## **Preamble:**

We, at Pimpri Chinchwad University, offer the Bachelor of Technology in Computer science and Engineering program to provide students with a comprehensive education in the science and practice of recent trends in computer engineering. Our mission is to prepare graduates who are competent, compassionate, and committed to promote technology through cutting edge practical assignments.

The B.Tech. in Computer Science and Engineering program integrates knowledge from various disciplines such as mathematics, science, engineering, statistics and programming languages to provide a holistic understanding of the core of computer science in engineering. The curriculum includes courses in databases, computer network, data structures, operating systems, web technologies; cloud computing, compiler construction and artificial intelligence. Students will also have opportunities to gain practical experience through internships, mini and major projects, webinars and various technical competitions like hackathon.

Our program aims to develop student's critical thinking, communication, and leadership skills to enable them to work effectively and to provide sustainable solutions for the real-world technical challenges in the recent industry trends by maintaining professional standards, ethical values and integrity. Graduates of our program will be able to apply their knowledge and skills to work on the cutting-edge technologies of the industry and also to appear for post graduate educations in respective fields.

We are committed to providing a supportive and inclusive learning environment that values diversity, equity, and inclusion. Our faculty members are dedicated to excellence in teaching, research, and technology and are actively engaged in advancing the field of computer and engineering through scholarly activities and professional organizations. We invite students who share our passion to use and create technology for computer engineering to join our program and embark on a journey of learning and growth that will prepare them for rewarding careers and lifelong learning.

# Vision and Mission of Program:

## Vision:

To develop engineers well versed with Critical Theory and Practical's (problem solving ability); and sensitive to National and Global challenges from Inter-disciplinary perspective. To create Industry ready; socially and ethically strong professionals.

## Mission:

Our mission is

- To develop the Computer Professionals by imparting computer engineering knowledge with professional ethics
- To provide the service to the communities to which we belong at local and national levels, combined with a deep awareness of our ethical responsibilities to our profession and to society

## Program Outcome

At the end of program, students should be able to

<b>PO 1</b>	<b>Engineering knowledge:</b> Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
<b>PO 2</b>	<b>Problem analysis:</b> Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
<b>PO 3</b>	<b>Design/development of solutions:</b> Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
<b>PO 4</b>	<b>Conduct investigations of complex problems:</b> Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
<b>PO 5</b>	<b>Modern tool usage:</b> Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
<b>PO 6</b>	<b>The engineer and society:</b> Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
<b>PO 7</b>	<b>Environment and sustainability:</b> Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

<b>PO 8</b>	<b>Ethics:</b> Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
<b>PO 9</b>	<b>Individual and team work:</b> Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
<b>PO 10</b>	<b>Communication:</b> Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
<b>PO 11</b>	<b>Project management and finance:</b> Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
<b>PO 12</b>	<b>Life-long learning:</b> Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## Program Educational Objectives

Program Educational Objectives (PEOs) for a BTECH in Artificial Intelligence & Machine Learning program are as follows:

- **PEO 1:** To provide students with knowledge and skills to become leading experts in the field of computer science engineering.
- **PEO 2:** To provide an innovative and comprehensive curriculum that integrates theoretical knowledge with practical experience, research opportunities, and professional development
- **PEO 3:** To groom the student's overall personality for professional growth.
- **PEO 4:** To inculcate values and ethics among the students and making them aware about their social commitments.

## Program Specific Outcomes

At the end of program, students should be able to

<b>PSO 1</b>	Use knowledge to write programs and integrate them with the hardware/software products in the domains of artificial Intelligent systems, data Science, networking and web technology.
<b>PSO 2</b>	Participate in planning and implement solutions to cater to business specific requirements, displaying team dynamics and professional ethics.

## INDEX

Sr. No.	Type of course	Abbreviations

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Data Structures and Algorithms</b>			<b>Course Code/ Course Type</b>		<b>UBTCE201/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite: 1. Knowledge of C Programming								
<b>Course Objectives (CO):</b>			<b>The objectives of Data Structures and Algorithms are:</b> 1. To study different data structures and analysis of algorithms. 2. To gain the knowledge about the concept of linked list. 3. To use and apply the concept of stack and queue 4. To categorize the use of searching and sorting techniques 5. Implement Non-Linear Data Structures like Trees and graphs using programming language.					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. To use data structure concepts and analyze the algorithms. 2. Perform operations like searching, insertion, deletion, traversing mechanism etc. on various data structures 3. Apply and analyze use of stack and queue with their applications 4. Apply and analyze use of linked list as a data structure 5. Apply advanced data structure strategies to solve real world problems.					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I: Introduction</b>		
Introduction to Data Structures: General Problem-Solving Concepts, Types of Problems, Problem Solving Concepts for the Computer. Concept of data, Types of data structures: Concept of Primitive and non-primitive, linear and Nonlinear, static and dynamic, persistent and ephemeral data structures. Algorithm: Characteristics of algorithm, Pseudo code, Flowchart. Analysis of algorithm: Frequency count and its importance in analysis of an algorithm, Time complexity & Space complexity of an algorithm Big 'O', Omega and Theta notations	<b>CLO 1</b>	<b>9</b>
<b>UNIT II: Linked List</b>		
Understanding the basics of Linked List, Comparison between array and linked list. Types and basic operations of Linked Lists: 1. Single Linked List. 2. Double Linked List. 3. Circular Linked List. 4. Circular Double Linked List. Basic operations: Creation. Insertion. Deletion, Traversing.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III: Stack &amp; Queue</b>		
Stack: Concept of stack, Operations on stack (push, pop and display) Applications of stack: Converting expressions from infix to postfix, infix to prefix form, evaluating postfix or prefix form. Queue: Concept of queues as ADT, Operations on queue (enqueue, dequeue and display) Implementation of queue using array, Concept of circular queue, double ended queue, Applications of queue: priority queue.	<b>CLO 3</b>	<b>9</b>

<b>UNIT IV: Searching &amp; Sorting</b>		
Searching and sorting: Need of searching and sorting, Concept of internal and external sorting. Searching methods: Linear and Binary search algorithms Sorting methods: Bubble, Selection, Insertion, Quick, Merge. Comparison of all sorting methods. Analyze Bubble Sort, Insertion sort, Quick Sort for Best, Worst and Average case.	<b>CLO 4</b>	<b>9</b>
<b>UNIT V: Tree &amp; Graph</b>		
Tree: Trees and binary trees-concept and terminology, Expression tree, Binary tree as an ADT, Binary search tree, Binary search tree as ADT (Insert Search Delete, level wise Display) Threaded binary tree: Concept of threaded binary tree (inorder, preorder and postorder), Applications of trees. Graph: Concept and terminologies, Breadth First Search traversal, Depth First Search traversal, Prim's and Kruskal's algorithms for minimum spanning tree, shortest path using Dijkstra's algorithm.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

### Learning Resources:

#### Text Books:

1. Herbert Schildt, "C++: The Complete Reference", McGraw Hill Education, 2003.
2. John R. Hubbard, "Data Structures with C++", Schaum's Outlines, Tata McGraw Hill Education, 2000.

#### Reference Books:

1. Michael T. Goodrich, Roberto Tamassia, David Mount, "Data Structures and Algorithms in C++", Wiley India Pvt. Ltd., 2004.
2. Seymour Lipschutz, "Data Structures", Schaum's Outlines, Tata McGraw Hill Education, 2006

#### Online Resources/E-learning Resources:

1. <https://nptel.ac.in/courses/106102064> Data Structures and Algorithms, IIT Delhi Prof. Naveen Garg  
Date of Reference 18-4-2024
2. <https://nptel.ac.in/courses/106103069> Date of Reference 18-4-2024

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Data Structures and Algorithms Laboratory</b>			<b>Course Code/ Course Type</b>		<b>UBTCE202/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assessment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
-	1	-	1	2	25	-	25	
Pre-Requisite:								
1. Basic knowledge of Programming in C								
<b>Course Objectives (CO):</b>			<b>The objectives of Data Structures and Algorithms Laboratory are:</b>					
			<ol style="list-style-type: none"> <li>To learn the fundamentals of the Python programming language.</li> <li>To create Python list tuple to represent compound data. solving, and learning methods in solving engineering problems.</li> <li>To write and execute simple as well as complex Python programs.</li> <li>To analyze the concepts of procedural as well as object-oriented Python programs.</li> <li>To perform files handling operations and handle exceptions using Python.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>Analyze algorithms and to determine algorithm correctness and time efficiency class.</li> <li>Implement abstract data type (ADT) and data structures for given application.</li> <li>Design algorithms based on techniques like brute-force, divide and conquer, greedy, etc.).</li> <li>Solve problems using algorithmic design techniques and data structures.</li> <li>Analyze of algorithms with respect to time and space complexity.</li> </ol>					

### Practical Plan:

Practical Number	Practical Title	Week Number	Details	CLO	Hours
1	Practical1 :	1	WAP to demonstrate push, pop, traverse operations performed on stack.	CLO1	2
2	Practical 2:	2	WAP to implement linear / circular queue using array.	CLO1	2
3	Practical 3:	3	WAP to perform insertion and deletion in a single and double linked list	CLO2	2
4	Practical 4:	4,5	WAP to sort an array of N elements using Selection sort.	CLO 2	4
5	Practical 5:	6	WAP to sort an array of N elements using Insertion sort	CLO3	2
6	Practical 6:	7	WAP to sort an array of N elements using Quick sort	CLO3	2
7	Practical 7:	8	WAP to sort an array of N elements using Merge sort.	CLO4	2

8	Practical 8:	9	Write a program that uses both recursive and non-recursive functions to perform the following searching operations for a key value in a given list of integers: i. Linear search ii. Binary search	CLO4	2
9	Practical 9:	10	Write a program to perform the following operations: 1.Insert an element into a binary search tree. 2.Delete an element from a binary search tree. 3.Search for a key element in a binary search tree.	CLO5	2
10	Practical 10:	11,12	i.To write a python program to handle Exceptions using Python Built-in Exceptions. ii. To implement Depth First Search / Breadth First Search Algorithm	CLO5	4
11	Mini Project:	13,14,15	Mini Project /Task	CLO1-5	6

## Learning Resources:

<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Elaborate the features of Python programming language.</li> <li>2. Apply the conditional and looping constructs using python.</li> <li>3. Use the multidimensional array and string operations using python.</li> <li>4. Analyze and apply the object-oriented concepts using python programming.</li> <li>5. Apply the file handling and exception handling using python programming.</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Python:</b> Python Introduction- Features, Identifiers, Reserved words, Indentation, Comments, Built-in Data types and their Methods: Strings, List, Tuples, Dictionary, and Set - Type Conversion- Operators. Execution of a Python, Program, Writing Our First Python Program, Statements Precedence of Operators.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Decision Making and looping:</b> Conditional (if), Alternative (if-else), Chained Conditional (if-elif-else); Iteration: state, while, for, match case, break, continue, pass; Math and Random number functions.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>Array and String:</b> Arrays in Python, Strings and Characters. Strings: String Slices, Immutability, String Functions and Methods, Lists as Arrays, Sum an Array of Numbers, Linear Search, Binary Search	<b>CLO 3</b>	<b>9</b>

<b>UNIT IV</b>		
<b>Function and OOPs concept:</b> User defined functions - function arguments & its types, lambda functions and list comprehension, OOPs Concepts -Class and Objects, Constructors – Data hiding- Data Abstraction- Inheritance.	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
Text Files, Reading and Writing Files, Format Operator, Errors and Exceptions, Handling Exceptions, Modules, Packages; Illustrative Programs: Word Count, Copy File.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Y. Daniel Liang, “Introduction to Programming using Python”, Pearson, 2012.
2. Wes McKinney, “Python for Data Analysis: Data Wrangling with Pandas, NumPy, and Python”, O’Reilly, 2nd Edition, 2018.

