. Directive Principles of State Policy (DPSP) and its present relevance in our society with examples. Fundamental Duties and its Scope and significance in Nation building	<b>CLO 2</b>	<b>5</b>
<b>UNIT III</b>		
<b>Governance and Constitution</b> 1. Federalism in India - Features, Local Government -Panchayats -Powers and functions; 73rd and 74th amendments, Election Commission - Composition, Powers and Functions; Electoral Reforms, Citizen oriented measures - RTI and PIL - Provisions and significance	<b>CLO 3</b>	

*Danda*

<b>UNIT IV</b>		
<b>Union Executive</b> Parliamentary System, Union Executive – President, Prime Minister, Union Cabinet, Parliament - LS and RS, Parliamentary Committees, Important Parliamentary Terminologies. Supreme Court of India, Judicial Reviews and Judicial Activism.	<b>CLO 4</b>	<b>5</b>
<b>UNIT V</b>		
<b>IState Executive &amp; Elections, Amendments and Emergency Provisions</b> State Executive, Election Commission, Elections & Electoral Process. Amendment to Constitution (How and Why) and Important Constitutional Amendments till today. Emergency Provisions	<b>CLO 5</b>	<b>7</b>
<b>Total Hours</b>		<b>30</b>

### Learning Resources:

#### Text Books:

1. “Constitution of India” (for Competitive Exams) - Published by Naidhruva Edutech Learning Solutions, Bengaluru – 2022
2. “Engineering Ethics”, M.Govindarajan, S.Natarajan, V.S.Senthilkumar, Prentice –Hall, 2004

#### Reference Books:

1. “SamvidhanaOdu” - for Students & Youths by Justice HN NagamohanDhas, Sahayana, kerekon
2. “Constitution of India, Professional Ethics and Human Rights” by Shubham Singles, Charles E. Haries, and et al: published by Cengage Learning India, Latest Edition – 2019.
3. “Introduction to the Constitution of India”, (Students Edition.) by Durga Das Basu (DD Basu): Prentice –Hall, 2008
4. “The Constitution of India” by Merunandan K B: published by Merugu Publication.

#### Online Resources/E-learning Resources:

1. [https://opportunitycell.com/online-course-on-the-indian-constitution-by-ministry-of-law-justice/google-vignette-dated 19/4/2024](https://opportunitycell.com/online-course-on-the-indian-constitution-by-ministry-of-law-justice/google-vignette-dated-19/4/2024)

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>UHV-II: Understanding Harmony</b>			<b>Course Code/ Course Type</b>		<b>ACUHV201/AC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assessment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	
Pre-Requisite: 1. NIL								
<b>Course Objectives (CO):</b>			<b>The objectives of Understanding Harmony are:</b> 1. To train the student for Development of a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence 2. To comprehend (or develop clarity) the harmony in the human being, family, society and nature/existence 3. To strengthen self-reflection. 4. To infuse a sense of commitment and courage to act 5. 5. To understand Holistic Understanding of Harmony on Professional Ethics.					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Analyze the most important requirement for any human being. 2. Apply correct appraisal of Physical needs, meaning of Prosperity in detail 3. Analyze salient values in relationship, Friends and Foes, Empathy, False Prestige. 4. Develop holistic perception of harmony at all levels of existence 5. Apply the Holistic Understanding of Harmony on Professional Ethics					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Course Introduction - Need, Basic Guidelines, Content and Process for Value Education</b> 1. Purpose and motivation for the course, recapitulation from Universal Human Values-I 2. Self-Exploration-what is it? - Its content and process; Personality Traits- Self Excellence, Natural Acceptance” and Experiential Validation- as the process for self-exploration, Adaptability, Belief and Understanding- Self discipline 3. Continuous Happiness and Prosperity- A look at basic Human Aspirations 4. Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority 5. Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario 6. Method to fulfil the above human aspirations: understanding and living in harmony at various levels.	<b>CLO 1</b>	<b>8</b>
<b>UNIT II</b>		

*Danda*

<b>Understanding Harmony in the Human Being - Harmony in Myself:</b> 1. Understanding human being as a co-existence of the sentient, "I" and the material, "Body" 2. Understanding the needs of Self ("I") and "Body" - happiness and physical facility 3. Understanding the Body as an instrument of "I" (I being the doer, seer and enjoyer)- Habits and Hobbies, SWOT Analysis (Activity) 4. Understanding the characteristics and activities of "I" and harmony in "I" – Dalai Lamas" Tibetan Personality Test – Dr. Menninger"s Psychometric Test. 5. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail	<b>CLO 2</b>	<b>5</b>
<b>UNIT III</b>		
<b>Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship</b> 1. Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship 2. Understanding the meaning of Trust; Difference between intention and competence 3. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship, Friends and Foes, Empathy, False Prestige.	<b>CLO 3</b>	<b>5</b>
<b>UNIT IV</b>		
<b>Understanding Harmony in the Nature and Existence - Whole existence as Coexistence:</b> 1. Understanding the harmony in the Nature and its Equanimity, Respect for all, Nature as Teacher 2. Interconnectedness and mutual fulfillment among the four orders of nature- recyclability and self-regulation in nature 3. Understanding Existence as Co-existence of mutually interacting units in all- pervasive space 4. Holistic perception of harmony at all levels of existence.	<b>CLO 4</b>	<b>5</b>
<b>UNIT V</b>		
<b>Implications of the above Holistic Understanding of Harmony on Professional Ethics</b> 1. Natural acceptance of human values 2. Definitiveness of Ethical Human Conduct 3. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order 4. Vision for the Holistic alternatives, UHVs for entrepreneurship	<b>CLO 5</b>	<b>7</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. Human Values and Professional Ethics by R R Gaur, R Sangal, G P Bagaria, Excel Books, New Delhi, 2010
2. Jeevan Vidya: Ek Parichaya, A Nagaraj, Jeevan Vidya Prakashan, Amarkantak, 1999
3. Human Values, A.N. Tripathi, New Age Intl. Publishers, New Delhi, 2004.

### Reference Books:

1. The Story of My Experiments with Truth - by Mohandas Karamchand Gandhi
2. Small is Beautiful - E. F Schumacher
3. Slow is Beautiful - Cecile Andrews
4. The Story of Stuff (Book).

# COURSE SYLLABUS

**B.TECH COMPUTER SCIENCE & ENGINEERING  
(AI & DATA SCIENCE)**

**SEMESTER-IV**

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 4</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Database Management System</b>			<b>Course Code/ Course Type</b>		<b>UBTDS210/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite: 1. Knowledge of C Programming and DSA								
<b>Course Objectives (CO):</b>				<b>The the objective of Database Management System are:</b>				
				<ol style="list-style-type: none"> <li>1. Ability to design entity relationship and convert entity relationship diagrams into RDBMS and ability to identify the data models for relevant problems.</li> <li>2. Apply normalization for the development of application software's</li> <li>3. Develop understanding concepts of Relational Database design and query languages.</li> <li>4. Demonstrate effective Query processing and Transaction Processing.</li> <li>5. Summarize concurrency control protocols and recovery algorithms.</li> </ol>				
<b>Course Learning Outcomes (CLO):</b>				<b>Students would be able to:</b>				
				<ol style="list-style-type: none"> <li>1. An ability to design ER Model for any application</li> <li>2. To Decompose any Schema by applying normal forms</li> <li>3. To construct SQL queries for any requirement</li> <li>4. To Understand the Query Evaluation and Execution processes</li> <li>5. To write Trigger, Cursor, PL/SQL Programs and to design object oriented, extended relational schemas</li> </ol>				

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction</b> Database System Applications, Database Systems versus File Systems, View of Data, Data Models, Database Languages, Database Users and Administrators, Transaction Management, Database System Structure, Application architectures, History of Database Systems. Entity-Relationship Model, Basic Concepts, Constraints, Keys, Design Issues, Entity-Relationship Diagram, Weak Entity Sets, Extended E-R Features, Design of an E-R Database Schema, Reduction of an E-R Schema to Tables.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Relational Model</b> Structure of Relational Databases, The Relational Algebra, Extended Relational-Algebra Operations, Modification of the Database, Views, The Tuple Relational Calculus, The Domain Relational Calculus. Relational-Database Design:, First Normal Form, Pitfalls in Relational-Database, Design, Functional Dependencies, Decomposition, BCNF, Third, Fourth and more Normal Forms, Overall Database Design Process.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		

*Danda*

<b>Structured Query Language</b> Basic Structure, Set Operations, Aggregate Functions, Null Values, Nested Sub queries, Views, Integrity and Security, Domain Constraints, Referential Integrity, Assertions, Triggers, Security and Authorization, Authorization in SQL, Encryption and Authentication.	<b>CLO 3</b>	<b>9</b>
<b>UNIT IV</b>		
<b>Transaction Management</b> Transaction Concept, Transaction State, Implementation of Atomicity and Durability, Concurrent Execution, Serializability, Recoverability, Implementation of Isolation, Transaction Definition in SQL, Testing for Serializability.	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
<b>Concurrency Control</b> Lock-Based Protocols, Timestamp-Based Protocols, Validation-Based Protocols, Multiple Granularities, Multiversion Schemes, Deadlock Handling, Insert and Delete Operations Weak Levels of Consistency, Concurrency in Index Structures. Recovery System, issues & solutions.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

### Learning Resources:

#### Text Books:

1. Hector Garcia-Molina, Jeff Ullman, and Jennifer Widom, "Database Systems: The complete Book" - Pearson Education, 2002.

#### Reference Books:

1. Silberschatz, H. Korth and S. Sudarshan, "Database System Concepts", 4th Edition, McGraw-Hill International, 2002.
2. R. Elmasri and Shamakant B. Navathe, "Fundamentals of Database Systems", 3rd Edition, AddisonWesley , 2000

#### Online Resources/E-learning Resources:

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 4</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Database Management System Laboratory</b>			<b>Course Code/ Course Type</b>		<b>UBTDS211/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
-	1	-	1	1	25	-	25	
Pre-Requisite: 1. Basic knowledge of Programming in C								
<b>Course Objectives (CO):</b>			<b>The the objective of Database Management System Laboratory are:</b>  1. Develop understanding concepts of Relational Database design and query languages 2. Demonstrate effective Query processing and Transaction Processing. 3. Apply normalization for the development of application software's 4. Ability to design entity relationship and convert entity relationship diagrams into RDBMS and formulate SQL queries on the respect data 5. Ability to identify the data models for relevant problems					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>  1. An ability to design ER Model for any application 2. To Decompose any Schema by applying normal forms 3. To construct SQL queries for any requirement 4. To Understand the Query Evaluation and Execution processes 5. To write Trigger, Cursor, PL/SQL Programs and to design object oriented, extended relational schemas.					

### Practical Plan:

Practical Number	Practical Title	Week Number	Details	CLO	Hours
1	Practical 1	1	Analyze the problem and come with the entities in it. Identify what Data has to be persisted in the databases.	CLO1	2
2	Practical 2	2	Installation of MySQL and practicing DDL & DML commands.	CLO1	2
3	Practical 3	3	Practice queries using ANY, ALL, IN, EXISTS, UNION, INTERSECT Union: The union operator returns all distinct rows selected by two or more queries.	CLO2	2
4	Practical 4	4	Practice Queries using Aggregate functions, Group By, Having Clause and Order Clause.	CLO2	2
5	Practical 5	5	1. Practice Queries using Aggregate functions, Group By, Having Clause and Order Clause.	CLO2	2
6	Practical 6	6	Implement Indexes: An index is an ordered list of the contents of a column, (or a group of columns) of a table.	CLO3	2

7	Practical 7	7	Implement Exception handling	CLO3	2
8	Practical 8	8	Implement Triggers	CLO4	2
9	Practical 9	9	Implement Cursors	CLO4	2
10	Practical 10	10	Implementing Operations on relations using PL / SQL.	CLO5	2
11	Practical 11	11,12	Implementing Operations on relations using PL / SQL.	CLO5	4
12	Practical 12	13,14	Implementing Operations on relations using PL / SQL.	CLO5	4
13	Practical 13	15	Mini Project /Task	CLO 1,2,3,4,5	2

### Learning Resources:

<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>

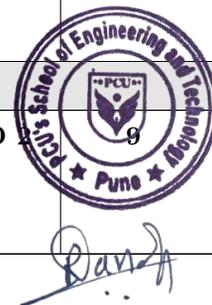

Pre-Requisite:

1. Basic knowledge of Programming in C and C++

<b>Course Objectives (CO):</b>	<p><b>The objectives of Java Programming are:</b></p> <ol style="list-style-type: none"> <li>1. To learn the fundamentals of Java programming, including syntax, data handling, control flow, and basic problem solving.</li> <li>2. To learn object-oriented principles such as abstraction, encapsulation, inheritance, and polymorphism, and apply them in designing modular applications.</li> <li>3. To apply advanced programming concepts including collections, generics, file handling, networking, and exception management.</li> <li>4. To develop software applications using JDBC connectivity and introduce students to ORM-based data handling.</li> <li>5. To design interactive applications using JavaFX graphical user interface components and event handling.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Grasp the fundamental programming concepts of Java, including variables, operators, control structures, and arrays.</li> <li>2. Apply object-oriented principles such as encapsulation, inheritance, and polymorphism to solve programming problems.</li> <li>3. Perform exception handling, implement multithreading, and work with collection classes in Java.</li> <li>4. Develop data-driven software applications using JDBC connectivity and structured database operations.</li> <li>5. Design graphical user interfaces using JavaFX and implement event-driven programming.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Java Programming Fundamentals</b> Introduction to Java and Java platform, JDK and JVM structure, installation and development environment setup, basic program structure, data types, variables, operators, input/output, conditional statements, looping constructs, arrays, strings, recursion fundamentals, and basic debugging.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Object-Oriented Programming in Java</b> Classes and objects, constructors, encapsulation, inheritance types, polymorphism, method overloading and overriding, abstract classes, interfaces, inner classes, access modifiers, packages and modules, immutability, and introduction to exception handling.	<b>CLO</b>	<b>9</b>

UNIT III		
<b>Collections, Generics &amp; Functional Programming</b> Arrays and collections, List–Set–Map interfaces, generics and bounded types, Comparable and Comparator, enumerations, autoboxing, lambda expressions, functional interfaces, method references, and introduction to Stream API for basic data processing.	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Java I/O, Networking &amp; GUI Development</b> File and directory handling, text and binary I/O operations, exception-handling techniques in I/O, regular expressions, basic networking concepts (TCP, UDP, HTTP), introduction to JavaFX user interface components, layouts, and basic event handling.	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Concurrency, Database Programming &amp; Testing</b> Introduction to multithreading and thread lifecycle, synchronization fundamentals, Executor framework basics, JDBC connectivity and CRUD operations, introduction to ORM concepts, and fundamentals of unit testing using JUnit.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. “Java Fundamentals a Comprehensive Introduction” Herbert Schildt and Dale Skrien, TMH
2. “Head First Java: Your Brain on Java - A Learner’s Guide”, 1st Edition, by Bert Bates, Kathy Sierra

### Reference Books:

1. “Java: the complete reference” by Herbert Schildt and Dale Skrien, TMH
2. “Java For Dummies (For Dummies” (Computer/Tech)) 8th Edition by Barry Burd