### Reference Books:

1. Wesley J. Chun, “Core Python Programming”, Prentice Hall, 2006
2. Mark Lutz, “Learning Python”, O’Reilly, 4th Edition, 2009

### Online Resources/E-learning Resources:

<b>Course Learning Outcomes (CLO):</b>				<b>Students would be able to:</b>				
				<ol style="list-style-type: none"> <li>1. Students would be able apply Python built-in data types of the python programming.</li> <li>2. Use the conditional and looping constructs using python programming.</li> <li>3. Implement and manipulate the arrays using python programming.</li> <li>4. Analyze and apply the object-oriented concepts using python programming.</li> <li>5. Apply the file handling and exception handling using python programming.</li> </ol>				

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Data structure	1	Write a python program to perform Creation, indexing, slicing, concatenation and repetition operations on Python built-in data types: Strings, List, Tuples, Dictionary, and Set.	CLO 1	2
2	Control Statements	2	Write a python program to Solve problems using decision and looping statements.	CLO 1	2
3	Math and Random Module	3	To write a python program to handle numerical operations using math and random number functions.	CLO 2	2
4	Arrays	4	Write a python program to implement array module and Numpy.	CLO 3	2
5	Lambda function and List comprehension	5	To write a python program to perform lambda functions and list comprehension.	CLO 3	2

6	User Defined Functions	6	Write a python program to Create user-defined functions with different types of function arguments with example.	CLO 4	2
7	OOP	7	Write a python program to Implement classes and objects using inheritance.	CLO 4	2
8	Packages and Modules	8, 9	Write a python program to Create packages and import modules from packages to solve real problems.	CLO 4	4
9	File Handling Operations	10	Write a python program to perform File manipulations- open, close, read, write, append and copy from one file to another.	CLO 5	4
10	Exception Handling Operations	11,12	Write a python program to handle Exceptions using Python Built-in Exceptions.	CLO 5	2
11	Mini Project	13, 14, 15	Implement mini project in a group of 3 to 4 students	CLO 1-5	6

### Learning Resources:

Identify the architecture and pin configuration of 8086 microprocessor</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Digital Fundamentals :</b> Number Systems –Decimal, Binary, Octal, Hexadecimal, 1’s and 2’s complements, Codes –Binary, BCD, Excess 3, Gray, Alphanumeric codes, Boolean theorems, Logic gates, Universal gates, Sum of products and product of sums, Minterms and Maxterms, Karnaugh map Minimization and Quine.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Combinational Circuit Design:</b> Design of Half and Full Adders, Half and Full Subtractors, Binary Parallel Adder –Carry look ahead Adder, BCD Adder, Multiplexer, Demultiplexer, Magnitude Comparator, Decoder, Encoder, Priority Encoder.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>Synchronous Sequential Circuits:</b> Flip flops –SR, JK, T, D, Master/Slave FF –operation and excitation tables, Triggering of FF, Analysis and design of clocked sequential circuits, state minimization, Design of Counters-Ripple Counters, Shift registers, Universal Shift Register.	<b>CLO 3</b>	<b>9</b>

UNIT IV		
<b>Logic Families:</b> Unipolar and Bipolar Logic Families, Characteristics of Digital ICs: Speed, power dissipation, figure of merits, fan-out, Current and voltage parameters, Noise immunity, operating temperature range, power supply requirements, Programmable Logic Devices - Programmable Logic Array (PLA), Programmable Array Logic (PAL).	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>8086 Microprocessor:</b> Introduction to 8086 architecture, pin description, External memory interfacing, Maximum mode bus cycle, memory interfacing, Minimum mode System configuration, Maximum mode system configuration, Interrupt's processing, instruction set.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

### Learning Resources:

#### Text Books:

1. Digital Logic And Computer Design By M. Morris Mano (2nd Edition), PHI
2. Modern Digital Electronics By R.P. Jain, Mc Graw Hill
3. Digital Electronics By Malvino Leach, McGraw Hill

#### Reference Books:

1. Thomas. L. Floyd ,“Digital Fundamentals” , Pearson ,11th Edition.
2. Digital Systems: Principles and Applications, Book by Ronald J Tocci
3. DouglasV.Hall, —Microprocessors and Interfacing, Programming and Hardware, TMH,2012.

<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
-	1	-	1	1	25	-	25	
Pre-Requisite: 1. Basic knowledge of Programming in C								
<b>Course Objectives (CO):</b>			<b>The the objective of Digital Logic &amp; Microprocessor Laboratory are:</b>  1. To understand the basics of Digital fundamentals, Boolean algebra, its applications and combinational logic circuits in digital systems. 2. To Study various combinational digital circuits using logic gates. 3. To Study, analysis and design of clocked sequential circuits. 4. To get acquaint students with the asynchronous Sequential Circuits and Design of Hazard free circuits. 5. To learn the architecture and pin configuration of 8086 Microprocessor.					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Use digital electronics in the present contemporary world. 2. Design various combinational digital circuits using logic gates. 3. Do the analysis and design procedures for synchronous and asynchronous sequential circuits. 4. Use the semiconductor memories and related technology. 5. To identify the architecture and pin configuration of 8086 Microprocessor					

### Practical Plan:

Practical Number	Practical Title	Week Number	Details	CLO	Hours
1	Practical 1	1	Introduction: Study of logic gates.	CLO1	2
2	Practical 2	2	Simplification, Realization of Boolean expressions using Logic gates / Universal gates. 1. Realization of half/full adder using logic gates	CLO1	2
3	Practical 3	3	TSimplification, Realization of Boolean expressions using Logic gates / Universal gates. 1. Realization of half/full Subtractor using logic gates	CLO1	2
4	Practical 4	4	1. Realization of parallel adder /Subtractor using 7483 chip	CLO2	2
5	Practical 5	5	1. BCD to Ex-3 code conversion and vice versa .Realization of parallel adder /Subtractor using 7483 chipb.BCD to Ex-3 code conversion and vice versa	CLO2	2
6	Practical 6	6	Realization of Binary to Gray code converter & vice versa	CLO2	2

7	Practical 7	7	1. MUX using 74153 for Arithmetic circuits	CLO3	2
8	Practical 8	8	DEMUX using 74139 for code converter	CLO3	2
9	Practical 9	9	Realization of one/two bit comparator & study of 7485 magnitude Comparator.	CLO3	2
10	Practical 10	10	Use of decoder chip to drive LED/LCD display	CLO3	2
11	Practical 11	11	Priority Encoder	CLO3	2
12	Practical 12	12	Truth table verification of flip-flops 1. JK master slave	CLO4	2
13	Practical 13	13	Truth table verification of flip-flops T-type	CLO4	2
14	Practical 14	14	To study 8086 microprocessor system.	CLO5	2
15	Practical 15	15	Assembly language program using 8086 MASM software and 8086 microprocessor kit- Addition,subtraction,multiplication,division	CLO5	2

### Learning Resources:

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Signal System</b>			<b>Course Code/ Course Type</b>		<b>UBTCEOE203/OE</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assessment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite: 1. Signal theory, Math								
<b>Course Objectives (CO):</b>			<b>The objectives of Signal System are:</b> 1. To recall the basic knowledge about the different type of signals 2. To recognize the system analysis in frequency domain. 3. To apply the knowledge of Fourier and Laplace transform. 4. To analyze correlation and spectral density. 5. To evaluate probability, random variables & signals.					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. To identify different type of signals. 2. Explain the system analysis in frequency domain. 3. Apply knowledge of Fourier and Laplace transform. 4. Analyze correlation and spectral density 5. Evaluate the probability, random variables & signals.					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Signals and Systems:</b> Definition of signals and systems, communication and control systems as examples, Classification of signals: Continuous time and discrete time, even, odd, periodic and non-periodic, deterministic and non-deterministic, energy and power. Operations on signals: Amplitude scaling, addition, multiplication, differentiation, integration (accumulator for DT), time scaling, time shifting and folding, precedence rule. Elementary signals: exponential, sine, step, impulse and its properties, ramp, rectangular, triangular, signum, sinc. Systems: Definition, Classification: linear and non linear, time variant and invariant, causal and non-causal, static and dynamic, stable and unstable, invertible.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>System Analysis:</b> System modeling: Input output relation, impulse response, block diagram, integro-differential equation and state-space representation. Definition of impulse response, convolution integral, convolution sum, computation of convolution integral using graphical method for unit step to unit step, unit step to exponential, exponential to exponential and unit step to rectangular, rectangular to rectangular only. Computation of convolution sum by all methods.	<b>CLO 2</b>	<b>9</b>

UNIT III		
<b>System Analysis in Frequency Domain using Fourier Transform &amp; Laplace Transform:</b> Definition and necessity of CT and DT Fourier series and Fourier transforms. Analogy between CTFS, DTFS and CTFT, DTFT. CT Fourier series, CT Fourier transform and its properties, problem solving using properties, amplitude spectrum, phase spectrum of the signal and system. Interplay between time and frequency domain using sinc and rectangular signals. Limitations of FT and need of LT and ZT, , ROC and pole zero concept.	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Correlation and Spectral Density:</b> Definition of Correlation and Spectral Density, correlation, analogy between correlation, covariance and convolution, conceptual basis, autocorrelation, cross correlation, energy/power spectral density, properties of correlation and spectral density, inter relation between correlation and spectral density..	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Probability, Random Variables and Random Signals:</b> Experiment, sample space, event, probability, conditional probability and statistical independence. Random variables: Continuous and Discrete random variables, cumulative distributive function, Probability density function, properties of CDF and PDF. Statistical averages, mean, moments and expectations, standard deviation and variance. Probability models: Uniform, Gaussian, Binomial.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

### Learning Resources:

#### Text Books:

1. Simon Haykins and Barry Van Veen, "Signals and Systems", 2nd Edition, Wiley India.
2. Simon Haykins, "Introduction to Analog and Digital Communications", Wiley India.

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Practical 1	1	Sketch and write Defining mathematical expression for the following signals in CT and DT using MATLAB- Unit step, rectangular, exponential, signum, sine, sinC, triangular, unit impulse, unit ramp.	CLO1	2
2	Practical 2	2	Take any two CT and DT signals and perform the following operation Amplitude scaling, addition, multiplication, differentiation, integration (accumulator for DT), time scaling, time shifting and folding	CLO2	2
3	Practical 3	3	Express any two system mathematical expressions in input output relation form and determine whether each one of them is, Memory less, Causal, Linear, Stable, Time in variant, Invertible	CLO3	2
4	Practical 4	4	Express any two system mathematical expressions in input output relation form and determine whether each one of them is, Memory less, Causal, Linear, Stable, Time in variant, Invertible	CLO3	2

5	Practical 5	5	Express any two system mathematical expressions in impulse response form and determine whether each one of them is, Memory less, Causal, Linear, Stable, Time in variant, Invertible	CLO3	2
6	Practical 6	6	State and prove the properties of Fourier Transform. Take rectangular and sinc signal as examples and demonstrate the applications of CTFT properties. And also demonstrate the interplay between the time and frequency domain.	CLO4	2
7	Practical 7	7	State and prove the properties of Fourier Transform. Take rectangular and sinc signal as examples and demonstrate the applications of CTFT properties. And also demonstrate the interplay between the time and frequency domain.	CLO4	2
8	Practical 8	8	State and prove the properties of Laplace Transform. Take any example of a system in time domain and demonstrate the application of LT in system analysis	CLO4	2
9	Practical 9	9	State and prove the properties of Laplace Transform. Take any example of a system in time domain and demonstrate the application of LT in system analysis	CLO4	2
10	Practical 10	10	Design and implement a complete adaptive visualization solution for a dataset (e.g., health data, IoT, education analytics)	CLO4	2
11	Practical 11	11	State and prove the properties of Laplace Transform. Take any example of a system in time domain and demonstrate the application of LT in system analysis	CLO4	2
12	Practical 12	12	Find the following for the given energy signal- Autocorrelation, Energy from Autocorrelation, Energy from definition, Energy Spectral Density directly	CLO5	2
13	Practical 13	13	Find the following for the given energy signal- Autocorrelation, Energy from Autocorrelation, Energy from definition, Energy Spectral Density directly	CLO5	2
14	Practical 14	14	Find the following for the given energy signal- Autocorrelation, Energy from Autocorrelation, Energy from definition, Energy Spectral Density directly	CLO5	2

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Discrete Structures</b>			<b>Course Code/ Course Type</b>		<b>UBTCE223/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assessment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>20</b>	<b>30</b>	<b>-</b>	
Pre-Requisite:								
1. Determinants, Matrices, Limits, continuity, Differentiation								
<b>Course Objectives (CO):</b>			<b>The objectives of Discrete Structures are:</b>					
			<ol style="list-style-type: none"> <li>To familiarize the students with the concepts and techniques of logics &amp; sets.</li> <li>To recognize relations and its real-life application.</li> <li>To comprehend Algebraic structure and its application.</li> <li>To acquire the knowledge of graph theory</li> <li>To acquire the knowledge of trees to understand the concepts of different types of algorithms and its applications that would enhance analytical thinking power.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>Explain the logic, normal forms and its application.</li> <li>Comprehend the relations &amp; functions.</li> <li>Comprehend the algebraic structures.</li> <li>Comprehend &amp; apply the knowledge of graph theory in data structure and other core subjects.</li> <li>Solve traversing problems, searching by using the concept of Trees.</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Logic</b> : Propositions and Connectives, Truth table, laws of Propositions, Logical Equivalence, Normal Forms: DNF, CNF, PCNF & PDNF Logical implication, Quantifiers, Application of Propositional logic.	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Relation and Functions:</b> Relation, representation of relation, types, Equivalence relation, Equivalence class, Partitions, Partial ordering relation, Hasse diagram, Lattice, Function and types of Functions.	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>Algebraic structures:</b> Algebraic structures, Semi group, Monoid, Group, abelian group, cyclic group, Coding Theory.	<b>CLO 3</b>	<b>6</b>

UNIT IV		
<b>Graph and Applications:</b> Introduction, Graph models, Hand shaking lemma, Types of graphs, Matrix representation of Graphs, adjacency and incidence Matrix, Isomorphism, Connectivity, Eulerian and Hamiltonian Graphs, Shortest path, Travelling Salesman Problem, Dijkstra's algorithm, Planar graph and Euler formula.	<b>CLO 4</b>	<b>6</b>
UNIT V		
<b>Trees:</b> Introduction, properties, Rooted tree, Tree Traversal, path length, weighted tree, prefix code, Huffman coding, spanning tree, Minimal spanning tree, Kruskal algorithm, Prim's algorithm, cut set, The Max flow- Min cut Theorem (Transport Network) Application of tree.	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Computer Organization and Architecture</b>			<b>Course Code/ Course Type</b>		<b>UBTCE219/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>20</b>	<b>30</b>	<b>-</b>	
Pre-Requisite: 1. NIL								
<b>Course Objectives (CO):</b>			<b>The the objective of Computer Organization and Architecture are:</b> 1. To recognize the components of Computer 2. To articulate the principles of computer organization and the basic architectural concepts 3. To learn simple register transfer language to specify various computer operations 4. To interpret and summarize the pipelining concept and multiprocessor systems 5. To design, and program a simple digital computer ALU operation					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Student will learn the concepts of computer organization for several engineering applications 2. Student will develop the ability and confidence to use the fundamentals of computer organization as a tool in the engineering of digital systems. 3. An ability to identify, formulate, and solve hardware and software computer engineering problems using sound computer engineering principle 4. To impart the knowledge on micro programming 5. Comprehend the concepts of advanced pipelining techniques					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Fundamentals Of Computers</b> Basic Functional units of Computers: Types and generation of computers, Functional units, basic Operational concepts, Bus structures. Software, Performance, Architecture: Von Neumann and Harvard architecture. Data Representation: Signed number representation, fixed and floating-point representations. Booth's Algorithm, Restoring Algorithm, Non-Restoring algorithm	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>THE MEMORY SYSTEM</b> Basic concepts of semiconductor RAM memories Memory Hierarchy, Primary memory, Secondary Memory and its types, Magnetic Tape, Magnetic Disk, Optical disk, magnetic-optical, and other modern disks etc, Cache memories and its types, Cache coherence and Virtual Memory, Paging Replacement algorithm, DMA, DMA Transfer modes, sequential access, and direct access storage device.	<b>CLO 2</b>	<b>6</b>

<b>UNIT III</b>		
<b>REGISTER TRANSFER LANGUAGE AND MICRO-OPERATIONS</b> Register Transfer Language and Micro Operations: Introduction to RTL- Registers, Bus and memory transfers, Micro operations: Arithmetic, Logic, and Shift micro-operation, Arithmetic logic shift unit	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Central Processing Unit Organization</b> Basic Computer Organization: Computer Registers and types, Instructions, Instruction cycle, Types of Instructions: Memory Reference Instructions, Input & output, Timing and control, Interrupts, Central Processing Unit organization: General Register Organization, stack organization, Addressing modes and its types, Data Transfer and Manipulation, Program Control, CISC and RISC processors Control unit design: Design approaches,Control memory, Address sequencing Parallelism, Throughput and Speedup .	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>MULTI-PROCESSOR ORGANIZATION</b> Overview of 8086 microprocessor, Instruction Pipeline, Pipeline hazards, Hazards, Time Space Diagram, instruction Pipelining, Arithmetic Pipelining, Multiprocessor and Multicore operation, Loosely-coupled (distributed memory) multiprocessor system, Tightly-coupled (shared memory) multiprocessor system,SCSI, PCI, USB.	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. Computer Organization – Carl Hamacher, ZvonksVranesic, SafeaZaky, Vth Edition, McGraw Hill
2. Computer Organization and Architecture – William Stallings Sixth Edition, Pearson/PHI

### Reference Books:

1. Computer Systems Architecture – M.Moris Mano, IIIrd Edition, Pearson/PHI
2. Structured Computer Organization – Andrew S. Tanenbaum, 4th Edition PHI/Pearson
3. Fundamentals or Computer Organization and Design, - SivaraamaDandamudi Springer Int. Edition.
4. Computer Architecture a quantitative approach, John L. Hennessy and David A. Patterson, Fourth Edition

### Online Resources/E-learning Resources:

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Operating system</b>			<b>Course Code/ Course Type</b>		<b>MOOCCE303</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>25</b>	<b>-</b>	<b>25</b>	

Pre-Requisite:

1. Knowledge of Computer Architecture and Digital Logic
2. Proficiency in C/C++ or Python

<b>Course Objectives (CO):</b>	<b>The the objective of Operating system are:</b> <ol style="list-style-type: none"> <li>1. Understand the fundamental concepts and responsibilities of an operating system</li> <li>2. Explore how operating systems manage hardware resources such as CPU, memory, storage, and I/O devices</li> <li>3. Gain insights into process scheduling, synchronization, and deadlock prevention techniques</li> <li>4. Learn how file systems and memory management strategies are implemented in real-world OSs.</li> <li>5. Develop hands-on skills by analyzing and building small components of an operating system using labs and simulations</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<b>Students would be able to:</b> <ol style="list-style-type: none"> <li>1. Explain the architecture and functions of modern operating systems</li> <li>2. Implement and simulate key OS concepts such as process scheduling and memory allocation</li> <li>3. Analyze and apply synchronization techniques for process and thread management.</li> <li>4. Understand and evaluate file systems, I/O management, and protection mechanisms.</li> <li>5. Demonstrate the ability to solve real-world OS problems using practical tools and test environments</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Operating Systems &amp; Processes</b> Evolution of OS and types (batch, multitasking, real-time), OS as a resource manager, Processes and threads, Context switching and states	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>CPU Scheduling and Concurrency</b> Process scheduling: FCFS, SJF, Round Robin, Multilevel. Multithreading and CPU burst prediction. Process synchronization: critical section, semaphores, mutexes. Deadlocks: detection, prevention, avoidance	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		

<b>Memory Management</b> Contiguous and non-contiguous memory allocation, Paging and segmentation, Virtual memory and page replacement algorithms (FIFO, LRU), Swapping and memory fragmentation	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>File Systems and Storage Management</b> File concepts, file access methods, and directory structure, Disk scheduling algorithms (FCFS, SSTF, SCAN), File system implementation: FAT, i-nodes, Mounting, allocation methods, and protection. .	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Security, I/O and Virtualization</b> I/O structure, polling vs. interrupt-driven I/O, DMA and device drivers, OS-level security: authentication, access control, Basics of virtualization and containers.	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

### Learning Resources:

#### Text Books:

1. "Mastering Microsoft Power BI" by Brett Powel

#### Reference Books:

1. "Modern Operating Systems" by Andrew S. Tanenbaum and Herbert Bos
2. "Operating Systems: Three Easy Pieces" by Remzi H. Arpaci-Dusseau and Andrea C. Arpaci-Dusseau (free online)
3. "Linux Kernel Development" by Robert Love