Pre-Requisite: 1. Basic knowledge of English								
<b>Course Objectives (CO):</b>				<b>The the objective of Project Based on Digital and Technological Solutions are:</b> 1. Gain an understanding of emerging digital technologies and their potential applications in addressing societal challenges 2. Apply design thinking methodologies to identify user needs, define project requirements, and develop innovative solutions 3. Develop technical skills in software development, data analysis, and digital prototyping thinking power 4. Collaborate effectively in interdisciplinary teams to design, implement, and evaluate digital solutions 5. Demonstrate proficiency in project management techniques, including planning, budgeting, and resource allocation				
<b>Course Learning Outcomes (CLO):</b>				<b>Students would be able to:</b> 1. Gain an understanding of emerging digital technologies and their potential applications in addressing societal challenges 2. Apply design thinking methodologies to identify user needs, define project requirements, and develop innovative solutions 3. Develop technical skills in software development, data analysis, and digital prototyping 4. Collaborate effectively in interdisciplinary teams to design, implement, and evaluate digital solutions 5. Demonstrate proficiency in project management techniques, including planning, budgeting, and resource allocation				

### Course Contents/Syllabus:

Descriptors/Topics	CLO	Hours
<b>UNIT I</b>		
<b>Introduction to Digital Innovation</b> Overview of course objectives, expectations, and project guidelines. Introduction to design thinking and user-centered design principles. Case studies of innovative digital solutions and their impact	CLO 1	10
<b>UNIT II</b>		
<b>Needs Assessment and Solution Design</b> Methods for conducting user research and defining project requirements. Ideation and concept generation techniques for digital solutions. Prototyping and user testing methodologies	CLO 2	

*Danda*

UNIT III		
<b>Technology Selection and Development</b> Overview of emerging digital technologies, including AI, IoT, and blockchain. Introduction to programming languages and development frameworks. Hands-on workshops on software development and digital prototyping tools	<b>CLO 3</b>	<b>10</b>
UNIT IV		
<b>Project Planning and Management</b> Project scoping, goal setting, and stakeholder analysis. Techniques for project planning, scheduling, and risk management. Budgeting and resource allocation for digital innovation projects	<b>CLO 4</b>	<b>10</b>
UNIT V		
<b>Implementation and Testing</b> Agile development methodologies and iterative prototyping. Quality assurance and testing strategies for digital solutions. Iterative feedback and refinement based on user testing	<b>CLO 5</b>	<b>10</b>
<b>Evaluation and Impact Assessment</b> Methods for evaluating the usability, effectiveness, and scalability of digital solutions. Data analysis techniques for measuring project outcomes and impact. Documentation and reporting of project findings and recommendation	<b>CLO 6</b>	<b>10</b>
<b>Total Hours</b>		<b>30</b>

#### Assessment

1. Project Proposal: Written proposal outlining the project scope, objectives, and methodology (20%)
2. Project Implementation: Development and implementation of the digital solution, including documentation and code repository (30%)
3. Final Report: Written report summarizing the project process, outcomes, and impact assessment (30%)
4. Presentation: Oral presentation of project findings and demonstration of the digital solution (20%)

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 4</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Applied Statistical Techniques</b>			<b>Course Code/ Course Type</b>		<b>UBTDS215/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite: 1. Basic statistical concepts								
<b>Course Objectives (CO):</b>			<b>The the objective of Applied Statistical Techniques are:</b> 1. To familiarize the students with advanced techniques in Statistics 2. To acquire knowledge of techniques of advanced level of sampling & estimation 3. To apply tests of hypothetical techniques and its applications that would enhance analytical thinking power 4. To learn the where and how to apply parametric & non-parametric tests with applications 5. Compare parametric and non-parametric inference					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Identify the advanced terms in statistics 2. Explain the estimation & its techniques 3. Apply knowledge of hypothesis techniques to test large and small samples  4. Apply non-parametric tests on practical situations 5. Analyze parametric and non-parametric inference					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Sampling Techniques</b> Random sampling, Sampling from finite and infinite populations, with and without replacement, central limit theorem, Standard error of sampling, Sampling distribution of sample mean and proportion	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Estimation</b> Introduction, Types of estimation, Interval estimation, Point estimation: Maximum likelihood function, Method of moments, Criteria for good estimates: Unbiasedness, Consistency, Sufficiency by Neyman factorization theorem	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>Test of Hypothesis-II</b> Introduction, Hypothesis, Simple and composite hypothesis, Type I and Type II errors, Level of significance, Critical region, Student's-t test, Z-test	<b>CLO 3</b>	<b>9</b>
<b>UNIT IV</b>		
<b>Test of Hypothesis-II</b> Test of hypothesis for small & large sample by Chi-Square distribution, Student's-t distributions, F-distributions. Degree of freedom, Analysis of variance (ANOVA): one-way, two-way (without interactions), P-Value.	<b>CLO 4</b>	<b>9</b>

UNIT V		
Nonparametric Inference Non-parametric Inference, order statistics, Tolerance region, Sign test, Mann-Whitney test, Wilcoxon signed rank test, Spearman's rank correlation test, Chi-square test	CLO 5	9
Total Hours		45

## Learning Resources:

### Text Books:

1. Erwin Kreyszig, Advanced Engineering Mathematics, 10th Edition, John Wiley & Sons, 2014.
2. Hugh Neill, Trigonometry: A complete Introduction, John Murray Learning, 2018.
3. George B. Thomas, Jr and Ross L. Finney, Calculus and Analytical Geometry, 9th Edition, 1998

### Reference Books:

1. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 44th Edition, 2010
2. Ron Larson, Trigonometry, Brooks/Cole, 9th Edition, 2013.
3. Robert E, Moyer, Trigonometry, Mc. Graw Hill, Addison-Wesely, 4th Edition, 2009.

Pre-Requisite: 1. Computer Networks and Security								
<b>Course Objectives (CO):</b>			<b>The the objective of Internet of Things are:</b> 1. To comprehend fundamentals of Internet of Things (IoT) 2. To learn advances in IOT 3. To learn methodologies for IoT application development 4. To learn the IoT protocols, cloud platforms and security issues in IoT 5. To learn real world application scenarios of IoT along with its societal and economic impact using case studies and real time examples					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Comprehend the fundamentals and need of IOT. 2. Apply IoT enabling technologies for developing IoT systems 3. Apply design methodology for designing and implementing IoT applications 4. Analyze IoT protocols for making IoT devices communication 5. Design cloud based IoT systems					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Internet of Things: Concepts</b> Introduction to Internet of Things (IoT): Definition, Characteristics of IoT, Vision, Trends in Adoption of IoT, IoT Devices, IoT Devices Vs Computers, Societal Benefits of IoT, Technical Building Blocks. <b>Physical Design of IoT:</b> Sensors and Actuators, Need of Analog / Digital Conversion. <b>Logical Design of IoT:</b> IoT functional blocks, Applications in IoT.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>IoT: Design Methodology</b> IoT Design Methodology: Steps, Basics of IoT Networking, Internet Structure, Connectivity Technologies, IoT Communication Models, Four pillars of IoT: M2M, SCADA, WSN, RFID.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>IoT Protocols:</b> Sensor Networks, Protocol Standardization for IoT, M2M and WSN Protocols, RFID Protocol, Modbus Protocol, Zigbee Architecture. IP based Protocols: MQTT (Secure), 6LoWPAN, LoRa	<b>CLO 3</b>	<b>9</b>

*Danda*

UNIT IV		
<b>Cloud Platforms for IoT:</b> Software Defined Networking, Introduction to Cloud Storage Models, Communication API. WAMP: AutoBahn for IoT, Xively Cloud for IoT. Python Web Application, Amazon Web Services for IoT, SkyNet IoT Messaging Platform, RESTful Web Service, GRPC,SOAP.	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Security in IoT:</b> Introduction, Vulnerabilities of IoT, Security Requirements, Challenges for Secure IoT, Threat Modeling. Key elements of IoT Security: Identity establishment, Access control, Data and message security, Non-repudiation and availability, Security model for IoT, Challenges in designing IOT applications	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 4</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Digital Image Processing</b>			<b>Course Code/ Course Type</b>		<b>UBTDSOE207/OE-II</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	

Pre-Requisite:

1. Digital Signal Processing

**Course Objectives (CO):**

**The objective of Digital Image Processing are:**

1. Understand the fundamentals of digital images, human visual system, image representation, and basic operations.
2. Apply spatial and frequency domain techniques for image enhancement and restoration.
3. Analyze image compression methods including lossless and lossy techniques.
4. Implement image segmentation and morphological operations for object detection and analysis.
5. Extract and describe image features using boundary, shape, and regional descriptors for pattern recognition.

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Understand and apply basic concepts of digital image processing, image representation, and color models.
2. Apply and analyze image enhancement and restoration techniques in spatial and frequency domains.
3. Implement and evaluate lossless and lossy image compression methods and standards.
4. Analyze and apply image segmentation and morphological operations for feature extraction.
5. Design and evaluate image restoration and description techniques using features and statistical methods.

**Course Contents/Syllabus:**

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Digital Image Processing:</b> Introduction, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Sampling and Quantization, Representing Digital Images (Data structure), Some Basic Relations, Human Visual System, Sampling and Quantization, Representing digital images, Spatial and gray level resolution, Image file formats, Basic relationships between pixels, Distance Measures. Basic operations on images – image addition, subtraction, logical operations, scaling, translation, rotation. Image Histogram. Color fundamentals and models – RGB, HSI, YIQ.	<b>CLO 1</b>	<b>9</b>

*Dan*

Descriptors/Topics	CLO	Hours
<b>UNIT II</b>		
<b>Image Enhancement in Spatial Domain:</b> Some Basic Gray Level Transformations, Histogram Processing, Enhancement using Arithmetic and Logic Operations. Spatial domain enhancement: Point operations – Log transformation, Power-law transformation, Piecewise linear transformations, Histogram equalization. Filtering operations – Image smoothing, Image sharpening. Frequency domain enhancement: 2D DFT, Smoothing and Sharpening in frequency domain. Homomorphic filtering. Restoration: Noise models, Restoration using Inverse filtering and Wiener filtering.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>Image Compression:</b> Types of redundancy, Fidelity criteria, Lossless compression – Run length coding, Huffman coding, Bit-plane coding, Arithmetic coding. Introduction to DCT, Wavelet transform. Lossy compression – DCT based compression, Wavelet based compression. Image and Video Compression Standards – JPEG, MPEG.	<b>CLO 3</b>	<b>9</b>
<b>UNIT IV</b>		
<b>Image Segmentation and Morphological Operations:</b> Image Segmentation: Point detection, Line detection, Edge Detection – First order derivative (Prewitt and Sobel), Second order derivative – LoG, DoG, Canny. Edge linking, Hough Transform, Thresholding – Global and Adaptive, Otsu’s Method. Region Growing, Region Splitting and Merging. Morphological Operations: Dilation, Erosion, Opening, Closing, Hit-or-Miss transform, Boundary Detection, Thinning, Thickening, Skeleton.	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
<b>Image Restoration and Description:</b> Image Restoration, Degradation model, Properties, Noise models, Mean Filters, Order Statistics, Adaptive filters, Band reject Filters, Band pass Filters, Notch Filters, Optimum Notch Filtering, Inverse Filtering, Wiener filtering. Representation: Chain codes, Polygonal approximation, Signatures. Boundary Descriptors, Shape numbers, Fourier Descriptors, Statistical moments. Regional Descriptors – Topological and Texture. Principal Components for Description.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

Pre-Requisite:								
1. Basic knowledge of Python programming and HTML								
<b>Course Objectives (CO):</b>			<b>The the objective of Web Development Using Django are:</b>					
			<ol style="list-style-type: none"> <li>1. To introduce the fundamentals of web development using the Django framework</li> <li>2. To provide hands-on experience in building and managing web applications with Django</li> <li>3. To equip students with knowledge of database migrations and data modeling in Django</li> <li>4. To develop skills in creating dynamic, interactive, and responsive web applications</li> <li>5. To integrate front-end and back-end development within the Django framework</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Build and deploy web applications using the Django framework</li> <li>2. Design and manage databases with Django's ORM and migrations</li> <li>3. Implement user authentication and authorization in Django applications</li> <li>4. Integrate static files, templates, and front-end components into Django projects.</li> <li>5. Use Django to develop scalable and maintainable full-stack web applications</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Django Framework</b> Overview of Web Development and Django –(Introduction to the MVC (Model-View-Controller) Pattern,Installing Django and Setting Up the Environment),Creating a Django Project –(Django Project and App Structure,Django Settings and Configuration),URL Mapping and Views –(Defining URLs and Views,Dynamic URLs and Path Converters),Handling HTTP Requests and Responses-(Hands-on Exercise: Create a basic Django project with URL routing and simple views).	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Working with Models and Databases</b> Django ORM (Object-Relational Mapping) –(Defining Models and Fields,Querying and Managing Data with ORM),Database Migrations –(Creating and Applying Migrations,Handling Schema Changes),Relationships in Django Models –(One-to-Many and Many-to-Many Relationships,Using Foreign Keys), Integrating Databases –(Setting Up SQLite/PostgreSQL with Django Hands-on Exercise: Build and manage a database schema using Django ORM and migrations.).	<b>CLO</b>	

UNIT III		
<b>Django Templates and Static Files</b> Introduction to Django Templates –(Using Template Tags and Filters,Template Inheritance), Working with Static Files –(Managing CSS, JavaScript, and Images in Django,Using the Static Files App),Dynamic Data in Templates –(Passing Context to Templates,Displaying Query Results in HTML),Form Handling in Django-(Creating and Processing Forms,Form Validation and Customization,Hands-on Exercise: Design a Django app with dynamic templates and static assets integration.).	<b>CLO 3</b>	<b>6</b>
UNIT IV		
<b>Advanced Django Features</b> User Authentication and Authorization-(User Model and Authentication Flow,Managing Permissions and Groups),Working with Django Admin-(Customizing the Django Admin Interface,Adding Custom Admin Actions),Middleware in Django –(Overview of Middleware and Its Role,Writing Custom Middleware),Building APIs with Django-(Introduction to Django REST Framework,Creating Basic RESTful APIs,Hands-on Exercise: Implement user authentication and build a REST API for a Django app.).	<b>CLO 4</b>	<b>6</b>
UNIT V		
<b>Deployment and Capstone Project</b> Deploying Django Applications –(Preparing the Project for Deployment,Deploying on Platforms like Heroku or AWS),Scaling and Maintaining Django Projects –( Caching, Load Balancing, and Debugging,Logging and Monitoring Django Applications),Capstone Project-(Design and Develop a Full-Stack Web Application,Integrate Authentication, Database, and RESTful API,Deploy and Demonstrate the Completed Application).	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

<b>Foundations of Cybersecurity</b> Introduction to Cybersecurity (Core Concepts: CIA Triad (Confidentiality, Integrity, Availability, Common Threats and Attacks (Phishing, Malware, Ransomware) , Understanding Security Policies (Risk Management and Compliance, Importance of Security Awareness), Fundamentals of Linux Security ( Linux Permissions and File Ownership, Best Practices for Linux Security), Case Studies in Cybersecurity(Hands-on Exercise: Implement file permissions and security configurations in a Linux environment).	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		

*Danda*

<b>Linux System Administration and Security Basics</b> (Based on Red Hat RH134 - Red Hat System Administration II) Managing Users and Groups (User Authentication and Password Policies, Configuring Sudo for Privileged Access), File System Security (Access Control Lists (ACLs), Encrypting File Systems with LUKS. Process Management and Security (Understanding Process Priorities, Managing Process Permissions. Service Hardening ( Disabling Unnecessary Services, Configuring System Logs for Security Audits) Hands-on Exercise: Harden a Linux system by securing user accounts and encrypting data.	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>Securing Network Connections in Linux</b> Introduction to Network Security (Understanding Firewalls and iptables/nftables, Basics of SELinux and AppArmor). Configuring Secure Network Services (SSH Security: Keys, Configurations, and Best Practices, Configuring Secure Web and FTP Services), Secure Remote Access (VPN Configuration Basics, Managing Certificates and OpenSSL), Troubleshooting Network Issues (Analyzing Network Traffic with Wireshark, Using tcpdump for Incident Analysis). Hands-on Exercise: Set up a secure SSH server and configure firewall rules.	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Advanced Linux Security and Incident Response</b> User Monitoring and Logging in Linux (Configuring rsyslog and journalctl, Setting Up Intrusion Detection Systems (IDS) ), Security Automation ( Using Bash Scripts for Security Monitoring , Introduction to Ansible for Security Automation. Incident Response in Linux (Analyzing Logs for Security Incidents, Isolating and Mitigating Threats), Forensics in Linux (Basics of Memory and Disk Forensics, Tools for Data Recovery and Analysis). Hands-on Exercise: Detect and analyze a simulated security incident in a Linux environment.	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Capstone Project and Integration</b> Comprehensive System Hardening ( Applying Learned Security Measures to a Linux System, Securing Web Servers, Databases, and Applications), Configuring Linux for Secure Networking (Implementing Best Practices for Network Security, Advanced Firewall Configurations). Capstone Project ( Design and Implement Secure Linux Environment, Document and Present Security Strategies and Configurations), Future Directions ( Preparing for Advanced Certifications (RHCE, CompTIA Security+), Emerging Trends in Linux Security and Cybersecurity. Capstone Project Presentation: Deploy a secure Linux server with end-to-end security measures.	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. "Red Hat RH124: Red Hat System Administration I"
2. "Red Hat DO101: Introduction to OpenShift Applications".

### Reference Books:

1. "Practical Guide to Linux Commands, Editors, and Shell Programming" by Mark G. Sobell
2. "Linux Bible" by Christopher Negus
3. "Cybersecurity for Beginners" by Raef Meeuwisse

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 4</b>		<b>Level: UG/PG</b>	
<b>Course Name:</b>		<b>German A1.2</b>			<b>Course Code/ Course Type</b>		<b>UFL 202 A/AEC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	
Pre-Requisite:								
1. Can understand and use familiar, everyday expressions and very simple sentences aimed at satisfying specific needs								
<b>Course Objectives (CO):</b>			<b>The the objective of German A1.2 are:</b>					
			<ol style="list-style-type: none"> <li>1. To get along with a basic vocab</li> <li>2. To understand German day to day culture</li> <li>3. Can communicate in routine situations</li> <li>4. To be able to have a direct exchange of information about familiar matters</li> <li>5. To describe own surroundings</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Communicate in the areas of immediate importance</li> <li>2. Able to frame simple sentences in formal conversation</li> <li>3. Translate simple sentences from English to the German language and vice-versa</li> <li>4. Construct a dialogue, in the German language, for basic human interactions in a social context</li> <li>5. Take part in an interaction relating to basic conversation</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Kontakte</b> planning of letter writing, ramification of Letter, writing and understanding, discussion about language learning, find information from texts, understand conversations on various topics, texts related to office life Grammar – Usage of Articles and Prepositions	<b>CLO 1</b>	<b>10</b>
<b>UNIT II</b>		
<b>MeineWohnung</b> Understand home advertisements, describe house, how to reply invitations, how to express ‘likes and dislikes’, speak about different forms of living, how to write a text on house Grammar – Adjectives	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>AllesArbeit?</b> Talk about daily routine, talk about past, understand job advertisements, understand blogs on jobs, express opinions about jobs, prepare telephonic dialogues, speak about jobs ,Grammar – Past tense, Sentence connectors	<b>CLO 3</b>	<b>9</b>

*Danda*

UNIT IV		
<b>Kleidung und Mode</b> Speak about cloths and shopping, lead a discussion during cloths shopping, discussion in departmental store, understand and research information about Berlin, Grammar – Separable and non-separable verbs	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Gerund und munter &amp; Ab in den Urlaub</b> Learn body parts, Health related dialogue, City orientation, Travel reports, discussion regarding different travel destinations and weather Grammar – Imperative, Time adverbs	<b>CLO 5</b>	<b>8</b>
<b>Total Hours</b>		<b>45</b>

<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	
Pre-Requisite:								
<b>Course Objectives (CO):</b>				<b>The objectives of Constitution of India are:</b>				
				<ol style="list-style-type: none"> <li>1. To familiarize the students with the key elements of the Indian constitution</li> <li>2. To enable students to grasp the constitutional provisions and values</li> <li>3. To acquaint the students with the powers and functions of various constitutional offices and institutions.</li> <li>4. To make students understand the basic premises of Indian politics</li> <li>5. To make students understand the role of constitution and citizen-oriented measures in a democracy</li> </ol>				
<b>Course Learning Outcomes (CLO):</b>				<b>Students would be able to:</b>				
				<ol style="list-style-type: none"> <li>1. Analyze the basic structure of Indian Constitution</li> <li>2. Remember their Fundamental Rights, DPSP's and Fundamental Duties (FD's) of our constitution</li> <li>3. know about our Union Government, political structure &amp; codes, procedures</li> <li>4. Elaborate our State Executive &amp; Elections system of India</li> <li>5. Access the Amendments and Emergency Provisions, other important provisions given by the constitution</li> </ol>				

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Indian Constitution</b> The Necessity of the Constitution, The Societies before and after the Constitution adoption. Introduction to the Indian constitution, The Making of the Constitution, The Role of the Constituent Assembly. The Preamble of Indian Constitution & Key concepts of the Preamble. Salient features of India Constitution	<b>CLO 1</b>	<b>8</b>
<b>UNIT II</b>		
<b>FR's, FD's and DPSP's</b> Fundamental Rights and its Restriction and limitations in different Complex Situations. Directive Principles of State Policy (DPSP) and its present relevance in our society with examples. Fundamental Duties and its Scope and significance in Nation building	<b>CLO 2</b>	<b>5</b>
<b>UNIT III</b>		
<b>Governance and Constitution</b> 1. Federalism in India - Features, Local Government -Panchayats -Powers and functions; 73rd and 74th amendments, Election Commission - Composition, Powers and Functions; Electoral Reforms, Citizen oriented measures - RTI and PIL - Provisions and significance	<b>CLO 3</b>	<b>5</b>
<b>UNIT IV</b>		

*[Handwritten Signature]*

<b>Union Executive</b> Parliamentary System, Union Executive – President, Prime Minister, Union Cabinet, Parliament - LS and RS, Parliamentary Committees, Important Parliamentary Terminologies. Supreme Court of India, Judicial Reviews and Judicial Activism.	<b>CLO 4</b>	<b>5</b>
<b>UNIT V</b>		
<b>IState Executive &amp; Elections, Amendments and Emergency Provisions</b> State Executive, Election Commission, Elections & Electoral Process. Amendment to Constitution (How and Why) and Important Constitutional Amendments till today. Emergency Provisions	<b>CLO 5</b>	<b>7</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. “Constitution of India” (for Competitive Exams) - Published by Naidhruva Edutech Learning Solutions, Bengaluru. – 2022
2. “Engineering Ethics”, M.Govindarajan, S.Natarajan, V.S.Senthilkumar, Prentice –Hall, 2004

### Reference Books:

1. “SamvidhanaOdu” - for Students & Youths by Justice HN NagamohanDhas, Sahayana, kerekon
2. “Constitution of India, Professional Ethics and Human Rights” by Shubham Singles, Charles E. Haries, and et al: published by Cengage Learning India, Latest Edition – 2019.
3. “Introduction to the Constitution of India”, (Students Edition.) by Durga Das Basu (DD Basu): Prentice –Hall, 2008
4. “The Constitution of India” by Merunandan K B: published by Merugu Publication.

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 4</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>UHV-II: Understanding Harmony</b>			<b>Course Code/ Course Type</b>		<b>ACUHV201/AC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	
Pre-Requisite: 1. NIL								
<b>Course Objectives (CO):</b>				<b>The objectives of Understanding Harmony are:</b> 1. To train the student for Development of a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence 2. To comprehend (or develop clarity) the harmony in the human being, family, society and nature/existence 3. To strengthen self-reflection. 4. To infuse a sense of commitment and courage to act 5. To understand Holistic Understanding of Harmony on Professional Ethics.				
<b>Course Learning Outcomes (CLO):</b>				<b>Students would be able to:</b> 1. Analyze the most important requirement for any human being. 2. Apply correct appraisal of Physical needs, meaning of Prosperity in detail 3. Analyze salient values in relationship, Friends and Foes, Empathy, False Prestige. 4. Develop holistic perception of harmony at all levels of existence 5. Apply the Holistic Understanding of Harmony on Professional Ethics				

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Course Introduction - Need, Basic Guidelines, Content and Process for Value Education</b> 1. Purpose and motivation for the course, recapitulation from Universal Human Values-I 2. Self-Exploration-what is it? - Its content and process; Personality Traits-Self Excellence, Natural Acceptance and Experiential Validation- as the process for self-exploration, Adaptability, Belief and Understanding- Self discipline 3. Continuous Happiness and Prosperity- A look at basic Human Aspirations 4. Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority 5. Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario 6. Method to fulfil the above human aspirations: understanding and living in harmony at various levels.	<b>CLO 1</b>	<b>8</b>
<b>UNIT II</b>		

*Danda*

<b>Understanding Harmony in the Human Being - Harmony in Myself:</b> 1. Understanding human being as a co-existence of the sentient "I" and the material "Body" 2. Understanding the needs of Self ("I") and "Body" - happiness and physical facility 3. Understanding the Body as an instrument of "I" (I being the doer, seer and enjoyer)- Habits and Hobbies, SWOT Analysis (Activity) 4. Understanding the characteristics and activities of "I" and harmony in "I" – Dalai Lamas Tibetan Personality Test – Dr. Menninger's Psychometric Test. 5. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail	<b>CLO 2</b>	<b>5</b>
<b>UNIT III</b>		
<b>Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship</b> 1. Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship 2. Understanding the meaning of Trust; Difference between intention and competence 3. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship, Friends and Foes, Empathy, False Prestige.	<b>CLO 3</b>	<b>5</b>
<b>UNIT IV</b>		
<b>Understanding Harmony in the Nature and Existence - Whole existence as Coexistence:</b> 1. Understanding the harmony in the Nature and its Equanimity, Respect for all, Nature as Teacher 2. Interconnectedness and mutual fulfillment among the four orders of nature- recyclability and self-regulation in nature 3. Understanding Existence as Co-existence of mutually interacting units in all- pervasive space 4. Holistic perception of harmony at all levels of existence.	<b>CLO 4</b>	<b>5</b>
<b>UNIT V</b>		
<b>Implications of the above Holistic Understanding of Harmony on Professional Ethics</b> 1. Natural acceptance of human values 2. Definitiveness of Ethical Human Conduct 3. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order 4. Vision for the Holistic alternatives, UHVs for entrepreneurship	<b>CLO 5</b>	<b>7</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. Human Values and Professional Ethics by R R Gaur, R Sangal, G P Bagaria, Excel Books, New Delhi, 2010
2. Jeevan Vidya: Ek Parichaya, A Nagaraj, Jeevan Vidya Prakashan, Amarkantak, 1999
3. Human Values, A.N. Tripathi, New Age Intl. Publishers, New Delhi, 2004.

### Reference Books:

1. The Story of My Experiments with Truth - by Mohandas Karamchand Gandhi
2. Small is Beautiful - E. F Schumacher
3. Slow is Beautiful - Cecile Andrews
4. The Story of Stuff (Book).

# COURSE SYLLABUS

**B.TECH COMPUTER SCIENCE & ENGINEERING  
(AI & DATA SCIENCE)**

**SEMESTER-V**

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 5</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Theory of Computation</b>			<b>Course Code/ Course Type</b>		<b>UBTDS319/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>1</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	

Pre-Requisite:

1. Discrete Mathematics
2. Digital Electronics & Logic Design

<b>Course Objectives (CO):</b>	<p><b>The objectives of Theory of Computation are:</b></p> <ol style="list-style-type: none"> <li>1. To give an overview of the theoretical foundations of computer science from the perspective of formal languages</li> <li>2. To illustrate finite state machines to solve problems in computing</li> <li>3. To familiarize Regular grammars, context free grammar</li> <li>4. To propose computation solutions using Turing machines</li> <li>5. To analyze the problem types</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Elaborate basic concepts of formal languages of finite automata techniques</li> <li>2. Develop formal mathematical methods to prove properties of languages, grammars and automata</li> <li>3. Able to construct context free grammar for various languages</li> <li>4. Applying normal form techniques push down automata and Turing Machines for any language</li> <li>5. Illustrate the decidability or undecidability of various problems</li> </ol>

### Course Contents/Syllabus:

Descriptors/Topics	CLO	Hours
<b>UNIT I</b>		
<b>FORMAL LANGUAGE THEORY AND FINITE AUTOMATA:</b> Introduction, Basic concepts, Languages, Finite State Machine, Deterministic Finite Automata, Non-Deterministic Finite Automata, Equivalence of Deterministic and Nondeterministic Finite Automata, Minimization of Deterministic Finite Automata, Finite Automata with Epsilon Transitions, Eliminating Epsilon transitions, Introduction to Mealy and Moore Machine.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>REGULAR EXPRESSIONS:</b> Introduction, Identities of Regular Expressions, Conversion of Regular Expressions to Finite Automata, Arden's Theorem, Closure properties of regular languages, Regular Grammar with Finite Automata., Pumping Lemma for Regular Languages.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>CONTEXT FREE LANGUAGE AND GRAMMAR:</b> Context Free Language, Context Free Grammar - Derivation Trees, Sentential Forms, Leftmost and Rightmost derivations of Strings., Ambiguity in CFG's, Simplification of CFG, Chomsky Normal Form, Griebach Normal Form, Chomsky Hierarchy.	<b>CLO 3</b>	<b>9</b>

*Danda*

UNIT IV		
<b>PUSHDOWN AUTOMATA:</b> Definition, Model, Acceptance of CFL, Acceptance by Final State and Acceptance by Empty stack and its Equivalence, Equivalence of CFG and PDA. <b>TURING MACHINES (TM):</b> Formal definition and behavior, Languages of a TM, TM as accepters, and TM as a computer of integer functions, Types of TMs.	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>COMPUTABILITY AND COMPLEXITY THEORY:</b> Decidable and Un-decidable Problems, Undecidable Problems that are Recursively Enumerable, P Class and NP Class with examples, P vs NP Problems, NP-Complete NP-Hard Problems.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. John E. Hopcroft, Rajeev Motwani, Jeffrey D. Ullman (2007), Introduction to Automata Theory Languages and Computation, 3rd edition, Pearson Education, India
2. J. Martin, —Introduction to Languages and the Theory of Computation, Third Edition, TMH, 2007

### Reference Books:

1. K. L. P Mishra, N. Chandrashekar (2003), Theory of Computer Science-Automata Languages and Computation, 2nd edition, Prentice Hall of India, India
2. Micheal Sipser, —Introduction of the Theory and Computation, Thomson Brokecole, 3rd Edition, 2013