#### Online Resources/E-learning Resources:

1. Introduction to Operating Systems Specialization (Duke University)

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Linux, OpenShift &amp; System Administration Fundamentals</b>			<b>Course Code/ Course Type</b>		<b>MOOCCE304</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>25</b>	<b>-</b>	<b>25</b>	

Pre-Requisite:

1. Basic understanding of operating systems and networking concepts

<b>Course Objectives (CO):</b>	<p><b>The the objective of Linux, OpenShift &amp; System Administration Fundamentals are:</b></p> <ol style="list-style-type: none"> <li>1. To provide foundational knowledge of Linux operating systems and system administration</li> <li>2. To introduce OpenShift as a platform for developing and deploying containerized applications</li> <li>3. To equip students with practical skills for managing Linux systems, including installation, configuration, and troubleshooting</li> <li>4. To integrate container orchestration principles with real-world applications using OpenShift</li> <li>5. To prepare students for entry-level certifications in Linux system administration and container management</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Demonstrate proficiency in basic Linux commands and shell scripting</li> <li>2. Install, configure, and manage a Linux system for users, processes, and file systems</li> <li>3. Develop and deploy containerized applications using OpenShift.</li> <li>4. Apply fundamental system administration skills, including user management and system security..</li> <li>5. Troubleshoot and resolve common issues in Linux and containerized environments</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Linux Fundamentals</b> Overview of Linux Operating System(Linux Distributions,Kernel and Shell Basics.),Command Line Essentials (File System Navigation,File Manipulation Commands (ls, cp, mv, rm, chmod, chown), Text Editors and Utilities (Introduction to vi/vim,grep, sed, awk for Text Processing), Basic Shell Scripting -(Creating and Executing Shell Scripts,Using Variables and Conditionals,Hands-on Exercise: Write and execute shell scripts for file management tasks).	<b>CLO 1</b>	<b>9</b>

UNIT II		
<b>Linux System Administration Essentials</b> Installing Linux and Managing Boot Process –(Partitioning and Filesystems,GRUB Configuration) ,User and Group Management (Adding, Deleting, and Modifying Users and Groups,Permissions and Access Control Lists (ACLs)),Process and Service Management-(Monitoring and Managing Processes (ps, top, kill),Starting, Stopping, and Enabling Services with systemctl), Basic Network Configuration –(Configuring IP Addresses and Hostnames,Understanding Network Tools (ping, netstat, ss) Hands-on Exercise: Install a Linux system and configure basic services).	<b>CLO 2</b>	<b>6</b>
UNIT III		
<b>Introduction to OpenShift Applications</b> Understanding Containers and OpenShift Basics-(Introduction to Containers and Kubernetes,OpenShift Architecture and Features),Deploying Applications on OpenShift-(Creating Projects and Deployments,Managing Pods and Services),OpenShift CLI and Web Console -(Using oc Commands for Deployment,Configuring Applications via OpenShift Console),Scaling and Managing Applications-(Horizontal and Vertical Scaling,Managing ConfigMaps and Secrets,Hands-on Exercise: Deploy a simple web application on OpenShift using the CLI and Web Console).	<b>CLO 3</b>	<b>6</b>
UNIT IV		
<b>Advanced Linux System Administration</b> File System and Storage Management –(Creating and Managing Partitions and Logical Volumes (LVM),Mounting File Systems and NFS Configuration),System Security-(Configuring Firewall and SELinux Policies,Managing SSH Access and Key-Based Authentication),Backup and Restore Techniques -(Using tar, rsync, and cron for Scheduled Backups), Troubleshooting Linux Systems – (Analyzing Logs and Diagnosing Boot Issues,Common Commands for Problem Resolution,Hands-on Exercise: Configure LVM and set up secure remote access using SSH). .	<b>CLO 4</b>	<b>6</b>
UNIT V		
<b>Integration and Capstone Project</b> Integrating Linux with OpenShift – (Managing Linux Nodes in an OpenShift Cluster,Monitoring and Logging in OpenShift and Linux), OpenShift Application Lifecycle Management-(Building and Deploying Containerized Applications with CI/CD,Using Operators for Application Management),Performance Optimization-(Optimizing System Resources in Linux,Managing Resource Quotas in OpenShift), Capstone Project: -Deploy and manage a multi-tier application on OpenShift using Linux administration techniques	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. "Red Hat RH124: Red Hat System Administration I" (Official Course Material)
2. "Red Hat DO101: Introduction to OpenShift Applications" (Official Course Material)

### Reference Books:

1. "Linux Bible" by Christopher Negus
2. "UNIX and Linux System Administration Handbook" by Evi Nemeth, Garth Snyder, Trent R. Hein, and Ben Whaley
3. "OpenShift for Developers: A Guide for Kubernetes Application Development" by Grant Shipley and Graham Dumpleton

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Community Engineering Project</b>			<b>Course Code/ Course Type</b>		<b>UBTCE209/ CEP</b>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Community Engineering:</b> Overview of course objectives, expectations, and project guidelines Introduction to community-based participatory research and design principles Case studies of successful community engineering projects	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Needs Assessment and Stakeholder Engagement:</b> Methods for conducting community needs assessments and asset mapping, Techniques for engaging diverse stakeholders in the design process, Ethical considerations in working with communities.	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>Project Planning and Design:</b> Project scoping, goal setting, and defining success criteria, Engineering design processes and methodologies, Incorporating sustainability principles into project design	<b>CLO 3</b>	<b>6</b>

UNIT IV		
<b>Implementation and Collaboration:</b> Project management techniques, including scheduling, budgeting, and resource allocation, Interdisciplinary collaboration and team dynamics, Effective communication with community partners and project stakeholders .	<b>CLO 4</b>	<b>6</b>
UNIT V		
<b>Project Execution and Monitoring:</b> Prototyping and testing of project solutions, Monitoring project progress and making adjustments as needed, Documentation and record-keeping for project evaluation <b>Impact Evaluation and Reflection:</b> Methods for assessing the social, economic, and environmental impact of community engineering projects, Reflective practices and peer feedbackn	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

### Assesment:

1. Project Proposal: Written proposal outlining the project scope, objectives, and methodology (20)
2. Project Implementation: Development and implementation of the digital solution, including documentation and code repository (30)
3. Final Report: Written report summarizing the project process, outcomes, and impact assessment (30)
4. Presentation: Oral presentation of project findings and demonstration of the digital

<b>Name of the Program:</b>		<b>B.TECH CSE</b>			<b>Semester: 3</b>		<b>Level: UG/PG</b>	
<b>Course Name:</b>		<b>German-I</b>			<b>Course Code/ Course Type</b>		<b>UFL201A/AEC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	
Pre-Requisite:								
<b>Course Objectives (CO):</b>			<b>The the objective of German A1.2 are:</b> 1. To remember new words and their spellings. 2. To analyze the new concepts. 3. To apply the basic vocab and grammar concepts. 4. To comprehend the German text. 5. To create basic sentences in German.					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Spell simple words in German 2. Can understand everyday expressions. 3. Able to frame simple sentences in German language. 4. Can introduce themselves and others. 5. Can answer questions about themselves.					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Guten Tag:</b> Speak about yourself and others, Speak about Countries and Languages Grammar – Sentence formation and verbs usage	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Freunde, Kollegen und Ich:</b> Speak about your Hobbys, To fix a meeting, Speak about work and Profession, To creat a profile on Internet Grammar – How to use ‘The’ in german, Singular and plural forms of Nouns	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>In der Stadt:</b> To get to know about Cities and Places, how to find way and understand directions, learn international words Grammar – Negations (how to use NO in german), Definite articles, indefinite articles	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Kleidung und Mode</b> Speak about cloths and shopping, lead a discussion during cloths shopping, discussion in departmental store, understand and research information about Berlin, Grammar – Separable and non-separable verbs	<b>CLO 4</b>	<b>6</b>

**UNIT V**

**Tag für Tag & Zeit mit Freunden:** Clock timings, To speak about family and friends, Daily routine To speak about free time activity, to understand the specific information from the text, to order and to pay in a restaurant Grammar – Possessive article, Modal verbs, use of on, at, from... till, Separable verbs and past tense

**CLO 5****6****Total Hours****30****Learning Resources:****Text Books:**

Pre-Requisite:								
1. Desire to get acquainted with the Japanese language.								
<b>Course Objectives (CO):</b>			<b>The the objective of Basic Japanese language skill are:</b>					
			<ol style="list-style-type: none"> <li>1. To meet the needs of ever-growing industry, with respect to language support.</li> <li>2. To get introduced to Japanese society and culture through language.</li> <li>3. To acquire competitive edge in career choices.</li> <li>4. To participate effectively &amp; responsibly in a multi-cultural world.</li> <li>5. To enable learners to communicate effectively in Japanese language.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Read and Write Hiragana script.</li> <li>2. Write and Speak basic sentences.</li> <li>3. Comprehend and speak about time, hobbies, likes and dislikes.</li> <li>4. Write basic kanji.dialogues indicating how they are used in actual conversation</li> <li>5. Use the Hiragana script in discussion.</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Japanese Language</b> – Introduction of script, culture, History of script ,Speaking : Self introduction, listening : short video skit on self-introduction	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Introduction of Hiragana Script</b> - Writing : Hiragana script, Speak : Basic sentences, General vocabulary : Months , Days of the week ,Basic numbers, colours	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>Basic Sentence formation</b> -Basic sentence structure : Affirmative and Negative , Gen-eral vocabulary: about family	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Time and verbs</b> –Speaking : Talking about routine, Writing: routine using verbs and time, reading : A clock	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Introduction of Katakana and basic kanji</b> – Affirmative present ,past & future Read- ing : English words, country names Writing : Basic Kanji	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

Pre-Requisite: 1. NIL								
<b>Course Objectives (CO):</b>				<b>The objectives of Understanding Harmony are:</b> 1. To train the student for Development of a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence 2. To comprehend (or develop clarity) the harmony in the human being, family, society and nature/existence 3. To strengthen self-reflection. 4. To infuse a sense of commitment and courage to act 5. 5. To understand Holistic Understanding of Harmony on Professional Ethics.				
<b>Course Learning Outcomes (CLO):</b>				<b>Students would be able to:</b> 1. Analyze the most important requirement for any human being. 2. Apply correct appraisal of Physical needs, meaning of Prosperity in detail 3. Analyze salient values in relationship, Friends and Foes, Empathy, False Prestige. 4. Develop holistic perception of harmony at all levels of existence 5. Apply the Holistic Understanding of Harmony on Professional Ethics				

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Course Introduction - Need, Basic Guidelines, Content and Process for Value Education</b> 1. Purpose and motivation for the course, recapitulation from Universal Human Values-I 2. Self-Exploration-what is it? - Its content and process; Personality Traits-Self Excellence, Natural Acceptance and Experiential Validation- as the process for self-exploration, Adaptability, Belief and Understanding- Self discipline 3. Continuous Happiness and Prosperity- A look at basic Human Aspirations 4. Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority 5. Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario 6. Method to fulfil the above human aspirations: understanding and living in harmony at various levels.	<b>CLO 1</b>	<b>8</b>
<b>UNIT II</b>		