<b>Course Name:</b>		<b>Artificial Intelligence Techniques</b>			<b>Course Code/ Course Type</b>		<b>UBTDS320/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite:								
<ol style="list-style-type: none"> <li>1. Programming in C/C++ or Python</li> <li>2. Data Structures and Algorithms</li> <li>3. Discrete Mathematics / Logic</li> </ol>								
<b>Course Objectives (CO):</b>			<b>The objectives of Artificial Intelligence Techniques are:</b>					
			<ol style="list-style-type: none"> <li>1. Understand the structure and behavior of intelligent agents</li> <li>2. Apply various search techniques for problem-solving in AI</li> <li>3. Represent knowledge using logic and perform inference using reasoning methods</li> <li>4. Analyze and develop AI planning systems</li> <li>5. Demonstrate the architecture of expert systems and fuzzy-based reasoning</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Formulate AI problems using appropriate search algorithms and evaluate their efficiency</li> <li>2. Implement propositional and first-order logic for knowledge representation</li> <li>3. Solve planning problems using STRIPS and other AI planning techniques</li> <li>4. Design simple expert systems incorporating rule-based and fuzzy logic</li> <li>5. Relate AI techniques to real-world domains like robotics, NLP, and healthcare</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
Introduction to Artificial Intelligence: Definition and Goals of AI: , History and Milestones in AI, Strong vs Weak AI, Symbolic vs Statistical AI Turing Test, Problem Definition -Production systems, Control strategies, Search strategies. Problem characteristics, Production system characteristics.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
Problem Formulation: States, Goals, Actions, Transition Models, Uninformed Search Algorithms: BFS, DFS, Uniform Cost Search, Depth-Limited Search, Iterative Deepening, Informed Search Algorithms: Best-First Search, A* Search, Heuristics (Admissibility, Consistency), Game Playing: Minimax, Alpha-Beta Pruning, Constraint Satisfaction Problems.	<b>CLO</b>	

*Danda*

<b>UNIT III</b>		
Knowledge Representation and Reasoning: Propositional Logic: Syntax, Semantics, Inference, First Order Logic (FOL): Syntax, Semantics, Quantifiers, Forward and Backward Chaining, Resolution and Unification, Knowledge-Based Agents and Rule-Based Systems.	<b>CLO 3</b>	<b>9</b>
<b>UNIT IV</b>		
Planning and Decision Making: Classical Planning: STRIPS, Planning Graphs, Forward vs Backward State-Space Search, Bayes Theorem, Certainty factors, Dempster-Shafer Theory, Bayesian Belief Networks.	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
Expert Systems and Applications: Structure of Expert Systems: Knowledge Base, Inference Engine, Development Life Cycle of Expert Systems, Case Studies: MYCIN, DENDRAL, Fuzzy Logic Basics: Fuzzy Sets, Membership Functions, Fuzzy Inference Systems, Applications in Robotics, Healthcare, Finance, NLP.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

<b>Pre-Requisite:</b> <ol style="list-style-type: none"> <li>Control Structures &amp; Functions in Python/Java</li> <li>Familiarity with Search Algorithms</li> <li>Basic OOP Concepts</li> </ol>								
<b>Course Objectives (CO):</b>			<b>The objectives of Artificial Intelligence Techniques Laboratory are:</b> <ol style="list-style-type: none"> <li>Implement AI problem-solving techniques such as uninformed and informed search</li> <li>Simulate intelligent agent behaviors through basic programming</li> <li>Develop knowledge-based reasoning systems using propositional and first-order logic</li> <li>Apply AI planning and rule-based systems in simulations</li> <li>Demonstrate fuzzy inference and basic expert systems for decision-making</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> <ol style="list-style-type: none"> <li>Write programs to solve classical AI problems using search algorithms</li> <li>Simulate game-playing strategies using adversarial algorithms like Minimax</li> <li>Represent knowledge using logic and implement forward/backward chaining</li> <li>Create fuzzy logic-based controllers using defined rule sets</li> <li>Design and test simple expert systems with inference engines</li> </ol>					

### Practical Plan:

Practical Number	Practical Title	Week Number	Details	CLO	Hours
1	Practical 1	1	1. Write a program to solve "Water Jug Problem".	CLO1	2
2	Practical 2	2	2. Implement Breadth-First and Depth-First search for solving puzzles (e.g., 8-puzzle, maze navigation).	CLO2	2
3	Practical 3	3	Solve the path-finding problem with heuristics (e.g., Manhattan or Euclidean)	CLO2	2
4	Practical 4	4	Solve N-Queens, Sudoku, or Map Coloring using backtracking with forward checking.	CLO3	2
5	Practical 5	5	Implement 2-player game like Tic-Tac-Toe or Connect 4 using Minimax.	CLO3	2
6	Practical 6	6,7	Encode knowledge base and evaluate queries using truth table or resolution method.	CLO4	2

7	Practical 7	8,9	Write a program to calculate Certainty Factors.	CLO4	4
8	Practical 8	10,11	Implement Bayes Theorem to computes the posterior probability.	CLO5	4
9	Practical 9	12,13	Use IF-THEN rules to simulate expert systems like medical diagnosis.	CLO5	4
10	Practical 10	14,15	Simulate a fuzzy controller (e.g., fan speed or temperature control)	CLO5	4
<b>Total Hours</b>					<b>30</b>

## Learning Resources:

### Text Books:

1. Artificial Intelligence: A Modern Approach by Stuart Russell and Peter Norvig, Pearson
2. Artificial Intelligence by Elaine Rich, Kevin Knight, Shivashankar B. Nair, McGraw-Hill

### Reference Books:

1. Prolog Programming for Artificial Intelligence by Ivan Bratko
2. Artificial Intelligence by George F. Luger, Pearson
3. AI Algorithms, Data Structures, and Idioms in Prolog, Lisp, and Java by George F. Luger

### Online Resources/E-learning Resources:

1. [NPTEL Lab-based AI Programming Course](#)
2. [AI Projects on GitHub - aima-python](#)

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 5</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Data Communication &amp; Computer Networking</b>			<b>Course Code/ Course Type</b>		<b>UBTDSPE319/PEC-I</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	

Pre-Requisite:

1. Computer Fundamentals
2. Digital Electronics (binary, signals, encoding)
3. Operating Systems (basic networking concepts)

**Course Objectives (CO):**

**The objectives of Data Communication & Computer Networking are:**

1. Understand the fundamental components, signals, and transmission aspects of data communication systems
2. Explain the OSI and TCP/IP models and the functions of each layer, focusing on the physical layer concepts including encoding, transmissions, and conversions
3. Analyze and implement protocols for reliable data link operations including error detection, flow control, and media access
4. Design and troubleshoot network layer configurations using suitable addressing, subnetting, and routing algorithms and protocols
5. Evaluate and apply concepts in transport and application layer protocols, and assess the impact of emerging trends and fundamental security in networking

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Describe and distinguish among various signal types, transmission modes, impairments, and fundamental communication limits
2. Illustrate the architecture and operations of the OSI/TCP-IP models, and demonstrate understanding of physical layer encoding, conversions, and transmission media
3. Apply data link layer protocols for error detection/correction, flow control, and demonstrate media access techniques in simulated or design scenarios
4. Solve practical problems related to IP addressing, subnetting, routing, and configuration of layer 3 protocols
5. Compare transport and application layer protocols, explain flow and congestion control, and differentiate among networking security techniques and emerging trends

*Danda*

## Course Contents/Syllabus:

Descriptors/Topics	CLO	Hours
<b>UNIT I</b>		
<b>Fundamentals of Data Communication:</b> Components of a data communication system, Types of signals: Analog vs Digital, Transmission impairments: Attenuation, Noise, Distortion, Data rate limits: Nyquist and Shannon Theorems, Transmission modes: Simplex, Half-duplex, Full-duplex	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Physical Layer and OSI Overview:</b> Physical Layer and OSI Overview): OSI reference model and TCP/IP model: architecture, layer functions, encapsulation, addressing, encoding methods: NRZ, Manchester, analog-to-digital conversion: sampling, quantization, PCM, digital-to-analog conversion: ASK, FSK, PSK, signal bandwidth and data rate relationship, transmission media: twisted pair, coaxial cable, optical fiber, wireless, line configuration: point-to-point, multipoint, physical topology: mesh, star, bus, ring, hybrid, switching techniques: circuit, packet, message switching	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>Data Link Layer:</b> framing and error detection: VRC, LRC, checksum, CRC, error correction: Hamming code, redundancy concepts, flow control mechanisms: stop-and-wait, sliding window protocols, medium access control protocols: ALOHA, CSMA/CD, CSMA/CA, token passing, polling, Ethernet IEEE 802.3: frame structure, operation principles, switches vs hubs, link-layer addressing: MAC addresses, overview of HDLC and PPP, LAN and WAN standards	<b>CLO 3</b>	<b>9</b>
<b>UNIT IV</b>		
<b>Network Layer:</b> IPv4 and IPv6 addressing: structure, address types, notations, subnetting and CIDR: concepts, calculations, routing algorithms: distance vector, link state (Dijkstra), Bellman-Ford, shortest path, flooding, broadcast, multicast, hierarchical routing, routing protocols: RIP, OSPF, BGP, ICMP, ARP, DHCP: functions and operation, datagram vs virtual-circuit switching, NAT basics, fragmentation and reassembly	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
<b>Transport, Session, Presentation, Application Layers:</b> transport layer protocols: TCP, UDP, ports and sockets, TCP flow and congestion control: sliding window, three-way handshake, slow start, introduction to session and presentation layer responsibilities, data formatting, encryption basics, application layer protocols: HTTP, FTP, DNS, SMTP, POP, IMAP, Quality of Service: metrics, mechanisms, scheduling, introduction to firewalls and basic network security concepts, emerging concepts: SDN, MPLS, cloud networking basics	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

### Learning Resources:

#### Text Books:

1. Data and Computer Communications by William Stallings, Pearson
2. Computer Networking: A Top-Down Approach by Kurose & Ross, Pearson

#### Reference Books:

1. Data Communications and Networking by Behrouz A. Forouzan, McGraw-Hill
2. Computer Networks by Andrew S. Tanenbaum and David Wetherall
3. Communication Networks: Fundamental Concepts and Key Architectures by Alberto Leon-Garcia

#### Online Resources/E-learning Resources:

1. [NPTEL: Computer Networks by IIT Kharagpur](#)

<b>Course Name:</b>		<b>Data Communication &amp; Computer Networking Laboratory</b>			<b>Course Code/ Course Type</b>		<b>UBTDSPE320/PEC-I</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
-	1	-	1	2	25	-	25	

Pre-Requisite:

1. Python Programming Language

**Course Objectives (CO):**

**The objectives of Data Communication & Computer Networking Laboratory are:**

1. Simulate and configure basic network topologies using Packet Tracer
2. Implement routing protocols and subnetting techniques
3. Configure services like DHCP, NAT, DNS, and VLANs on simulated networks
4. Analyze network behavior using tools like ping, traceroute, and Wireshark
5. Apply access control mechanisms and security configurations in network design

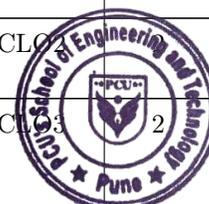

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Design and simulate LAN and WAN network scenarios using simulation tools
2. Apply static and dynamic routing protocols in multi-router environments
3. Configure and test network services such as DHCP and NAT
4. Use diagnostic tools to evaluate network performance and connectivity
5. Implement access lists and security policies in simulated environments

### Practical Plan:

Practical Number	Practical Title	Week Number	Details	CLO	Hours
1	Practical 1	1	Create a LAN with switches, routers, and PCs, Assign IP addresses and verify connectivity using ping	CLO1	2
2	Practical 2	2	Connect multiple routers and configure routing tables	CLO2	2
3	Practical 3	3	Configure RIP and OSPF; observe routing table changes	CLO3	2
4	Practical 4	4	Divide a class C network into multiple subnets, Implement subnet plan in a simulated network	CLO4	2
5	Practical 5	5	Use switches and routers to segment networks	CLO3	2
6	Practical 6	6,7	Set up a DHCP server to allocate dynamic IPs	CLO4	4

7	Practical 7	8,9	Implement Static and Dynamic NAT using a router	CLO4	4
8	Practical 8	10,11	Use Standard and Extended ACLs to permit/deny traffic	CLO5	4
9	Practical 9	12,13	Set up SSID, WPA2 security; simulate mobile client access	CLO5	4
10	Practical 10	14	Configure DNS mappings and simulate HTTP access	CLO5	2
11	Practical 11	15	Capstone Project (Smart Devices Case Study)	CLO5	2
<b>Total Hours</b>					<b>30</b>

## Learning Resources:

### Text Books:

1. Data and Computer Communications by William Stallings
2. Computer Networking: A Top-Down Approach by Kurose & Ross

### Reference Books:

1. Data Communications and Networking by Behrouz A. Forouzan
2. Cisco Networking Essentials by Troy McMillan
3. Practical Packet Tracer Labs by Gary A. Donahue (Cisco Simulation Support)

### Online Resources/E-learning Resources:

1. [Cisco Packet Tracer Labs \(NetAcad\)](#)
2. [NPTEL: Computer Networks Lab – Simulations](#)

Discuss trends such as Edge Computing, Serverless, and Ethical Cloud Design</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Cloud Computing:</b> Definition and Evolution of Cloud Computing, Cloud Characteristics: On-demand, Broad Network Access, Multi-tenancy, Traditional IT vs Cloud Computing, Cloud Service Models: IaaS, PaaS, SaaS, Deployment Models: Public, Private, Hybrid, Community	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Virtualization and Cloud Infrastructure</b> Introduction to Virtualization: Benefits and Limitations, Hypervisors: Type I vs Type II, Virtual Machines vs Containers, Virtual Networking and Storage Concepts, Virtualization in AWS, Azure, and GCP	<b>CLO 2</b>	
<b>UNIT III</b>		
<b>Cloud Storage and Computing Services</b> Cloud Storage: Block, File, and Object Storage, Introduction to Storage Services: S3, Google Cloud Storage, Azure Blob, Elastic Computing: AWS EC2, Azure VMs, Google Compute Engine, Serverless Computing: Concept, Advantages, Use Cases, Auto-scaling and Load Balancing Concepts	<b>CLO 3</b>	

UNIT IV		
<b>Cloud Platform Services and Cloud Management:</b> Platform-as-a-Service (PaaS) Overview: Elastic Beanstalk, App Engine, Azure Web Apps, Resource Provisioning and Management, Metered Billing and Cost Optimization, Cloud Monitoring and Logging (CloudWatch, Stackdriver, Azure Monitor), Cloud Migration Strategies	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Cloud Trends, Standards, and Future Directions:</b> Open Standards: OpenStack, CloudFoundry, Kubernetes (intro only), Cloud Design Patterns: Scalability, Redundancy, Fault Tolerance, Edge Computing and Fog Computing Overview, Cloud Use Cases: Education, Healthcare, IoT, Smart Cities, Ethical Issues: Vendor Lock-in, Data Ownership, Environmental Impact	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

### Learning Resources:

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>		<b>Semester: 5</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Foundation of Cloud Computing Laboratory</b>		<b>Course Code/ Course Type</b>		<b>UBTDSPE322/PEC-I</b>	
<b>Course Pattern:</b>		<b>2025</b>		<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>				<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>
-	1	-	1	2	25	-	25

Pre-Requisite:

1. Virtual Machine Usage (VirtualBox, EC2)
2. Basic CLI (Linux/AWS CLI/Azure CLI)
3. File Management in OS & Web Console Operations