<b>Understanding Harmony in the Human Being - Harmony in Myself:</b> 1. Understanding human being as a co-existence of the sentient I and the material Body 2. Understanding the needs of Self (I) and Body - happiness and physical facility 3. Understanding the Body as an instrument of I (I being the doer, seer and enjoyer)- Habits and Hobbies, SWOT Analysis (Activity) 4. Understanding the characteristics and activities of I and harmony in I – Dalai Lamas Tibetan Personality Test – Dr. Menningers Psychometric Test. 5. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail	<b>CLO 2</b>	<b>5</b>
<b>UNIT III</b>		
<b>Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship</b> 1. Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship 2. Understanding the meaning of Trust; Difference between intention and competence 3. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship, Friends and Foes, Empathy, False Prestige.	<b>CLO 3</b>	<b>5</b>
<b>UNIT IV</b>		
<b>Understanding Harmony in the Nature and Existence - Whole existence as Coexistence:</b> 1. Understanding the harmony in the Nature and its Equanimity, Respect for all, Nature as Teacher 2. Interconnectedness and mutual fulfillment among the four orders of nature- recyclability and self-regulation in nature 3. Understanding Existence as Co-existence of mutually interacting units in all- pervasive space 4. Holistic perception of harmony at all levels of existence.	<b>CLO 4</b>	<b>5</b>
<b>UNIT V</b>		
<b>Implications of the above Holistic Understanding of Harmony on Professional Ethics</b> 1. Natural acceptance of human values 2. Definitiveness of Ethical Human Conduct 3. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order 4. Vision for the Holistic alternatives, UHVs for entrepreneurship	<b>CLO 5</b>	<b>7</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. Human Values and Professional Ethics by R R Gaur, R Sangal, G P Bagaria, Excel Books, New Delhi, 2010
2. Jeevan Vidya: Ek Parichaya, A Nagaraj, Jeevan Vidya Prakashan, Amarkantak, 1999
3. Human Values, A.N. Tripathi, New Age Intl. Publishers, New Delhi, 2004.

### Reference Books:

1. The Story of My Experiments with Truth - by Mohandas Karamchand Gandhi
2. Small is Beautiful - E. F Schumacher
3. Slow is Beautiful - Cecile Andrews
4. The Story of Stuff (Book).

### Online Resources/E-learning Resources:

3. <https://vemu.org/uploads/lecture-notes/22-12-2022-1850871704.pdf>

<b>Name of the Program:</b>		<b>B.TECH CSE</b>			<b>Semester: 3</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Constitution of India</b>			<b>Course Code/ Course Type</b>		<b>ACCOI201/AC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assessment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	
Pre-Requisite: 1. NIL								
<b>Course Objectives (CO):</b>			<b>The objectives of Constitution of India are:</b> 1. To familiarize the students with the key elements of the Indian constitution 2. To enable students to grasp the constitutional provisions and values 3. To acquaint the students with the powers and functions of various constitutional offices and institutions. 4. To make students understand the basic premises of Indian politics 5. To make students understand the role of constitution and citizen-oriented measures in a democracy					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Analyze the basic structure of Indian Constitution 2. Remember their Fundamental Rights, DPSP's and Fundamental Duties (FD's) of our constitution 3. know about our Union Government, political structure & codes, procedures 4. Elaborate our State Executive & Elections system of India 5. Access the Amendments and Emergency Provisions, other important provisions given by the constitution					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Indian Constitution</b> The Necessity of the Constitution, The Societies before and after the Constitution adoption. Introduction to the Indian constitution, The Making of the Constitution, The Role of the Constituent Assembly. The Preamble of Indian Constitution & Key concepts of the Preamble. Salient features of India Constitution	<b>CLO 1</b>	<b>8</b>
<b>UNIT II</b>		
<b>FR's, FD's and DPSP's</b> Fundamental Rights and its Restriction and limitations in different Complex Situations. Directive Principles of State Policy (DPSP) and its present relevance in our society with examples. Fundamental Duties and its Scope and significance in Nation building	<b>CLO 2</b>	<b>5</b>
<b>UNIT III</b>		
<b>Governance and Constitution</b> 1. Federalism in India - Features, Local Government -Panchayats -Powers and functions; 73rd and 74th amendments, Election Commission - Composition, Powers and Functions; Electoral Reforms, Citizen oriented measures - RTI and PIL - Provisions and significance	<b>CLO 3</b>	<b>5</b>

<b>UNIT IV</b>		
<b>Union Executive</b> Parliamentary System, Union Executive – President, Prime Minister, Union Cabinet, Parliament - LS and RS, Parliamentary Committees, Important Parliamentary Terminologies. Supreme Court of India, Judicial Reviews and Judicial Activism.	<b>CLO 4</b>	<b>5</b>
<b>UNIT V</b>		
<b>IState Executive &amp; Elections, Amendments and Emergency Provisions</b> State Executive, Election Commission, Elections & Electoral Process. Amendment to Constitution (How and Why) and Important Constitutional Amendments till today. Emergency Provisions	<b>CLO 5</b>	<b>7</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. “Constitution of India” (for Competitive Exams) - Published by Naidhruva Edutech Learning Solutions, Bengaluru. – 2022
2. “Engineering Ethics”, M.Govindarajan, S.Natarajan, V.S.Senthilkumar, Prentice –Hall, 2004

### Reference Books:

1. “SamvidhanaOdu” - for Students & Youths by Justice HN NagamohanDhas, Sahayana, kerekon
2. “Constitution of India, Professional Ethics and Human Rights” by Shubham Singles, Charles E. Haries, published by Cengage Learning India, Latest Edition – 2019.
3. “Introduction to the Constitution of India”, (Students Edition.) by Durga Das Basu (DD Basu) Prentice –Hall, 2008
4. “The Constitution of India” by Merunandan K B: published by Merugu Publication.

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 4</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Database Management System</b>			<b>Course Code/ Course Type</b>		<b>UBTCE210/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite: 1. Knowledge of C Programming and DSA								
<b>Course Objectives (CO):</b>			<b>The the objective of Database Management System are:</b> 1. Ability to design entity relationship and convert entity relationship diagrams into RDBMS and ability to identify the data models for relevant problems. 2. Apply normalization for the development of application software's 3. Develop understanding concepts of Relational Database design and query languages. 4. Demonstrate effective Query processing and Transaction Processing. 5. Summarize concurrency control protocols and recovery algorithms.					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. An ability to design ER Model for any application 2. To Decompose any Schema by applying normal forms 3. To construct SQL queries for any requirement 4. To Understand the Query Evaluation and Execution processes 5. To write Trigger, Cursor, PL/SQL Programs and to design object oriented, extended relational schemas					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction</b> Database System Applications, Database Systems versus File Systems, View of Data, Data Models, Database Languages, Database Users and Administrators, Transaction Management, Database System Structure, Application architectures, History of Database Systems. Entity-Relationship Model, Basic Concepts, Constraints, Keys, Design Issues, Entity-Relationship Diagram, Weak Entity Sets, Extended E-R Features, Design of an E-R Database Schema, Reduction of an E-R Schema to Tables.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Relational Model</b> Structure of Relational Databases, The Relational Algebra, Extended Relational-Algebra Operations, Modification of the Database, Views, The Tuple Relational Calculus, The Domain Relational Calculus. Relational-Database Design:, First Normal Form, Pitfalls in Relational-Database, Design, Functional Dependencies, Decomposition, BCNF, Third, Fourth and more Normal Forms, Overall Database Design Process.	<b>CLO 2</b>	<b>9</b>

UNIT III		
<b>Structured Query Language</b> Basic Structure, Set Operations, Aggregate Functions, Null Values, Nested Sub queries, Views, Integrity and Security, Domain Constraints, Referential Integrity, Assertions, Triggers, Security and Authorization, Authorization in SQL, Encryption and Authentication.	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Transaction Management</b> Transaction Concept, Transaction State, Implementation of Atomicity and Durability, Concurrent Execution, Serializability, Recoverability, Implementation of Isolation, Transaction Definition in SQL, Testing for Serializability.	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Concurrency Control</b> Lock-Based Protocols, Timestamp-Based Protocols, Validation-Based Protocols, Multiple Granularities, Multiversion Schemes, Deadlock Handling, Insert and Delete Operations Weak Levels of Consistency, Concurrency in Index Structures. Recovery System, issues & solutions.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

### Learning Resources:

#### Text Books:

1. Hector Garcia-Molina, Jeff Ullman, and Jennifer Widom, "Database Systems: The complete Book" Pearson Education, 2002.

#### Reference Books:

1. Silberschatz, H. Korth and S. Sudarshan, "Database System Concepts", 4th Edition, McGraw-Hill International, 2002.
2. R. Elmasri and Shamakant B. Navathe, "Fundamentals of Database Systems", 3rd Edition, AddisonWesley , 2000

<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
-	1	-	1	1	25	-	25	
Pre-Requisite:								
1. Basic knowledge of Programming in C								
<b>Course Objectives (CO):</b>			<b>The the objective of Database Management System Laboratory are:</b>					
			<ol style="list-style-type: none"> <li>1. Develop understanding concepts of Relational Database design and query languages</li> <li>2. Demonstrate effective Query processing and Transaction Processing.</li> <li>3. Apply normalization for the development of application software's</li> <li>4. Ability to design entity relationship and convert entity relationship diagrams into RDBMS and formulate SQL queries on the respect data</li> <li>5. Ability to identify the data models for relevant problems</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. An ability to design ER Model for any application</li> <li>2. To Decompose any Schema by applying normal forms</li> <li>3. To construct SQL queries for any requirement</li> <li>4. To Understand the Query Evaluation and Execution processes</li> <li>5. To write Trigger, Cursor, PL/SQL Programs and to design object oriented, extended relational schemas.</li> </ol>					

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Practical 1	1	Analyze the problem and come with the entities in it. Identify what Data has to be persisted in the databases.	CLO1	2
2	Practical 2	2	Installation of MySQL and practicing DDL	CLO1	2
3	Practical 3	3	Practice queries using ANY, ALL, IN, EXISTS, UNION, INTERSECT Union: The union operator returns all distinct rows selected by two or more queries.	CLO2	2
4	Practical 4	4	Practice Queries using Aggregate functions, Group By, Having Clause and Order Clause.	CLO2	4
5	Practical 5	5	1. Practice Queries using Aggregate functions, Group By, Having Clause and Order Clause.	CLO2	4
6	Practical 6	6	Implement Indexes: An index is an ordered list of the contents of a column, (or a group of columns) of a table.	CLO3	2
7	Practical 7	7	Implement Exception handling	CLO3	4

8	Practical 8	8	Implement Triggers & Cursors	CLO4	4
9	Practical 9	9	Implementing Operations on relations using PL / SQL.	CLO4	4
10	Practical 10	10	Mini Project/Task	CLO1-5	4

<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite: 1. Basic knowledge of Programming in C and C++								
<b>Course Objectives (CO):</b>			<b>The the objective of Java Programming are:</b> 1. To learn the fundamentals of the Java programming language 2. To learn object-oriented principles like abstraction, encapsulation, inheritance, and polymorphism and apply them in solving problems using java  3. To apply the concepts of exception handling, multithreading and collection classes using java 4. To develop software applications using JDBC connectivity. 5. To design the Graphical User Interface using applets and swing controls.					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. To grasp the fundamentals programming concepts of Java programming language 2. To apply object-oriented principles like abstraction, encapsulation, inheritance, polymorphism in solving problems using java 3. To perform exception handling, multithreading code using java 4. To develop software applications using JDBC connectivity 5. To design the Graphical User Interface using event handling					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Java Programming</b> Java Programming- History of Java, comments, Java Buzz words, Data types, Variables, Constants, Scope and Lifetime of variables, Operators, Type conversion and casting, Enumerated types, Control flow- block scope, conditional statements, loops, break and continue statements, arrays, simple java standalone programs, class, object, and its methods constructors, methods, static fields and methods, access control, this reference, overloading constructors, recursion, exploring string class, garbage collection.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Inheritance</b> Inheritance – Inheritance types, super keyword, preventing inheritance: final classes and methods. Polymorphism – method overloading and method overriding, abstract classes and methods. Interfaces- Interfaces Vs Abstract classes, defining an interface, implement interfaces, accessing implementations through interface references, extending interface, inner class. Packages- Defining, creating and accessing a package, importing packages.	<b>CLO 2</b>	<b>9</b>

UNIT III		
<b>Exception Handling and Multithreading</b> Exception handling-Benefits of exception handling, the classification of exceptions - exception hierarchy, checked exceptions and unchecked exceptions, usage of try, catch, throw, throws and finally, creating own exception subclasses. Multithreading – Differences between multiple processes and multiple threads, thread life cycle, creating threads, interrupting threads, thread priorities, synchronizing threads, inter-thread communication, producer consumer problem	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Database Management</b> Collection Framework in Java – Introduction to java collections, Overview of java collection framework, commonly used collection classes- Array List, Vector, Hash table, Stack, Lambda Expressions. Files- Streams- Byte streams, Character streams, Text input/output, Binary input/output, File management using File class. Connecting to Database – JDBC Type 1 to 4 drivers, connecting to a database, querying a database and processing the results, updating data with JDBC, Data Access Object (DAO)..	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Event Handling</b> GUI Programming with Swing - The AWT class hierarchy, Introduction to Swing, Swing Vs AWT, Hierarchy for Swing components, Overview of some Swing components – Jbutton, JLabel, JTextField, JTextArea, simple Swing applications, Layout management – Layout manager types – border, grid and flow Event Handling- Events, Event sources, Event classes, Event	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. “Java Fundamentals a Comprehensive Introduction” Herbert Schildt and Dale Skrien, TMH
2. “Head First Java: Your Brain on Java - A Learner’s Guide”, 1st Edition, by Bert Bates, Kathy Sierra

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Community Engineering:</b> Overview of course objectives, expectations, and project guidelines Introduction to community-based participatory research and design principles Case studies of successful community engineering projects	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Needs Assessment and Stakeholder Engagement:</b> Methods for conducting community needs assessments and asset mapping, Techniques for engaging diverse stakeholders in the design process, Ethical considerations in working with communities.	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>Project Planning and Design:</b> Project scoping, goal setting, and defining success criteria, Engineering design processes and methodologies, Incorporating sustainability principles into project design	<b>CLO 3</b>	<b>6</b>

UNIT IV		
<b>Implementation and Collaboration:</b> Project management techniques, including scheduling, budgeting, and resource allocation, Interdisciplinary collaboration and team dynamics, Effective communication with community partners and project stakeholders .	<b>CLO 4</b>	<b>6</b>
UNIT V		
<b>Project Execution and Monitoring:</b> Prototyping and testing of project solutions, Monitoring project progress and making adjustments as needed, Documentation and record-keeping for project evaluation <b>Impact Evaluation and Reflection:</b> Methods for assessing the social, economic, and environmental impact of community engineering projects, Reflective practices and peer feedbackn	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

### Assesment:

1. Project Proposal: Written proposal outlining the project scope, objectives, and methodology (20)
2. Project Implementation: Development and implementation of the digital solution, including documentation and code repository (30)
3. Final Report: Written report summarizing the project process, outcomes, and impact assessment (30)
4. Presentation: Oral presentation of project findings and demonstration of the digital

<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite: 1. Basic statistical concepts								
<b>Course Objectives (CO):</b>			<b>The the objective of Applied Statistical Techniques are:</b> 1. To familiarize the students with advanced techniques in Statistics 2. To acquire knowledge of techniques of advanced level of sampling & estimation 3. To apply tests of hypothetical techniques and its applications that would enhance analytical thinking power 4. To learn the where and how to apply parametric & non-parametric tests with applications 5. Compare parametric and non-parametric inference					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Identify the advanced terms in statistics 2. Explain the estimation & its techniques 3. Apply knowledge of hypothesis techniques to test large and small samples 4. Apply non-parametric tests on practical situations 5. Analyze parametric and non-parametric inference					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Sampling Techniques</b> Random sampling, Sampling from finite and infinite populations, with and without replacement, central limit theorem, Standard error of sampling, Sampling distribution of sample mean and proportion	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Estimation</b> Introduction, Types of estimation, Interval estimation, Point estimation: Maximum likelihood function, Method of moments, Criteria for good estimates: Unbiasedness, Consistency, Sufficiency by Neyman factorization theorem	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>Test of Hypothesis-II</b> Introduction, Hypothesis, Simple and composite hypothesis, Type I and Type II errors, Level of significance, Critical region, Student's-t test, Z-test	<b>CLO 3</b>	<b>9</b>
<b>UNIT IV</b>		
<b>Test of Hypothesis-II</b> Test of hypothesis for small & large sample by Chi-Square distribution, Student's-t distributions, F-distributions. Degree of freedom, Analysis of variance (ANOVA): one-way, two-way (without interactions), P-Value.	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		

<b>Nonparametric Inference</b> Non-parametric Inference, order statistics, Tolerance region, Sign test, Mann-Whitney test, Wilcoxon signed rank test, Spearman's rank correlation test, Chi-square test	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Erwin Kreyszig, Advanced Engineering Mathematics, 10th Edition, John Wiley & Sons, 2014.
2. Hugh Neill, Trigonometry: A complete Introduction, John Murray Learning, 2018.
3. George B. Thomas, Jr and Ross L. Finney, Calculus and Analytical Geometry, 9th Edition, 1998

### Reference Books:

1. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 44thEdition, 2010
2. Ron Larson, Trigonometry, Brooks/Cole, 9th Edition, 2013.
3. Robert E, Moyer, Trigonometry, Mc. Graw Hill, Addison-Wesely, 4th Edition, 2009.

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 4</b>		<b>Level: UG</b>

<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite: 1. Computer Networks and Security								
<b>Course Objectives (CO):</b>			<b>The the objective of Internet of Things are:</b> 1. To comprehend fundamentals of Internet of Things (IoT) 2. To learn advances in IOT 3. To learn methodologies for IoT application development 4. To learn the IoT protocols, cloud platforms and security issues in IoT 5. To learn real world application scenarios of IoT along with its societal and economic impact using case studies and real time examples					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Comprehend the fundamentals and need of IOT. 2. Apply IoT enabling technologies for developing IoT systems 3. Apply design methodology for designing and implementing IoT applications 4. Analyze IoT protocols for making IoT devices communication 5. Design cloud based IoT systems					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Internet of Things: Concepts</b> Introduction to Internet of Things (IoT): Definition, Characteristics of IoT, Vision, Trends in Adoption of IoT, IoT Devices, IoT Devices Vs Computers, Societal Benefits of IoT, Technical Building Blocks. <b>Physical Design of IoT:</b> Sensors and Actuators, Need of Analog / Digital Conversion. <b>Logical Design of IoT:</b> IoT functional blocks, Applications in IoT.	<b>CLO 1</b>	<b>10</b>
<b>UNIT II</b>		
<b>IoT: Design Methodology</b> IoT Design Methodology: Steps, Basics of IoT Networking, Internet Structure, Connectivity Technologies, IoT Communication Models, Four pillars of IoT: M2M, SCADA, WSN, RFID.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>IoT Protocols:</b> Sensor Networks, Protocol Standardization for IoT, M2M and WSN Protocols, RFID Protocol, Modbus Protocol, Zigbee Architecture. IP based Protocols: MQTT (Secure), 6LoWPAN, LoRa	<b>CLO 3</b>	<b>9</b>

<b>UNIT IV</b>		
<b>Cloud Platforms for IoT:</b> Software Defined Networking, Introduction to Cloud Storage Models, Communication API. WAMP: AutoBahn for IoT, Xively Cloud for IoT. Python Web Application, Amazon Web Services for IoT, SkyNet IoT Messaging Platform, RESTful Web Service, GRPC,SOAP.	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
<b>Security in IoT:</b> Introduction, Vulnerabilities of IoT, Security Requirements, Challenges for Secure IoT, Threat Modeling. Key elements of IoT Security: Identity establishment, Access control, Data and message security, Non-repudiation and availability, Security model for IoT, Challenges in designing IOT applications	<b>CLO 5</b>	<b>8</b>
<b>Total Hours</b>		<b>45</b>

### Practical Plan:

Practical Number	Practical Title	Week Number	Details	CLO	Hours
1	Practical1	1	Connection of an Arduino board with ESP8266 wifi module.	CLO1	2
2	Practical 2	2	IoT based control of an LED using Arduino.	CLO2	2
3	Practical 3	3	IoT based control of an LED using Arduino.	CLO2	2
4	Practical 4	4	IoT and cloud based data logger using LM35 and Arduino.	CLO3	2
5	Practical 5	4	IoT and cloud based data logger using LM35 and Arduino.	CLO3	2
6	Practical 6	6	IoT and cloud based data logger using LM35 and Arduino.	CLO3	2
7	Practical 7	7	IoT based home automation using Arduino.	CLO4	2
8	Practical 8	8	IoT based home automation using Arduino	CLO4	2
9	Practical 9	9	IoT based home automation using Arduino.	CLO4	2
10	Practical 10	10	IoT based street light control using Arduino.	CLO5	2

11	Practical 11	11	IoT based street light control using Arduino.	CLO5	2
12	Practical 12	12	IoT based street light control using Arduino	CLO5	2
13	Practical 13	13	IoT based DC motor speed control using Arduino.	CLO5	2
14	Practical 14	14	IoT based DC motor speed control using Arduino.	CLO5	2
15	Practical 15	15	IoT based DC motor speed control using Arduino.	CLO5	2