**Course Objectives (CO):**

**The objectives of Foundation of Cloud Computing Laboratory are:**

1. Configure and manage virtual machines and storage on cloud platforms
2. Use cloud service provider tools (AWS, Azure, GCP) to deploy basic applications
3. Implement cloud services like object storage, serverless functions, and load balancers
4. Monitor resources, set billing alerts, and understand usage metrics
5. Demonstrate secure and optimized use of cloud infrastructure

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Launch virtual machines and connect them using SSH in cloud environments
2. Work with cloud-based object storage systems for file hosting and delivery
3. Deploy and test simple applications using serverless compute services
4. Utilize monitoring tools to observe performance and generate cost estimates
5. Perform basic IAM configurations for access control and resource protection

### Practical Plan:

Practical Number	Practical Title	Week Number	Details	CLO	Hours
1	Set Up and Explore a Cloud Console (AWS / Azure / GCP)	1	Create a free account, familiarize with dashboard, regions, availability zones	CLO1	2
2	Provision and Connect to a Virtual Machine (EC2 / Azure VM / GCE)	2	Choose OS, set CPU/RAM/storage, connect via SSH	CLO1	2
3	Create and Configure Object Storage (e.g., S3 / Blob / GCS)	3	Create bucket, upload files, set permissions, generate public URLs	CLO1	2

*Danda*

4	Launch a Web Server on a Cloud VM (Apache/Nginx)	4	Install and host a static HTML page using a cloud-based instance	CLO2	2
5	Use Auto-Scaling Groups and Elastic Load Balancers (Conceptual or Live)	5	Demonstrate traffic balancing and instance scalability (demo possible via diagrams)	CLO3	2
6	Implement Identity and Access Management (IAM)	6	Create users/roles/policies and assign permission scopes	CLO3	4
7	Monitor and Log Cloud Resources (e.g., CloudWatch / Azure Monitor)	7	View usage statistics, logs, set alerts for CPU/memory thresholds	CLO4	4
8	Use a CLI Tool for Cloud Management (AWS CLI / Azure CLI / gcloud)	8	Launch, stop, and inspect instances or storage via terminal	CLO4	4
9	Deploy a Serverless Function (Lambda / Azure Function / GCP Function)	9	Write a simple "Hello Cloud" file processing function	CLO5	4
10	Create a Custom Virtual Private Cloud (VPC)	10	Define subnets, security groups, internet gateways (visually or via CLI)	CLO5	04
<b>Total Hours</b>					<b>30</b>

## Learning Resources:

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 5</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Data Science and Analytics</b>			<b>Course Code/ Course Type</b>		<b>UBTDS322/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>20</b>	<b>30</b>	<b>-</b>	

Pre-Requisite:

1. Basics of Statistics & Probability
2. Introduction to Programming (preferably Python)
3. Data Handling using Excel/CSV

**Course Objectives (CO):**

**The objectives of Data Science and Analytics are:**

1. Recognize and explain the foundational concepts, workflow, and lifecycle of data science and analytics, including the use of R and its core packages.
2. Import, organize, and manipulate various data formats and structures, handling tasks such as cleaning, transformation, and basic exploratory analysis using R.
3. Create and interpret data visualizations and summaries to identify patterns and trends through effective use of R's visualization tools and packages.
4. Apply and analyze statistical methods and simple machine learning models for inference, prediction, and clustering using R.
5. Develop and communicate complete data science solutions by integrating data preparation, analysis, modeling, and reporting in R through practical projects and reproducible reports.

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Demonstrate proficiency in working with the R environment, scripts, projects, and basic data structures such as vectors, data frames, and tibbles.
2. Import, clean, and preprocess data from multiple sources (CSV, Excel, text files) and handle missing values and outliers using R functions and packages.
3. Construct and customize a variety of data visualizations (bar charts, histograms, scatterplots, boxplots, line graphs) and perform exploratory data analysis to summarize datasets.
4. Execute and evaluate statistical analyses, hypothesis testing, and model building (regression, classification, clustering), interpreting results with appropriate R functions.
5. Integrate and present a complete data analytics workflow—from data import and EDA

*Danda*

## Course Contents/Syllabus:

Descriptors/Topics	CLO	Hours
<b>UNIT I</b>		
<b>Introduction to Data Science and R:</b> What is Data Science, applications, workflow, and lifecycle, installing R and RStudio, exploring the RStudio interface, creating and managing R scripts and projects, understanding data types including numeric, character, logical, and factor, working with variables, operators, and expressions in R, using data structures such as vectors, lists, matrices, arrays, data frames, and tibbles, importing data from CSV, Excel, and text files, exporting data to files, introduction to R packages like 'readr' and 'tibble'.	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Data Manipulation and Visualization:</b> Data cleaning concepts: identifying and handling missing values and outliers, data transformation using dplyr (filter, select, mutate, arrange, summarize), reshaping data (pivot_longer, pivot_wider), data aggregation, introduction to EDA, principles of graphical representation, creating and customizing basic plots (bar, histogram, boxplot, scatterplot, line) with ggplot2.	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>Statistical Analysis and Modeling:</b> Descriptive statistics: measures of central tendency and dispersion, frequency tables, visual summaries, probability and probability distributions (normal, binomial), estimation, basic inferential methods: confidence intervals, hypothesis testing (t-test, chi-square, ANOVA), correlation and association analysis, introduction to the role of these concepts in practical data science problems.	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Data Analytics and Interpretation:</b> Introduction to the modeling process and problem framing, regression analysis (simple and multiple linear regression, interpretation of coefficients), classification concepts (logistic regression, introductory decision trees), model evaluation and validation (train-test split, cross-validation, confusion matrix, ROC, AUC, performance metrics), unsupervised learning: introduction to clustering (K-means, hierarchical), basics of dimensionality reduction (PCA), interpretation of results.	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Model Deployment, Interpretation, and Data Science Best Practices:</b> Overview of model interpretation: understanding feature importance, explaining model outputs, model limitations and common pitfalls, reproducibility and documentation in data science (using reports and markdown in R), introduction to model deployment concepts (how data science models are taken to production, monitoring), introduction to responsible data science: bias and fairness, privacy/ethics, data-driven decision making, overview of collaboration in data science projects, communication of findings to stakeholders.	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

### Learning Resources:

#### Text Books:

1. "R for Data Science (2nd Edition)" by Hadley Wickham, Mine Çetinkaya-Rundel, and Garrett Grolemund (O'Reilly Media, 2023)
2. Modern Data Science with R (2nd Edition)" by Benjamin S. Baumer, Daniel T. Kaplan, and Nicholas J. Horton (Chapman and Hall/CRC, 2021)

#### Reference Books:

1. Practical Statistics for Data Scientists: 50+ Essential Concepts Using R and Python, Book by Andrew Bruce, Peter Gedeck, and Peter Gedeck
2. The Art of Data Science by Roger D. Peng and Elizabeth Matsui
3. Hands-On Programming with R by Garrett Grolemund
4. Advanced R by Hadley Wickham

#### Online Resources/E-learning Resources:

1. [Foundations of R Software By Prof. Shalabh, IIT Kanpur](#)
2. [R for Data Science Online Book](#)

*Danda*

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 5</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Data Science and Analytics Laboratory</b>			<b>Course Code/ Course Type</b>		<b>UBTDS323/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
-	1	-	1	2	25	-	25	

Pre-Requisite:

1. R Programming Fundamentals
2. Descriptive Statistics
3. Data Types and File Handling

**Course Objectives (CO):**

**The objectives of Data Science and Analytics Laboratory are:**

1. Recognize and describe the R programming environment and basic R syntax for data analysis tasks.
2. Import, explore, and organize diverse datasets, demonstrating skills in data cleaning and preprocessing.
3. Summarize, visualize, and interpret data through descriptive statistics and graphical techniques.
4. Analyze datasets to identify patterns, conduct statistical testing, and justify analytical conclusions.
5. Develop and evaluate regression, classification, and clustering models, integrating results into a cohesive data science workflow.

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Demonstrate the ability to operate R and RStudio, execute basic commands, and explain core data structures.
2. Import datasets into R, examine their structure, and perform data cleaning and preprocessing to prepare for analysis.
3. Compute and interpret summary statistics, generate relevant visualizations, and perform feature engineering using R.
4. Analyze data through exploratory techniques and hypothesis testing, interpreting and evaluating results.
5. Build and assess predictive models—regression, classification, or clustering—drawing insightful conclusions and documenting the process in an organized report.

### Practical Plan:

Practical Number	Practical Title	Week Number	Details	CLO	Hours
1	Practical 1	1	LInstall R and RStudio, explore the interface (console, editor, environment, plots), run simple commands, create and assign variables, use basic data types, and perform basic arithmetic operations.	CLO1	2

*Danda*

2	Practical 2	2	Import a dataset into R, inspect its structure, summarize variable types and distributions, and identify any missing values. <i>Example datasets: Titanic, California Housing, Iris</i>	CLO2	2
3	Practical 3	3	Clean and preprocess a new dataset by removing duplicates, handling missing values, and standardizing data formats using appropriate R functions. <i>Example datasets: Housing Prices, Heart Disease, Students Performance</i>	CLO2	2
4	Practical 4	4	Generate and interpret descriptive statistics (mean, median, mode, standard deviation), and create basic visualizations such as histograms and scatterplots using R. <i>Example datasets: Iris, Diabetes, Mall Customers</i>	CLO3	2
5	Practical 5	5	Perform variable transformation (binning, encoding, scaling) and create new features or derived columns for deeper analysis. <i>Example datasets: Heart Disease, Superstore Sales, Netflix Movies</i>	CLO3	2
6	Practical 6	6	Conduct EDA to uncover patterns, correlations, and trends in the data, and visualize the findings with R plotting libraries. <i>Example datasets: Global Superstore, Students Performance, Boston Housing</i>	CLO4	2
7	Practical 7	7	Apply statistical tests (e.g., t-test, ANOVA, correlation) in R to answer relevant data-driven questions. <i>Example datasets: Students Performance, CO<sub>2</sub> Emissions, Retail</i>	CLO4	2
8	Practical 8	8,9	Build and evaluate a regression model (e.g., linear regression) to predict a numeric variable and interpret the results using R. <i>Example datasets: Boston Housing, Life Expectancy, California Housing</i>	CLO5	4
9	Practical 9	10,11	Perform a classification analysis (e.g., logistic regression, decision tree) and assess model accuracy using performance metrics such as confusion matrix or ROC curve in R. <i>Example datasets: Diabetes, Titanic, Heart Disease</i>	CLO5	4
10	Practical 10	12,13	Apply a clustering technique such as K-means in R, visualize cluster assignments, and interpret group characteristics. <i>Example datasets: Mall Customers, Iris, Retail Segmentation</i>	CLO5	4

**Total Hours**

*Danda*

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 5</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Agile Project Management with Jira</b>			<b>Course Code/ Course Type</b>		<b>MOOCDS501/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>25</b>	<b>25</b>	<b>-</b>	

Pre-Requisite:

1. Basic understanding of project management and familiarity with IT systems

<b>Course Objectives (CO):</b>	<p><b>The objectives of Agile Project Management with Jira are:</b></p> <ol style="list-style-type: none"> <li>1. To introduce Agile methodologies and their application in modern project management.</li> <li>2. To develop expertise in leveraging Atlassian Jira for effective project tracking and management.</li> <li>3. To integrate Agile principles with technical system administration concepts for streamlined project delivery.</li> <li>4. To provide hands-on experience in setting up and managing Agile workflows using Jira.</li> <li>5. To prepare students for roles in Agile project management and IT operations.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Understand Agile principles, frameworks, and practices.</li> <li>2. Implement Agile workflows and tools using Atlassian Jira</li> <li>3. Apply Agile methodologies in system administration and IT projects</li> <li>4. Analyze and resolve project bottlenecks using Agile techniques</li> <li>5. Design and manage end-to-end Agile projects in an IT environment</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Fundamentals of Agile Project Management</b> Introduction to Agile –(Principles and Manifesto,Benefits of Agile Over Traditional Methodologies),Agile Frameworks –(Scrum, Kanban, and SAFe,Roles in Agile Teams),Agile Planning and Iterations –(Sprints, User Stories, and Backlogs,Estimation and Velocity),Agile Metrics and Success Indicators-(Hands-on Exercise: Create a sample backlog and sprint plan).	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Working with Models and Databases</b> Introduction to Jira –(Setting Up Jira for Agile Projects,Understanding Boards, Backlogs, and Workflows),Managing Agile Projects in Jira –(Creating Epics, Stories, and Tasks,Configuring and Managing Sprint Boards),Advanced Jira Features-(Automations and Custom Workflows,Generating Agile Reports and Dashboards),Collaboration and Issue Tracking-(Linking Issues and Managing Dependencies,Using Jira for Team Collaboration,Hands-on Exercise: Configure a Jira project with custom workflows and dashboards).	<b>CLO 2</b>	<b>6</b>

*Danda*

UNIT III		
<b>Agile Practices in System Administration</b> Applying Agile in IT Operations-(Aligning System Administration with Agile Principles,Continuous Integration and Delivery (CI/CD) Practices),Configuring System Automation-(Using Ansible for IT Automation,Managing Configurations in Agile Projects),Monitoring and Logging for Agile Project-(Setting Up Monitoring Systems,Using Logs for Agile Metrics),Managing Dependencies in IT Projects -(Resolving Technical Bottlenecks with Agile Practices, Hands-on Exercise: Automate a system administration task using Ansible within an Agile framework.).	<b>CLO 3</b>	<b>6</b>
UNIT IV		
<b>Advanced Agile Techniques and Integration</b> Scaling Agile for Large Teams-(Applying SAFe and LeSS Frameworks,Managing Multiple Agile Teams with Jira),Agile Risk and Change Management-(Identifying and Mitigating Risks in Agile Projects,Handling Change Requests in Agile Environments),Agile in DevOps and IT Projects-(Integrating DevOps Practices with Agile,Agile Workflows for System Administration Projects),Jira Integrations and Plugins-(Integrating Jira with Confluence and Bitbucket,Using Plugins to Enhance Jira Functionality,Hands-on Exercise: Manage a large-scale Agile project using Jira with integrated tools.).	<b>CLO 4</b>	<b>6</b>
UNIT V		
<b>Capstone Project and Future Directions</b> Designing an End-to-End Agile Workflow-(Setting Up a Complete Agile Project in Jira,Incorporating IT Operations and DevOps Practices) ,Agile Project Presentation-(Reporting Progress Using Jira Dashboards,Presenting Agile Metrics and Success Indicators),Challenges in Agile Implementation -(Overcoming Resistance to Agile Practices, Adapting Agile for Non-Traditional Teams),Future Trends in Agile and Jira-(Agile Beyond IT: Marketing, HR, and More,Evolving Features in Jira for Next-Gen Project Management,Capstone Project Presentation: Demonstrate a fully configured Jira project with Agile workflows for IT operations.).	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. "Agile Project Management with Jira"by David Harned
2. "Red Hat System Administration III"

### Reference Books:

1. "Essential Scrum: A Practical Guide to the Most Popular Agile Process"by Kenneth S. Rubin.
2. "Agile Estimating and Planning"by Mike Cohn
3. "Jira 8 Essentials"by Patrick Li
4. "DevOps Handbook: How to Create World-Class Agility, Reliability, and Security"by Gene Kim, Patrick Debois, and John Willis.