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 4</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Digital Image Processing</b>			<b>Course Code/ Course Type</b>		<b>UBTCEOE207/OE</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite: 1. Digital Signal Processing								
<b>Course Objectives (CO):</b>			<b>The the objective of Digital Image Processing are:</b> 1. To become familiar with digital image fundamentals 2. To get exposed to simple image enhancement techniques in Spatial and Frequency domain 3. To learn concepts of degradation function and restoration techniques 4. To study the image segmentation and representation techniques 5. To become familiar with image compression and recognition methods					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Learn the basics and fundamentals of digital image processing, such as Digitization, sampling, quantization, and 2D-transforms 2. Operate on images using the techniques of smoothing, sharpening and enhancement in spatial Domain 3. Learn the basics of compression digital image and their different types 4. Analyze the restoration concepts and filtering techniques 5. Explore the basics of segmentation & features extraction techniques					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Digital Image Processing</b> Introduction Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Sampling and Quantization, Representing Digital Images (Data structure), Some Basic Relations, Human visual system, Sampling & quantization, Representing digital images, Spatial & gray level resolution, Image file formats, Basic relationships between pixels, Distance Measures. Basic operations on images-image addition, subtraction, logical operations, scaling, translation, rotation. Image Histogram. Color fundamentals & models – RGB, HSI YIQ.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Image Enhancement in Spatial Domain</b> IoT Some Basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic/Logic Operations. Spatial domain enhancement: Point operations-Log transformation, Power-law transformation, Piecewise linear transformations, Histogram equalization. Filtering operations- Image smoothing, Image sharpening. Frequency domain enhancement: 2D DFT, Smoothing and Sharpening in frequency domain. Homomorphic filtering. Restoration: Noise models, Restoration using inverse filtering and Wiener filtering. Restoration: Noise models, Restoration using Inverse filtering and Wiener filtering	<b>CLO 2</b>	<b>9</b>

<b>UNIT III</b>		
<b>Image Compression</b> Types of redundancy, Fidelity criteria, Lossless compression – Run length coding, Huffman coding, Bitplane coding, Arithmetic coding. Introduction to DCT, Wavelet transform. Lossy compression – DCT based compression, Wavelet based compression. Image and Video Compression Standards – JPEG, MPEG	<b>CLO 3</b>	<b>9</b>
<b>UNIT IV</b>		
<b>Image Segmentation and Morphological Operations</b> Image Segmentation: Point Detections, Line detection, Edge Detection-First order derivative - Prewitt and Sobel. Second order derivative – LoG, DoG, Canny. Edge linking, Hough Transform, Thresholding - Global, Adaptive. Otsu’s Method. Region Growing, Region Splitting and Merging. Morphological Operations: Dilation, Erosion, Opening, Closing, Hit-or-Miss transform, Boundary Detection, Thinning, Thickening, Skeleton.	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
<b>Image Restoration and Description</b> Image Restoration, degradation model, Properties, Noise models ,Mean Filters , Order Statistics , Adaptive filters , Band reject Filters, Band pass Filters ,Notch Filters , Optimum Notch Filtering, Inverse Filtering, Wiener filtering. Representation, Chain codes, Polygonal approximation, Signatures. Boundary Descriptors, Shape numbers, Fourier Descriptors, Statistical moments. Regional Descriptors, Topological, Texture. Principal Components for Description	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Practical1 :	1	Conversion of 24 bit color image to 8 bit, 4 bit image.	CLO1	2
2	Practical 2:	2	Perform Morphological operations –Erosion, Dilation, Opening, Closing	CLO1	2
3	Practical 3:	3	Apply image negation and power-law correction operations on image.t	CLO1	2
4	Practical 4:	4, 5	Study of statistical properties- Mean, Standard deviation, Variance & histogram plotting.	CLO1	4
5	Practical 5:	6	Enhance image using histogram equalization and stretching.	CLO2	2
6	Practical 6:	7	To perform image filtering in spatial domain.	CLO2	2
7	Practical 7:	8	To perform image filtering in frequency domain	CLO4	2

8	Practical 8:	9	Perform image smoothing and sharpening operations	CLO2	2
9	Practical 9:	10	Detect image edges using Sobel, Prewitt and Roberts operator.	CLO4	2
10	Practical 10:	11	Compress image using DCT / Wavelet transform.	CLO3	2
11	Practical 11:	12, 13	Apply Global and adaptive thresholding to an image.	CLO4	4
12	Practical 12:	14, 15	Compress image using DCT / Wavelet transform.	CLO5	4

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 4</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Web Development Using Django</b>			<b>Course Code/ Course Type</b>		<b>MOOCCE401/MOOC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>25</b>	<b>-</b>	<b>25</b>	
Pre-Requisite:								
1. Basic knowledge of Python programming and HTML								
<b>Course Objectives (CO):</b>			<b>The the objective of Web Development Using Django are:</b>					
			<ol style="list-style-type: none"> <li>1. To introduce the fundamentals of web development using the Django framework</li> <li>2. To provide hands-on experience in building and managing web applications with Django</li> <li>3. To equip students with knowledge of database migrations and data modeling in Django</li> <li>4. To develop skills in creating dynamic, interactive, and responsive web applications</li> <li>5. To integrate front-end and back-end development within the Django framework</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Build and deploy web applications using the Django framework</li> <li>2. Design and manage databases with Django's ORM and migrations</li> <li>3. Implement user authentication and authorization in Django applications</li> <li>4. Integrate static files, templates, and front-end components into Django projects.</li> <li>5. Use Django to develop scalable and maintainable full-stack web applications</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Django Framework</b> Overview of Web Development and Django –(Introduction to the MVC (Model-View-Controller) Pattern,Installing Django and Setting Up the Environment),Creating a Django Project –(Django Project and App Structure,Django Settings and Configuration),URL Mapping and Views –(Defining URLs and Views,Dynamic URLs and Path Converters),Handling HTTP Requests and Responses-(Hands-on Exercise: Create a basic Django project with URL routing and simple views).	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Working with Models and Databases</b> Django ORM (Object-Relational Mapping) –(Defining Models and Fields,Querying and Managing Data with ORM),Database Migrations –(Creating and Applying Migrations,Handling Schema Changes),Relationships in Django Models –(One-to-Many and Many-to-Many Relationships,Using Foreign Keys), Integrating Databases –(Setting Up SQLite/PostgreSQL with Django Hands-on Exercise: Build and manage a database schema using Django ORM and migrations.).	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		

<b>Django Templates and Static Files</b> Introduction to Django Templates –(Using Template Tags and Filters,Template Inheritance), Working with Static Files –(Managing CSS, JavaScript, and Images in Django,Using the Static Files App),Dynamic Data in Templates –(Passing Context to Templates,Displaying Query Results in HTML),Form Handling in Django–(Creating and Processing Forms,Form Validation and Customization,Hands-on Exercise: Design a Django app with dynamic templates and static assets integration.).	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Advanced Django Features</b> User Authentication and Authorization–(User Model and Authentication Flow,Managing Permissions and Groups),Working with Django Admin–(Customizing the Django Admin Interface,Adding Custom Admin Actions),Middleware in Django –(Overview of Middleware and Its Role,Writing Custom Middleware),Building APIs with Django–(Introduction to Django REST Framework,Creating Basic RESTful APIs,Hands-on Exercise: Implement user authentication and build a REST API for a Django app.).	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Deployment and Capstone Project</b> Deploying Django Applications –(Preparing the Project for Deployment,Deploying on Platforms like Heroku or AWS),Scaling and Maintaining Django Projects –( Caching, Load Balancing, and Debugging,Logging and Monitoring Django Applications),Capstone Project–(Design and Develop a Full-Stack Web Application,Integrate Authentication, Database, and RESTful API,Deploy and Demonstrate the Completed Application).	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

<b>1</b>	<b>-</b>	<b>-</b>	<b>1</b>	<b>1</b>	<b>25</b>	<b>-</b>	<b>25</b>	

Pre-Requisite:

1. Basic understanding of Linux and networking concepts

<b>Course Objectives (CO):</b>	<p><b>The the objective of Foundations of Cyber security in Linux are:</b></p> <ol style="list-style-type: none"> <li>1. To introduce core concepts of cybersecurity and their application in Linux environments</li> <li>2. To provide hands-on experience in configuring and securing Linux systems</li> <li>3. To equip students with knowledge of system hardening, network security, and threat detection in Linux</li> <li>4. To integrate theoretical cybersecurity principles with practical Linux system administration</li> <li>5. To prepare students for entry-level roles in cybersecurity and Linux administration</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Understand key principles of cybersecurity, including confidentiality, integrity, and availability</li> <li>2. Implement user and file system security measures in Linux</li> <li>3. Configure and manage secure network connections in Linux environments</li> <li>4. Detect and respond to security incidents using Linux tools and logging mechanisms.</li> <li>5. Apply advanced system administration techniques to secure Linux servers</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Foundations of Cybersecurity</b> Introduction to Cybersecurity (Core Concepts: CIA Triad (Confidentiality, Integrity, Availability, Common Threats and Attacks (Phishing, Malware, Ransomware) , Understanding Security Policies (Risk Management and Compliance, Importance of Security Awareness), Fundamentals of Linux Security ( Linux Permissions and File Ownership, Best Practices for Linux Security), Case Studies in Cybersecurity(Hands-on Exercise: Implement file permissions and security configurations in a Linux environment).	<b>CLO 1</b>	<b>6</b>

<b>UNIT II</b>		
<b>Linux System Administration and Security Basics</b> (Based on Red Hat RH134 - Red Hat System Administration II) Managing Users and Groups (User Authentication and Password Policies, Configuring Sudo for Privileged Access), File System Security (Access Control Lists (ACLs), Encrypting File Systems with LUKS. Process Management and Security (Understanding Process Priorities, Managing Process Permissions. Service Hardening ( Disabling Unnecessary Services, Configuring System Logs for Security Audits) Hands-on Exercise: Harden a Linux system by securing user accounts and encrypting data.	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>Securing Network Connections in Linux</b> Introduction to Network Security (Understanding Firewalls and iptables/nftables, Basics of SELinux and AppArmor). Configuring Secure Network Services (SSH Security: Keys, Configurations, and Best Practices, Configuring Secure Web and FTP Services), Secure Remote Access (VPN Configuration Basics, Managing Certificates and OpenSSL), Troubleshooting Network Issues (Analyzing Network Traffic with Wireshark, Using tcpdump for Incident Analysis). Hands-on Exercise: Set up a secure SSH server and configure firewall rules.	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Advanced Linux Security and Incident Response</b> User Monitoring and Logging in Linux (Configuring rsyslog and journalctl, Setting Up Intrusion Detection Systems (IDS) ), Security Automation ( Using Bash Scripts for Security Monitoring , Introduction to Ansible for Security Automation. Incident Response in Linux (Analyzing Logs for Security Incidents, Isolating and Mitigating Threats), Forensics in Linux (Basics of Memory and Disk Forensics, Tools for Data Recovery and Analysis). Hands-on Exercise: Detect and analyze a simulated security incident in a Linux environment.	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Capstone Project and Integration</b> Comprehensive System Hardening ( Applying Learned Security Measures to a Linux System, Securing Web Servers, Databases, and Applications), Configuring Linux for Secure Networking (Implementing Best Practices for Network Security, Advanced Firewall Configurations). Capstone Project ( Design and Implement Secure Linux Environment, Document and Present Security Strategies and Configurations), Future Directions ( Preparing for Advanced Certifications (RHCE, CompTIA Security+), Emerging Trends in Linux Security and Cybersecurity. Capstone Project Presentation: Deploy a secure Linux server with end-to-end security measures.	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

### Text Books:

1. "Red Hat RH124: Red Hat System Administration I"
2. "Red Hat DO101: Introduction to OpenShift Applications".