### Online Resources/E-learning Resources:

1. <https://www.coursera.org/learn/agile-project-management>
2. <https://www.coursera.org/learn/agile-atlassian-jira>

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 5</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Foundations of Blockchain and Java EE</b>			<b>Course Code/ Course Type</b>		<b>MOOCDS502/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>25</b>	<b>-</b>	<b>25</b>	

Pre-Requisite:

1. Basic programming knowledge and familiarity with distributed systems concepts

<b>Course Objectives (CO):</b>	<p><b>The objectives of Foundations of Blockchain and Java EE are:</b></p> <ol style="list-style-type: none"> <li>1. To provide foundational knowledge of blockchain technology, its architecture, and applications.</li> <li>2. To equip students with the skills to develop enterprise-grade applications using Java EE.</li> <li>3. To understand the interplay between blockchain technologies and Java EE in building robust, secure, and scalable applications.</li> <li>4. To enhance practical skills in implementing blockchain concepts and Java EE-based solutions.</li> <li>5. To prepare students for roles in blockchain development and enterprise application programming.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Understand the principles and architecture of blockchain technology.</li> <li>2. Analyze blockchain use cases and implement basic blockchain solutions.</li> <li>3. Develop Java EE applications using enterprise-grade programming techniques.</li> <li>4. Integrate blockchain functionalities into Java EE-based applications.</li> <li>5. Design, implement, and deploy secure and scalable enterprise applications leveraging blockchain.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Blockchain Technology</b> Fundamentals of Blockchain (Overview of Blockchain Technology; Distributed Ledgers, Consensus Mechanisms, and Cryptography), Blockchain Architecture (Blocks, Transactions, and Smart Contracts, Public vs. Private Blockchains)Blockchain Use Cases (Cryptocurrency, Supply Chain, and Decentralized Applications) Introduction to Smart Contracts (Basics of Solidity Programming).Hands-on Exercise: Explore a public blockchain and analyze transaction records.	<b>CLO 1</b>	<b>6</b>

*Danda*

UNIT II		
<b>Developing Blockchain Applications</b> (Based on "Blockchain Basics") Setting Up a Blockchain Environment (Installing and Configuring Development Tools, Creating a Private Blockchain Network). Writing and Deploying Smart Contracts ,( Smart Contract Lifecycle and Deployment, Writing Basic Smart Contracts with Solidity). Integrating Blockchain with Applications ( Connecting Web Interfaces with Blockchain; Using APIs to Interact with Blockchain Networks) . Advanced Blockchain Concepts (Sidechains, Oracles, and Layer-2 Solutions). Hands-on Exercise: Write and deploy a smart contract for a simple decentralized application.	<b>CLO 2</b>	<b>6</b>
UNIT III		
<b>Java EE Fundamentals</b> (Based on Red Hat AD183 - Java EE 7.0) Introduction to Java EE ( Overview of Enterprise Java Applications, Java EE Architecture and Components). Developing Web Applications (Servlets, JSP, and WebSocket API; Handling HTTP Requests and Responses) Enterprise JavaBeans (EJB) ( Stateless, Stateful, and Singleton Beans; Dependency Injection in Java EE). Security in Java EE Applications ( Authentication, Authorization, and Encryption). Hands-on Exercise: Create a basic Java EE web application with servlets and JSP.	<b>CLO 3</b>	<b>6</b>
UNIT IV		
<b>Advanced Java EE and Blockchain Integration</b> Java EE Persistence API ( Introduction to JPA and ORM Concepts; Managing Databases with Java EE). Java EE Messaging and Transactions (JMS and Message-Driven Beans; Distributed Transactions and Two-Phase Commit) Integrating Blockchain into Java EE Applications (Using Blockchain APIs in Java EE; Designing Hybrid Applications with Java EE and Blockchain. Building Scalable Applications (Microservices Architecture with Java EE; Using Kubernetes and Docker for Deployment)Hands-on Exercise: Build a Java EE application that integrates blockchain functionalities.	<b>CLO 4</b>	<b>6</b>
UNIT V		
<b>Deployment and Capstone Project</b> Deploying Blockchain and Java EE Applications (Deployment Strategies for Blockchain Solutions; Deploying Java EE Applications on Red Hat JBoss)Debugging and Optimizing Applications ( Performance Tuning for Java EE; Monitoring Blockchain Transactions) Capstone Project ( Design and Develop a Java EE Application with Blockchain Integration; Present the Architecture, Implementation, and Deployment Strategy) . Future Directions in Blockchain and Java EE ( Emerging Trends and Career Opportunities; Preparing for Certifications (e.g., Red Hat Certified Application Developer). Capstone Project Presentation: Demonstrate a full-stack blockchain-integrated enterprise application.	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. "Blockchain Basics: A Non-Technical Introduction in 25 Steps"by Daniel Drescher
2. "Enterprise JavaBeans 3.2"by Andrew Lee Rubinger and Aslak Knutsen

### Reference Books:

1. "Mastering Blockchain"by Imran Bashir
2. "Java EE 7: The Big Picture"by Dr. Danny Coward
3. "Building Blockchain Projects"by Narayan Prusty
4. "Red Hat Application Development I (AD183)"(Official Course Material)
5. "Beginning EJB in Java EE 8"by Jonathan Wetherbee

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 5</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Aptitude And Logical Reasoning</b>			<b>Course Code/ Course Type</b>		<b>ACALR301/AC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	

Pre-Requisite:NA

**Course Objectives (CO):**

**The objectives of Aptitude and Logical Reasoning are:**

1. To Familiarize Students with Different Types of Mathematical Problems.
2. To learn and Strengthen Logical Reasoning Skills.
3. To Develop Critical Thinking Skills.
4. To Improve Quantitative and Numerical Skills.
5. To Prepare Students for Standardized Tests and build Confidence in Problem-Solving.

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Students will develop enhanced problem-solving abilities through Exposure to various types of aptitude and logical reasoning problems.
2. Sharpen their analytical thinking skills by learning to analyze and interpret different types of data, patterns, and logical structures.
3. Cultivate critical thinking abilities by challenging students to evaluate and assess information, arguments, and scenarios using logical reasoning principles.
4. Apply different forms of logical reasoning, such as deductive reasoning, inductive reasoning, and critical reasoning, to solve problems and make decisions.
5. Students will be able to develop soft skills and communication skills.

**Course Contents/Syllabus:**

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Quantitative Aptitude</b> Number System, Problems on Ages, Percentage, Average, Time and Work, Profit and Loss, Permutation and Combination	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Logical Reasoning</b> Number Series, Letter Series, Coding and Decoding, Calendars, Clocks	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>Verbal Reasoning</b> Subject-Verb Agreement, Preposition and Verbal Analogy, Closet test	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Personality Development</b> Resilience, Motivation and Listening skills, Self-confidence, Body language, Leadership, Goal setting, Emotional intelligence, Personal growth and development	<b>CLO 4</b>	<b>6</b>

**UNIT V**

**Soft Skills and Communication Skills** Introduction to Teamwork, Collaboration and Time Management, Communication Skills, Organization Skills, Introduction to Critical Thinking, Leadership, Negotiation and Presentation Skills, Time Management, Adaptability Skills, actively listening in conversations, Public speaking, Effectively communicating ideas to others, Introduction to Career Development, Goal Setting, Emotional Intelligence Fundamentals, Building Adaptability and Resilience

**CLO 5****6****Total Hours****30****Learning Resources:****Text Books:**

1. Quantitative Aptitude for Competitive Examinations, R.S Agarwal, 2017
2. Quantitative Aptitude for All Competitive Examinations by Abhijit Guha, 6th edition, 2016
3. Word Power Made Easy by Norman Lewis, 2023

**Reference Books:**

1. The Pearson Guide to Quantitative Aptitude for Competitive Examinations by Dinesh khattar, 2nd Edition.

<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite:								
<ol style="list-style-type: none"> <li>1. Applied Statistical Techniques</li> <li>2. Introduction to Artificial Intelligence</li> </ol>								
<b>Course Objectives (CO):</b>			<b>The objectives of Data Modeling and Visualization are:</b>					
			<ol style="list-style-type: none"> <li>1. To recall the concepts of data visualization to develop charts, maps, tables, and other visual representations of data.</li> <li>2. To recognize visualization tools to conduct data analysis, especially exploration of an unfamiliar dataset.</li> <li>3. To apply the concept of interactive dashboards to combine several visualizations into a cohesive and functional whole.</li> <li>4. To analyze and design features animations techniques.</li> <li>5. To evaluate various principles of visualization.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Students will be able to understand the basics of plotting techniques.</li> <li>2. Explain the procedure various data visualization methods.</li> <li>3. Apply knowledge of various animation types.</li> <li>4. Analyze data the various principles of visualization.</li> <li>5. Evaluate how to perform group operations.</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Fundamentals of Data Modeling for Visualization:</b> Types of Data: Categorical, Ordinal, Numerical, Temporal, Data Granularity and Hierarchies, Conceptual, Logical, and Analytical Models ,Business Metrics: KPI, Dimensions, Measures, Choosing the Right Aggregation: Sum, Avg, Percent of Total, etc.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Principles of Visual Encoding:</b> Pre-attentive Attributes: Color, Size, Shape, Position, Data-Ink Ratio and Minimalism in Charts, Visual Perception and Cognitive Load, Common Pitfalls: 3D charts, color misuse, misleading axes, Design for Purpose: Exploration vs Explanation.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>Chart Selection and Visualization Grammar:</b> Visual Mapping of Variables to Chart Types, Univariate Visuals: Histogram, Box Plot, Strip Plot, Bivariate Visuals: Scatterplot, Bar, Line Chart, Multivariate Visuals: Heatmap, Bubble Chart, Parallel Coordinates, Time Series Plots and Seasonality Visualization	<b>CLO</b>	

UNIT IV		
<b>Visualization Tools and Dashboarding Concepts:</b> Introduction to Tools: Power BI, Tableau, Looker Studio, Importing, Filtering, and Aggregating Data Interactivity: Filters, Slicers, Drilldowns, Tooltips, Dashboard Composition: Layout, KPIs, Design Heuristics, Data Storytelling Elements: Narrative, Context.	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Visual Ethics, Accessibility, and Applications:</b> Avoiding Bias and Misrepresentation, Inclusive Visualization: Colorblind-friendly palettes, screen-reader support, Visualization in Various Domains: Healthcare, Finance, Retail Real-World Case Studies and Pitfalls, Capstone Design Review of Public Dashboards	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Storytelling with Data by Cole Nussbaumer Knaflic
2. Fundamentals of Data Visualization by Claus O. Wilke

### Reference Books:

1. The Big Book of Dashboards by Steve Wexler, Jeffrey Shaffer, Andy Cotgreave
2. Information Dashboard Design by Stephen Few
3. Interactive Data Visualization for the Web by Scott Murray

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 6</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Data Modeling and Visualization Laboratory</b>			<b>Course Code/ Course Type</b>		<b>UBTDS326/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
-	1	-	1	2	25	-	25	

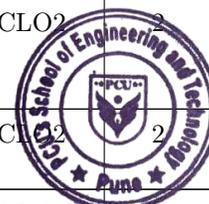

Pre-Requisite:

1. Knowledge of C Programming and DSA

<b>Course Objectives (CO):</b>	<p><b>The objectives of Data Modeling and Visualization Laboratory are:</b></p> <ol style="list-style-type: none"> <li>1. Import, transform, and cleanse datasets using modern BI tools.</li> <li>2. Create basic and advanced data visualizations for various data types.</li> <li>3. Design interactive dashboards using filters, slicers, and visual KPIs.</li> <li>4. Perform time-series and multivariate visual analysis for real-world datasets.</li> <li>5. Build thematic dashboards that align with analytical objectives and user needs.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Load data into Power BI / Tableau / Looker Studio and perform preprocessing.</li> <li>2. Create and justify chart types for quantitative and categorical variables.</li> <li>3. Develop interactive dashboards integrating drill-downs and visual hierarchy.</li> <li>4. Implement design elements that ensure accessibility and readability.</li> <li>5. Build full dashboards from real datasets and present insights as stories.</li> </ol>

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Data Import and Cleansing in Tableau or Power BI	1	Import flat file, apply data types, rename fields, filter nulls	CLO1	2
2	Create Basic Visuals: Bar, Line, and Pie Charts	2	Use appropriate chart types and formatting for 1D and 2D data	CLO1	2
3	Histogram and Boxplot Construction	3	Analyze distribution, outliers, skewness visually	CLO2	2
4	Scatterplots and Bubble Charts	4	Visualize correlation and multivariate relationships	CLO2	2
5	Time Series Visualization	5	Plot trends with rolling averages, highlight seasonality	CLO3	2

6	Heatmaps and Tree Maps	6	Encode multiple dimensions using color/size	CLO3	2
7	Design Interactive Dashboards with Filters and Slicers	7	Add user-driven interactivity using drop-downs, buttons	CLO4	2
8	KPI Cards and Scorecards	8,9	Display dynamic metrics with thresholds and indicators	CLO4	4
9	Drill-down and Hierarchical Visualizations	10,11	Create region → state → city or year → quarter → month navigation	CLO5	4
10	Build a Thematic Dashboard for a Real Dataset	12,13	Complete case: e.g., COVID dashboard, sales performance, stock trends	CLO5	4
11	Mini project	14,15	Mini Project	CLO 1/2/3/4/5	4
<b>Total Hours</b>					<b>30</b>

<b>Course Pattern:</b>		<b>2025</b>		<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>				<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>

Pre-Requisite:

1. Applied Statistical Techniques
2. Introduction to Artificial Intelligence

<b>Course Objectives (CO):</b>	<p><b>The objectives of Machine Learning Techniques are:</b></p> <ol style="list-style-type: none"> <li>1. Introduce fundamental concepts, types, workflow, and applications of Machine Learning.</li> <li>2. Develop skills in data preprocessing, feature engineering, exploratory data analysis, and evaluation metrics.</li> <li>3. Enable students to understand and implement classification, regression, and unsupervised learning algorithms.</li> <li>4. Provide knowledge of model evaluation, selection techniques, ensemble methods, and ML pipeline development.</li> <li>5. Familiarize students with reinforcement learning principles and neural network architectures for intelligent systems.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Explain Machine Learning concepts, learning paradigms, workflow, and real-world applications.</li> <li>2. Perform data preprocessing, feature engineering, EDA, and evaluate models using confusion matrix and ROC-AUC.</li> <li>3. Apply classification, regression, and unsupervised learning algorithms and address issues such as class imbalance and regularization.</li> <li>4. Evaluate and optimize ML models using cross-validation, performance metrics, hyperparameter tuning, and ensemble techniques.</li> <li>5. Explain and implement reinforcement learning methods and neural network models including perceptron and multilayer perceptron.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Machine Learning:</b> Types of learning – supervised, unsupervised, reinforcement; ML workflow; applications. <b>Data Preprocessing and Feature Engineering:</b> Handling missing values, encoding, scaling, splitting datasets- Exploratory Data Analysis (EDA), Correlation and Covariance, Evaluation matrices: confusion matrix, ROC-AUC	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Classification Algorithms:</b> Logistic regression, k-NN, decision trees & its type, Naive Bayes, Logistic Regression, Decision Tree and types, Support Vector Machines (SVM), Class imbalance-SMOTE-One class SVM-Optimization of hyper parameter.	<b>CLO 2</b>	<b>9</b>

*Dan*

UNIT III		
<b>Regression Algorithms:</b> Simple and multiple linear regression, polynomial regression, evaluation metrics (MAE, MSE, $R^2$ ), Ridge and Lasso <b>Unsupervised Learning:</b> k-means clustering, types of clustering, hierarchical clustering, PCA, use cases.	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Model Evaluation and Selection:</b> Bias-variance trade off, cross-validation, overfitting/underfitting, hyperparameter tuning, Cross-Validation, Performance Metrics (Accuracy, Precision, Recall, F1 Score, ROC, AUC) <b>Ensemble Methods and ML Pipelines:</b> Bagging, boosting, Random Forest, Gradient Boosting, sklearn pipeline creation, XG-BOOST and AdaBoost	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Reinforcement Learning (RL) and Neural Networks:</b> Basics of RL-RL framework, Markov Decision Process-Exploration and Exploitation, Policies, Value functions and Bellman Equations-Solution Methods-Q Learning <b>Neural Networks and Deep Learning Introduction:</b> Perceptron Model: Single-layer learning, Multilayer Perceptron (MLP): Backpropagation Algorithm, Activation function and its types	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow by Aurélien Géron
2. Understanding Machine Learning: From Theory to Algorithms by Shai Shalev-Shwartz & Shai Ben-David

### Reference Books:

1. Pattern Recognition and Machine Learning by Christopher M. Bishop
2. Machine Learning by Tom M. Mitchell
3. The Elements of Statistical Learning by Trevor Hastie, Robert Tibshirani, Jerome Friedman

### Online Resources/E-learning Resources:

1. [NPTEL: Machine Learning – IIT Kharagpur](#)
2. [Google Machine Learning Crash Course](#)

*Danda*

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>		<b>Semester: 6</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Machine Learning Techniques Laboratory</b>		<b>Course Code/ Course Type</b>		<b>UBTDS328/PEC</b>	
<b>Course Pattern:</b>		<b>2025</b>		<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>				<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>
-	1	-	1	2	25	-	25

Pre-Requisite:

1. Basics of Python
2. Basics R Language

**Course Objectives (CO):**

**The objectives of Design And Analysis of Algorithms Laboratory are:**

1. Perform data preprocessing, feature engineering, and exploratory data analysis on datasets.
2. Implement and evaluate supervised machine learning classification algorithms.
3. Apply regression techniques and regularization methods for predictive analysis.
4. Evaluate and optimize machine learning models using validation techniques and performance metrics.
5. Design and implement basic neural network models for classification tasks

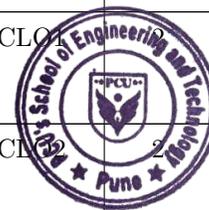

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Apply data preprocessing, feature engineering, EDA, correlation, and covariance techniques.
2. Implement and analyze classification algorithms such as Logistic Regression and k-NN.
3. Develop regression models including multiple, polynomial, Ridge, and Lasso regression.
4. Evaluate ML models using cross-validation, performance metrics, and bias-variance analysis.
5. Implement neural network models including single-layer perceptron and multilayer perceptron.

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Data Preprocessing & Feature Engineering	1	To Study and Implementation of Data Preprocessing and Feature Engineering Techniques using a Sample Dataset	CLO1	2
2	Exploratory Data Analysis (EDA)	2	To Exploratory Data Analysis and Statistical Relationship Study using Correlation and Covariance on a Sample Dataset	CLO1	2
3	Logistic Regression Classification	3	To Design and Implementation of a Logistic Regression Model for Classification using a Sample Dataset	CLO1	2

*Danda*

Practical Number	Practical Title	Week Number	Details	CLO	Hours
4	k-Nearest Neighbors (k-NN)	4	Implementation and Performance Analysis of k-Nearest Neighbors (k-NN) Classification Algorithm using a Sample Dataset	CLO2	2
5	Multiple & Polynomial Regression	5,6	To Develop of Predictive Models using Multiple Linear Regression and Polynomial Regression on a Sample Dataset	CLO3	4
6	Ridge & Lasso Regression	7,8	Performance Improvement of Regression Models using Ridge and Lasso Regularization Techniques on a Sample Dataset	CLO3	4
7	Model Evaluation & Cross-Validation	9	Evaluation of Machine Learning Models using Cross-Validation and Standard Performance Metrics on a Sample Dataset	CLO4	2
8	Bias-Variance Analysis	10	To Analyze of Overfitting and Underfitting through Bias-Variance Trade-off using a Sample Dataset	CLO4	2
9	Single Layer Perceptron	11	To Implement a Single Layer Perceptron for Binary Classification using a Sample Dataset	CLO5	2
10	Multilayer Perceptron (MLP)	12,13	Design and Implementation of a Multilayer Perceptron using Backpropagation Algorithm on a Sample Dataset	CLO5	4
11	Mini-Project: End-to-End ML Pipeline	14,15	Design and Implementation of an End-to-End Machine Learning Pipeline using a Real-World Sample Dataset	CLO 1/2/3/4/5	4
<b>Total Hours</b>					<b>30</b>

## Learning Resources:

### Text Books:

1. Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow by Aurélien Géron
2. Understanding Machine Learning: From Theory to Algorithms by Shai Shalev-Shwartz & Shai Ben-David

1. Knowledge of C Programming and DSA

<b>Course Objectives (CO):</b>	<p><b>The objectives of Advanced Algorithmic Techniques are:</b></p> <ol style="list-style-type: none"> <li>1. To develop a strong theoretical foundation in advanced algorithm design strategies.</li> <li>2. To analyze algorithm efficiency and apply suitable techniques to real-world problems.</li> <li>3. To enhance problem-solving skills using systematic algorithmic approaches.</li> <li>4. To enable students to design and implement optimal solutions using advanced techniques such as Dynamic Programming, Backtracking, and Branch and Bound.</li> <li>5. To cultivate analytical and critical thinking skills for comparing, selecting, and optimizing algorithmic solutions under given constraints.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Understand and <b>Analyze</b> fundamental algorithm design techniques and computational complexity.</li> <li>2. Apply Divide and Conquer and Greedy strategies to efficiently solve computational problems.</li> <li>3. Design and develop optimal solutions using Dynamic Programming techniques.</li> <li>4. Solve constraint satisfaction and combinatorial problems using Backtracking methods.</li> <li>5. Implement and analyze optimization problems using Branch and Bound techniques.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<p><b>Introduction:</b> Definition and characteristics of algorithms, Pseudocode and algorithm representation, Analysis of Algorithm: Efficiency–Analysis framework, Time complexity and space complexity, Asymptotic notations: Big-O, Big-Ω, Big-Θ, Best case, worst case, and average case analysis. Analysis of non-recursive and recursive algorithms, Introduction to Computation complexity, Classes: P, NP, NP-Complete, NP-Hard.</p>	<b>CLO 1</b>	

*Danda*

Descriptors/Topics	CLO	Hours
<b>UNIT II</b>		
<b>Divide and Conquer and Greedy Method:</b> Divide & Conquer strategy, Recurrence relations and Master Theorem, Algorithms: Binary Search, Merge Sort, Quick Sort, Analysis – Worst, Best and average case. Greedy Method: Strategy, Characteristics and Applications, Greedy choice property and optimal substructure, Algorithms: Activity Selection, Job Sequencing, Fractional Knapsack, Huffman Coding, Prim’s and Kruskal’s Algorithm, Dijkstra’s Algorithm, Comparison between Divide & Conquer and Greedy approaches.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>Dynamic Programming:</b> Introduction to Dynamic Programming, Principle of optimality, Overlapping subproblems, Top-down vs Bottom-up approaches: Memoization and tabulation, Dynamic Programming Algorithms and Applications: Fibonacci Series, Matrix Chain Multiplication, Longest Common Subsequence, 0/1 Knapsack Problem, Coin change-making problem, Multistage Graph Problem (Forward Computation), Travelling Salesman Problem (TSP), Shortest Path Algorithms: Bellman-Ford Algorithm, Floyd-Warshall Algorithm, Examples and complexity analysis.	<b>CLO 3</b>	<b>9</b>
<b>UNIT IV</b>		
<b>Backtracking:</b> Concept of brute force method and exhaustive search; limitations of brute force; Concept of backtracking, Depth-first search approach, State space tree, Bounding functions and feasibility tests, General Backtracking Algorithms: Recursive backtracking, iterative backtracking approach; Applications of Backtracking: N-Queens Problem, Graph Coloring Problem, Hamiltonian Cycle Problem, Subset Sum Problem; Comparison of Brute Force and Backtracking Methods.	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
<b>Branch and Bound:</b> Introduction to Branch and Bound, difference between brute force, backtracking, and branch and bound; advantages of pruning in optimization problems, State Space Tree and Bounding Techniques, Branch and Bound Methods: FIFO Branch and Bound, LIFO Branch and Bound, Least Cost (LC) Branch and Bound; Control abstractions for least cost search and node selection strategies. 0/1 Knapsack Problem – FIFO and LC Branch and Bound approaches, Travelling Salesperson Problem – LC Branch and Bound.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Introduction to Algorithms, Cormen Thomas, Leiserson CE, Rivest RL, PHI.
2. Analysis & Design of Algorithm. Horowitz & Sahani, Computer Science Press, Latest Edition.

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>		<b>Semester: 6</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Advanced Algorithmic Techniques Lab</b>		<b>Course Code/ Course Type</b>		<b>UBTDSPE324/PEC</b>	
<b>Course Pattern:</b>		<b>2025</b>		<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>				<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>
-	1	-	1	2	25	-	25

Pre-Requisite:

1. Knowledge of C Programming and DSA

**Course Objectives (CO):**

**The objectives of Advanced Algorithmic Techniques Laboratory are:**

1. Develop a strong theoretical foundation in advanced algorithm design paradigms and computational complexity analysis.
2. Analyse algorithm efficiency by solving recurrence relations and evaluating time and space complexities.
3. Apply Divide and Conquer and Greedy strategies to design efficient solutions for optimization and scheduling problems.
4. Design optimal solutions using Dynamic Programming for problems exhibiting optimal substructure and overlapping subproblems.
5. Solve combinatorial and constraint satisfaction problems using Backtracking and Branch and Bound techniques with effective pruning strategies.

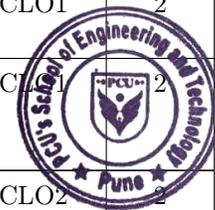

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Analyze recursive and non-recursive algorithms by formulating and solving recurrence relations using appropriate methods.
2. Design and implement efficient algorithms using Divide and Conquer and Greedy methods for sorting, selection, coding, and scheduling problems.
3. Develop optimized solutions using Dynamic Programming techniques for classical optimization and graph-based problems.
4. Apply Backtracking techniques to solve combinatorial problems such as N-Queens, Graph Coloring, Hamiltonian Cycle, and Subset Sum.
5. Implement and compare Branch and Bound techniques (FIFO, LIFO, and Least Cost) to efficiently solve optimization problems like 0/1 Knapsack and Traveling Salesperson Problem.

### Practical Plan:

Practical Number	Practical Title	Week Number	Details	CLO	Hours
1	Recursive Approach	1	Recursive Algorithms: Factorial Computation, Tower of Hanoi	CLO1	2
2	Non-Recursive (Iterative) Approach	2	Non-Recursive algorithms: Bubble Sort, Insertion Sort, Selection Sort	CLO1	2
3	Divide & Conquer	3	Binary Search, Merge Sort, Quick Sort	CLO2	2
4	Greedy Method	4,5	Fractional Knapsack Problem, Activity Selection Problem, Job Sequencing with deadline	CLO2	4

Practical Number	Practical Title	Week Number	Details	CLO	Hours
5	Dynamic Programming	6	0/1 Knapsack Problem, Coin change-making problem, Weighted Job Scheduling problem	CLO3	2
6	Graph / Path Problem	7,8	Bellman-Ford Algorithm, Floyd-Warshall Algorithm, Travelling Salesman Problem (TSP)	CLO3	4
7	Brute Force Method	9	String Matching, Subset Sum Problem, 8-Queens Problem	CLO4	2
8	Backtracking Method	10	N-Queens Problem, Graph Coloring Problem, Hamiltonian Cycle Problem	CLO4	2
9	Branch and Bound	11	LIFO node selection using a Stack, FIFO node selection using a Queue	CLO5	2
10	Branch and Bound	12,13	0/1 Knapsack Problem – FIFO and LC Branch & Bound approach, Traveling Salesperson Problem using LC Branch and Bound	CLO5	4
11	Mini Project	14,15	Mini Project	CLO 1/2/3/4/5	4
<b>Total Hours</b>					<b>30</b>

Create APIs or endpoints to serve AI models for inference at scale</li> <li>4. Apply model monitoring, retraining, and drift management strategies</li> <li>5. Explore real-world AI solutions and governance practices in cloud-based systems</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Cloud-AI Integration Principles:</b> What is AI-as-a-Service (AIaaS)?, Differences between On-Premise ML and Cloud-based ML, Introduction to Cloud AI platforms: AWS SageMaker, Azure ML, Google Vertex AI, Lifecycle of AI on Cloud: Data → Train → Deploy → Monitor, Introduction to MLOps, CI/CD for ML Pipelines	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Model Building and Training in Cloud:</b> Data ingestion: Cloud storage, data pre-processing (ETL overview), Creating Jupyter Notebooks in the Cloud, Training Models: Built-in vs Custom training scripts, Distributed Training: Multi-GPU/TPU on Cloud, Cost optimization strategies for training large models	<b>CLO 2</b>	<b>9</b>

*Danda*

UNIT III		
<b>Model Deployment and Serving Architectures:</b> Batch, Real-Time, and Streaming Inference, Deploying Models as RESTful APIs using FastAPI, Flask on cloud instances, Containerization with Docker for ML models, Model Registry: Concept and usage (MLflow, SageMaker Model Registry), Edge Deployment Overview (AWS Greengrass, GCP Edge TPU)	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Monitoring and Lifecycle Management:</b> Performance Monitoring (latency, throughput, prediction accuracy), Concept Drift Detection and Retraining Pipelines, Logging and Version Control of Models, Auto-scaling and Load Balancing AI APIs, Pipeline Orchestration Tools: Vertex Pipelines, Kubeflow Pipelines, MLflow	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Real-World Use Cases and Ethical Governance:</b> AI use cases across industries: Healthcare, Finance, E-commerce, NLP, Bias, Fairness, and Transparency in AI Systems, Security in AI APIs: IAM, Tokenization, Rate Limiting, Cost considerations and cloud billing for AI, Compliance and Governance: GDPR, HIPAA (overview only)	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

### Practical Plan:

Practical Number	Practical Title	Week Number	Details	CLO	Hours
1	Explore and Set Up Cloud AI Environment	1	Configure and connect Jupyter Notebook to AWS SageMaker / Vertex AI / Azure ML, Import datasets from cloud storage (e.g., S3, GCS, Azure Blob)	CLO1	2
2	Train a Machine Learning Model in the Cloud	2	Use built-in algorithms or custom scikit-learn model, Visualize training metrics using the cloud console	CLO1	2
3	Deploy a Model as a REST API Endpoint	3	Create and expose endpoint from a trained model using cloud UI or CLI, Test using Postman or Python requests	CLO2	2
4	AutoML Workflow (No-code / Low-code)	4	Train and deploy a model using AutoML tools provided by GCP, Azure, or AWS	CLO2	2

*Danda*

5	Containerize and Deploy a Model using Docker	5	Create a Docker image of a simple model and deploy to Google Cloud Run or AWS Fargate	CLO3	2
6	Implement ML Pipeline with MLflow / Vertex Pipelines	6,7	Log experiments, model versions, and parameters	CLO3	4
7	Monitor and Retrain a Deployed Model	8,9	Set up alerts for performance drop (concept drift simulation)	CLO4	4
8	Distributed Training on GPU/TPU (using managed services)	10,11	Use cloud instances to train a large model faster and log GPU usage	CLO4	4
9	Version Control and Continuous Integration for ML	12,13	Integrate GitHub and set up CI/CD using GitHub Actions for ML model deployment	CLO5	4
10	Build a Real-Time Inference Dashboard	14,15	Use Streamlit/Flask + deployed endpoint to create a live demo app	CLO5	4
<b>Total Hours</b>					<b>30</b>

Implement public-key cryptographic algorithms and key exchange mechanisms for secure communication.</li> <li>4. Describe message authentication techniques and network security protocols such as SSL/TLS, IPSec, and email security mechanisms.</li> <li>5. Analyze firewall architectures, VPN models, and intrusion detection mechanisms for secure network communication.</li> </ol>

### Course Contents/Syllabus:

Descriptors/Topics	CLO	Hours
<b>UNIT I</b>		
<b>Foundations of Network Security:</b> Need for Network Security, CIA Triad, Threats and Attacks: Interception, Interruption, Modification, Fabrication, Types of Attacks: Passive vs Active, DoS, MITM, Replay, Spoofing, Security Services: Authentication, Access Control, Data Integrity, OSI Security Architecture and Attack Surface	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Classical and Symmetric-Key Cryptography:</b> Substitution and Transposition Ciphers (Caesar, Vigenère), Block Cipher Structure, Feistel Networks, DES: Design and Limitations, Triple DES and AES (Structure, S-boxes, Key Expansion), Block Cipher Modes of Operation: ECB, CBC, CFB, OFB, CTR	<b>CLO 2</b>	<b>9</b>

<b>UNIT III</b>		
<b>Public-Key Cryptography and Key Exchange:</b> Principles of Public Key Cryptography, RSA Algorithm: Key Generation, Encryption, Decryption, Security, Diffie-Hellman Key Exchange, ElGamal Encryption (conceptual), Digital Signatures: RSA, DSS (Digital Signature Standard)	<b>CLO 3</b>	<b>9</b>
<b>UNIT IV</b>		
<b>Message Authentication and Network Security Protocols:</b> Message Authentication Codes (MAC), HMAC, Cryptographic Hash Functions: MD5, SHA-2, SHA-3, SSL/TLS Protocol: Record and Handshake Layer, IP Security (IPSec): AH and ESP, Email Security: PGP and S/MIME (flow, formats)	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
<b>Firewalls, VPNs, IDS, and Emerging Concepts:</b> Packet Filtering and Stateful Firewalls, Application-level Gateway and Proxy Firewall, Virtual Private Networks (VPN): Tunneling, IPsec-based VPNs, Intrusion Detection and Prevention Systems (IDS/IPS), Introduction to Honeypots, Zero Trust Security, and SIEM	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Cryptography and Network Security by William Stallings
2. Network Security Essentials by William Stallings

### Reference Books:

1. Applied Cryptography by Bruce Schneier
2. Network Security and Cryptography by Bernard Menezes
3. Principles of Information Security by Michael E. Whitman, Herbert J. Mattord

### Online Resources/E-learning Resources:

2. [Cybrary – Cryptography and Network Security Training](#)

*Danda*

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>		<b>Semester: 6</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Big Data Analytics</b>		<b>Course Code/ Course Type</b>		<b>UBTDSPE328/PEC-III</b>	
<b>Course Pattern:</b>		<b>2025</b>		<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>				<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>-</b>	<b>60</b>

Pre-Requisite:

1. Operating Systems (file systems and memory)
2. Database Management Systems
3. Basics of Python/Java for scripting

**Course Objectives (CO):**

**The objectives of Big Data Analytics are:**

1. Understand the architecture and challenges of big data systems.
2. Describe distributed storage and computation using Hadoop and HDFS.
3. Apply data processing paradigms such as MapReduce and Apache Spark.
4. Use high-level tools like Hive, Pig, and HBase for querying big data.
5. Analyze real-time architectures and cloud-based big data deployment models.

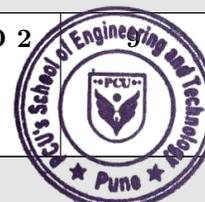

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Explain big data characteristics, ecosystems, and architecture components.
2. Demonstrate data storage and retrieval using HDFS and its CLI commands.
3. Develop data transformation pipelines using MapReduce and Spark RDDs/DataFrames.
4. Create structured queries and analytics workflows using Hive/Pig.
5. Compare Lambda and Kappa architectures for streaming and batch processing.

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Big Data Ecosystem:</b> Definition, Characteristics of Big Data: 5Vs, Challenges in Big Data Storage and Processing, Traditional vs Distributed Systems, Hadoop Ecosystem Overview: HDFS, YARN, MapReduce, Introduction to NoSQL: Document, Key-Value, Column-based, Graph	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Distributed Storage with HDFS:</b> HDFS Architecture: Blocks, NameNode, DataNode, Data Replication and Fault Tolerance, File Read/Write Operations and HDFS CLI Commands, Data Ingestion Tools: Apache Sqoop, Apache Flume, Role of HDFS in Modern Pipelines	<b>CLO 2</b>	
<b>UNIT III</b>		

*Danda*

<b>Data Processing Models – MapReduce and Spark:</b> MapReduce Programming Paradigm: Map, Shuffle, Reduce, Example Jobs: Word Count, Sorting, Joins, Apache Spark Architecture: RDD, DAG, Lazy Evaluation, Spark DataFrames and SparkSQL, Comparison of Spark with MapReduce	<b>CLO 3</b>	<b>9</b>
<b>UNIT IV</b>		
<b>Ecosystem Tools: Hive, Pig, HBase:</b> Hive: Architecture, Query Language (HQL), Partitioning, Bucketing, Pig: Data Flow Model and Basic Scripting, HBase: Column-oriented Storage, Use Cases, CRUD Operations, Real-time Search with ElasticSearch (Intro Only), Zookeeper: Coordination Services for Big Data Tools	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
<b>Big Data Applications and Architectures:</b> Lambda Architecture: Batch + Real-time Layers, Kappa Architecture for Stream Processing, Introduction to Apache Kafka and Spark Streaming, MLlib Overview: Spark Machine Learning Library (without theory), Big Data in Cloud: AWS EMR, GCP Dataproc, Azure HDInsight, Emerging Trends: Data Lakes, Data Mesh, Federated Architectures	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Hadoop: The Definitive Guide by Tom White
2. Big Data: Principles and Paradigms by Rajkumar Buyya

### Reference Books:

1. Learning Spark by Jules S. Damji, Tathagata Das
2. Data-Intensive Text Processing with MapReduce by Jimmy Lin and Chris Dyer
3. Data Analytics with Hadoop by Benjamin Bengfort et al.

### Online Resources/E-learning Resources:

1. [Big Data Computing – NPTEL Course](#)
2. [Hadoop and Spark Hands-on Tutorials – edX/IBM](#)

<b>Name of the Program:</b>		<b>BTECH CSE - AI&amp;DS</b>			<b>Semester: 6</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>System Software</b>			<b>Course Code/ Course Type</b>		<b>MOOCDS601/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
-	-	2	2	2	25	-	25	

Pre-Requisite:

1. Applied Statistical Techniques
2. Introduction to Artificial Intelligence

<b>Course Objectives (CO):</b>	<p><b>The objectives of Compiler Design are:</b></p> <ol style="list-style-type: none"> <li>1. To introduce the fundamentals of system software, machine architectures, assemblers, and loader mechanisms.</li> <li>2. To provide conceptual understanding of language processors, compiler structure, and applications of compiler technology.</li> <li>3. To develop knowledge of lexical analysis techniques and token recognition mechanisms.</li> <li>4. To explain syntax analysis concepts using context-free grammars and parsing techniques.</li> <li>5. To enable implementation of language translators using tools like LEX and YACC along with syntax-directed translation and code generation.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Understand the role of system software, SIC/SIC-XE architecture, assemblers, and basic loader functions.</li> <li>2. Explain compiler design principles including language processors, compiler phases, and applications of compiler technology.</li> <li>3. Apply lexical analysis techniques for token specification, recognition, and input buffering.</li> <li>4. Analyze syntax analysis techniques using context-free grammars, top-down parsers, and bottom-up parsers.</li> <li>5. Design and implement simple language translators using LEX and YACC, and generate intermediate and target code using syntax-directed translation.</li> </ol>

### Course Contents/Syllabus:

Descriptors/Topics	CLO	Hours
<b>UNIT I</b>		
<p><b>Introduction to System Software, Machine Architecture of SIC and SIC/XE:</b> Introduction to System Software, Machine Architecture of SIC and SIC/XE. <b>Assemblers:</b> Basic assembler functions, machine dependent assembler features, machine independent assembler features, assembler design options. <b>Basic Loader Functions.</b></p>	CLO	

*Danda*

<b>UNIT II</b>		
<b>Introduction to Compiler Design:</b> Language Processors, The structure of a compiler, The evaluation of programming languages, The science of building compiler, Applications of compiler technology.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>Lexical Analysis:</b> The role of lexical analyzer, Input buffering, Specifications of token, recognition of tokens.	<b>CLO 3</b>	<b>9</b>
<b>UNIT IV</b>		
<b>Syntax Analysis:</b> Introduction, Context Free Grammars, Writing a grammar, Top Down Parsers, Bottom-Up Parsers.	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
<b>Lex and Yacc:</b> The Simplest Lex Program, Grammars, Parser-Lexer Communication, A YACC Parser, The Rules Section, Running LEX and YACC, LEX and Hand-Written Lexers, Using LEX - Regular Expression, Examples of Regular Expressions, A Word Counting Program, Using YACC – Grammars, Recursive Rules, Shift/Reduce Parsing, What YACC Cannot Parse, A YACC Parser - The Definition Section, The Rules Section, The LEXER, Compiling and Running a Simple Parser, Arithmetic Expressions and Ambiguity. <b>Syntax Directed Translation, Intermediate code generation, Code generation.</b>	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Alfred V. Aho, Monica S. Lam, Ravi Sethi, and Jeffrey D. Ullman, *Compilers: Principles, Techniques, and Tools*, 2nd Edition, Pearson Education.
2. John R. Levine, Tony Mason, Doug Brown, *Lex & Yacc*, 2nd Edition, O'Reilly Media.

### Reference Books:

1. Alfred V. Aho and Jeffrey D. Ullman, *Principles of Compiler Design*, Addison-Wesley.
2. Keith D. Cooper and Linda Torczon, *Engineering a Compiler*, 2nd Edition, Morgan Kaufmann.
3. D. M. Dhamdhere, *Compiler Construction: Principles and Practice*, McGraw-Hill Education.

Pre-Requisite:

1. Applied Statistical Techniques
2. Introduction to Artificial Intelligence

<b>Course Objectives (CO):</b>	<p><b>The objectives of OpenStack and Cloud Operations are:</b></p> <ol style="list-style-type: none"> <li>1. To introduce cloud computing concepts and OpenStack architecture, personas, services, and deployment models.</li> <li>2. To develop understanding of project-based resource management in a multitenant cloud environment.</li> <li>3. To explain OpenStack networking concepts including SDN, network components, and secure connectivity.</li> <li>4. To provide hands-on knowledge of compute and storage resource configuration and management in OpenStack.</li> <li>5. To enable automation, application deployment, and advanced cloud operations using OpenStack services.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. <b>Understand</b> cloud computing fundamentals, OpenStack architecture, core services, and instance deployment concepts.</li> <li>2. <b>Apply</b> project and user management techniques to manage resources in a multitenant OpenStack cloud environment.</li> <li>3. <b>Analyze</b> OpenStack networking components and configure secure network connectivity using SDN concepts.</li> <li>4. <b>Evaluate</b> compute and storage configurations including virtual machines, volumes, snapshots, and shared storage services.</li> <li>5. <b>Design and implement</b> automated cloud application deployments using OpenStack services, cloud-init, and placement mechanisms.</li> </ol>

### Course Contents/Syllabus:

Descriptors/Topics	CLO	Hours
<b>UNIT I</b>		
<b>Introduction to OpenStack and Cloud Fundamentals:</b> Overview of Cloud Computing and OpenStack Platform, OpenStack personas and use cases, Red Hat OpenStack Platform architecture and core services, Single-site overcloud deployment concepts, Launching instances and basic resource overview.	CLO 1	

*Danda*

<b>UNIT II</b>		
<b>Managing Projects and Multitenant Cloud Resources:</b> Creating and managing projects, Managing application environments in a multitenant cloud, Providing cloud user access to projects, Role-based access control (RBAC), Configuring quotas and resource limits, Managing application projects in OpenStack.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>OpenStack Networking Fundamentals:</b> Review of TCP/IP fundamentals, Introduction to Software Defined Networking (SDN), Project, provider, and external networks, Routers, subnets, floating IPs, Managing OpenStack networking services, Configuring secure network connectivity.	<b>CLO 3</b>	<b>9</b>
<b>UNIT IV</b>		
<b>Compute and Storage Management:</b> Defining virtual machines using images and flavors, Launching and verifying non-public and public instances, Configuring ephemeral and persistent disks, Managing volumes and snapshots, Object storage concepts and technologies, Implementing shared storage using NFS.	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
<b>Advanced Cloud Operations and Automation:</b> Managing secure instance access, Automating instance customization using cloud-init, Cloud application architecture concepts, Launching multi-tier cloud application stacks, Managing multi-site overcloud deployments, Configuring placement service for application scheduling, End-to-end cloud deployment and review.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Red Hat Inc., *Red Hat OpenStack Administration I: Core Operations for Domain Operators (CL110)*, Red Hat Training Course Material.
2. Pethuru Raj and Anupama Raman, *OpenStack Cloud Computing – Architecture, Deployment and Operations*, Springer.

### Reference Books:

1. Tom Fifield et al., *OpenStack Operations Guide*, O'Reilly Media.
2. Dan Radez, *OpenStack Essentials*, Packt Publishing.
3. Kenneth Hui, *OpenStack Cloud Administration*, Packt Publishing.

<b>Course Name:</b>		<b>Foreign Language-IV: German</b>		<b>Course Code/ Course Type</b>		<b>UFL302 A/VSEC</b>	
<b>Course Pattern:</b>		<b>2025</b>		<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>				<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>
<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>

Pre-Requisite:

1. Hadoop Ecosystem Awareness
2. CLI Experience with HDFS and Linux
3. Spark/PySpark Programming Basics

**Course Objectives (CO):**

**The objectives of German A2.2 are:**

1. To understand the main points when the standard language is used.
2. Describe dreams, goals and hopes.
3. To implement the acquired grammar topics.
4. To deal with most situations typically encountered in the language region.
5. To Design and create texts in the areas of Personal interest.

**Course Learning Outcomes (CLO):**

**Students would be able to:**

1. Learn advance vocabulary terms.
2. Enhance expression skills in German language.
3. Enhance professional speaking skills of German language.
4. Construct short statements justifying own views and plans.
5. Participate in an interaction associated with the topics such as work, school, leisure time, travelling ex.

### Course Contents/Syllabus:

Descriptors/Topics	CLO	Hours
<b>UNIT I</b>		
<b>Gelernt ist gelernt</b> Different learning problems, exams and presentations Grammar – KII, Genetive	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Sportlich sportlich</b> Different sport activities, connection between sport and different emotions, Grammar – deshalb and trotzdem	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>Zusammen leben</b> Conflicts in an apartment, living in different types and living with pets Grammar –Connectors (als and wenn)	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Gute unterhaltung</b> Describe a picture, discussion on different music styles Grammar – Interrogative articles	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Wie die Zeit vergeht! and Typisch, oder?</b> Express different wishes, write a story, speak about proverbs, speak about cliché Grammar – Relative sentences	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>