### Reference Books:

1. "Practical Guide to Linux Commands, Editors, and Shell Programming" by Mark G. Sobell
2. "Linux Bible" by Christopher Negus
3. "Cybersecurity for Beginners" by Raef Meeuwisse

<b>Name of the Program:</b>		<b>B.TECH CSE</b>			<b>Semester: 4</b>		<b>Level: UG/PG</b>	
<b>Course Name:</b>		<b>German A1.2</b>			<b>Course Code/ Course Type</b>		<b>UFL 202 A/AEC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	
Pre-Requisite: 1. Can understand and use familiar, everyday expressions and very simple sentences aimed at satisfying specific needs								
<b>Course Objectives (CO):</b>			<b>The the objective of German A1.2 are:</b> 1. To get along with a basic vocab 2. To understand German day to day culture 3. Can communicate in routine situations 4. To be able to have a direct exchange of information about familiar matters 5. To describe own surroundings					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Communicate in the areas of immediate importance 2. Able to frame simple sentences in formal conversation 3. Translate simple sentences from English to the German language and vice-versa 4. Construct a dialogue, in the German language, for basic human interactions in a social context 5. Take part in an interaction relating to basic conversation					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Kontakte</b> planning of letter writing, ramification of Letter, writing and understanding, discussion about language learning, find information from texts, understand conversations on various topics, texts related to office life Grammar – Usage of Articles and Prepositions	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>MeineWohnung</b> Understand home advertisements, describe house, how to reply invitations, how to express ‘likes and dislikes’, speak about different forms of living, how to write a text on house Grammar – Adjectives	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>AllesArbeit?</b> Talk about daily routine, talk about past, understand job advertisements, understand blogs on jobs, express opinions about jobs, prepare telephonic dialogues, speak about jobs ,Grammar – Past tense, Sentence connectors	<b>CLO 3</b>	<b>6</b>

UNIT IV		
<b>Kleidung und Mode</b> Speak about cloths and shopping, lead a discussion during cloths shopping, discussion in departmental store, understand and research information about Berlin, Grammar – Separable and non-separable verbs	<b>CLO 4</b>	<b>6</b>
UNIT V		
<b>Gerund und munter &amp; Ab in den Urlaub</b> Learn body parts, Health related dialogue, City orientation, Travel reports, discussion regarding different travel destinations and weather Grammar – Imperative, Time adverbs	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

### Learning Resources:

#### Text Books:

1. Netzwerk A1, Ernst klettVerlag & Goyal Publishers & Distributors Pvt. Ltd.
2. Studio d A1, CornelesenVerlag & Goyal Publishers & Distributors Pvt. Ltd.
3. NetzwerkNeu A1, Ernst klettVerlag & Goyal Publishers & Distributors Pvt. Ltd

#### Reference Books:

1. Hallo Deutsch A1, ErnstKlettVerlag, Goyal Publishers & Distributors Pvt. Ltd
2. ThemenAktuell 1, Hueberverlag
3. Maximal Ernst klettVerlag & Goyal Publishers & Distributors Pvt. Ltd

<b>Name of the Program:</b>		<b>B.Tech</b>			<b>Semester: 4</b>		<b>Level: UG/PG</b>	
<b>Course Name:</b>		<b>Japanese language skill - L2</b>			<b>Course Code/ Course Type</b>		<b>UFL202B/AEC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assesment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	
Pre-Requisite: 1. Desire to get acquainted with the Japanese language. Basic knowledge of Hiragana and Katakana.								
<b>Course Objectives (CO):</b>			<b>The the objective of Japanese language skill - L2 are:</b> 1. To meet the needs of ever-growing industry, with respect to language support 2. To get introduced to Japanese society and culture through language 3. To promote multilingualism in exposing students to different cultures 4. Fostering respect for linguistic diversity 5. Learning additional language to develop a better memory, talent for problem solving, ability to concentrate					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Read & write words that have been borrowed from other language 2. Comprehend and speak basic conversation with basic particles 3. Speak and write about Routine 4. Basic sentence patterns incorporated into short dialogues indicating how they are used in actual conversation 5. Comprehend grammatical structure, and improve communication abilities					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Katakana Script</b> Katakana Script / Writing Kanji	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>System of demonstrative words</b> Minna no Nihongo lesson no. 1,2 & 3	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>Minna no Nihongo lesson no. 4T</b> (Write and Speak basic sentences in correct tenses)	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
Reading : Basic conversation using particles Listening : conversation related to particles Speaking : Sentences about give, lend, teach, receive	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Tenses</b> Writing : Affirmative present ,past & future Negative present ,past,& future sentences Writing : About Routine	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

<b>Name of the Program:</b>		<b>B.Tech/B.B.A/ B.C.A/B.Sc/ B.Pharm</b>			<b>Semester: 4</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>UHV-II: Understanding Harmony</b>			<b>Course Code/ Course Type</b>		<b>ACUHV201/AC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	
Pre-Requisite: 1. NIL								
<b>Course Objectives (CO):</b>			<b>The objectives of Understanding Harmony are:</b> 1. To train the student for Development of a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence 2. To comprehend (or develop clarity) the harmony in the human being, family, society and nature/existence 3. To strengthen self-reflection. 4. To infuse a sense of commitment and courage to act 5. 5. To understand Holistic Understanding of Harmony on Professional Ethics.					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Analyze the most important requirement for any human being. 2. Apply correct appraisal of Physical needs, meaning of Prosperity in detail  3. Analyze salient values in relationship, Friends and Foes, Empathy, False Prestige. 4. Develop holistic perception of harmony at all levels of existence 5. Apply the Holistic Understanding of Harmony on Professional Ethics					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Course Introduction - Need, Basic Guidelines, Content and Process for Value Education</b> 1. Purpose and motivation for the course, recapitulation from Universal Human Values-I 2. Self-Exploration-what is it? - Its content and process; Personality Traits-Self Excellence, Natural Acceptance and Experiential Validation- as the process for self-exploration, Adaptability, Belief and Understanding- Self discipline 3. Continuous Happiness and Prosperity- A look at basic Human Aspirations 4. Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority 5. Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario 6. Method to fulfil the above human aspirations: understanding and living in harmony at various levels.	<b>CLO 1</b>	<b>8</b>
<b>UNIT II</b>		

<b>Understanding Harmony in the Human Being - Harmony in Myself:</b> 1. Understanding human being as a co-existence of the sentient I and the material Body 2. Understanding the needs of Self (I) and Body - happiness and physical facility 3. Understanding the Body as an instrument of I (I being the doer, seer and enjoyer)- Habits and Hobbies, SWOT Analysis (Activity) 4. Understanding the characteristics and activities of I and harmony in I – Dalai Lamas Tibetan Personality Test – Dr. Menningers Psychometric Test. 5. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail	<b>CLO 2</b>	<b>5</b>
<b>UNIT III</b>		
<b>Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship</b> 1. Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship 2. Understanding the meaning of Trust; Difference between intention and competence 3. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship, Friends and Foes, Empathy, False Prestige.	<b>CLO 3</b>	<b>5</b>
<b>UNIT IV</b>		
<b>Understanding Harmony in the Nature and Existence - Whole existence as Coexistence:</b> 1. Understanding the harmony in the Nature and its Equanimity, Respect for all, Nature as Teacher 2. Interconnectedness and mutual fulfillment among the four orders of nature- recyclability and self-regulation in nature 3. Understanding Existence as Co-existence of mutually interacting units in all- pervasive space 4. Holistic perception of harmony at all levels of existence.	<b>CLO 4</b>	<b>5</b>
<b>UNIT V</b>		
<b>Implications of the above Holistic Understanding of Harmony on Professional Ethics</b> 1. Natural acceptance of human values 2. Definitiveness of Ethical Human Conduct 3. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order 4. Vision for the Holistic alternatives, UHVs for entrepreneurship	<b>CLO 5</b>	<b>7</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. Human Values and Professional Ethics by R R Gaur, R Sangal, G P Bagaria, Excel Books, New Delhi, 2010
2. Jeevan Vidya: Ek Parichaya, A Nagaraj, Jeevan Vidya Prakashan, Amarkantak, 1999
3. Human Values, A.N. Tripathi, New Age Intl. Publishers, New Delhi, 2004.

### Reference Books:

1. The Story of My Experiments with Truth - by Mohandas Karamchand Gandhi
2. Small is Beautiful - E. F Schumacher
3. Slow is Beautiful - Cecile Andrews
4. The Story of Stuff (Book).

<b>Name of the Program:</b>		<b>B.TECH CSE</b>			<b>Semester: 4</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Constitution of India</b>			<b>Course Code/ Course Type</b>		<b>ACCOI201/AC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Teaching Scheme</b>					<b>Assessment Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	
Pre-Requisite: 1. NIL								
<b>Course Objectives (CO):</b>			<b>The objectives of Constitution of India are:</b> 1. To familiarize the students with the key elements of the Indian constitution 2. To enable students to grasp the constitutional provisions and values 3. To acquaint the students with the powers and functions of various constitutional offices and institutions. 4. To make students understand the basic premises of Indian politics 5. To make students understand the role of constitution and citizen-oriented measures in a democracy					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Analyze the basic structure of Indian Constitution 2. Remember their Fundamental Rights, DPSP's and Fundamental Duties (FD's) of our constitution 3. know about our Union Government, political structure & codes, procedures 4. Elaborate our State Executive & Elections system of India 5. Access the Amendments and Emergency Provisions, other important provisions given by the constitution					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Indian Constitution</b> The Necessity of the Constitution, The Societies before and after the Constitution adoption. Introduction to the Indian constitution, The Making of the Constitution, The Role of the Constituent Assembly. The Preamble of Indian Constitution & Key concepts of the Preamble. Salient features of India Constitution	<b>CLO 1</b>	<b>8</b>
<b>UNIT II</b>		
<b>FR's, FD's and DPSP's</b> Fundamental Rights and its Restriction and limitations in different Complex Situations. Directive Principles of State Policy (DPSP) and its present relevance in our society with examples. Fundamental Duties and its Scope and significance in Nation building	<b>CLO 2</b>	<b>5</b>
<b>UNIT III</b>		
<b>Governance and Constitution</b> 1. Federalism in India - Features, Local Government -Panchayats -Powers and functions; 73rd and 74th amendments, Election Commission - Composition, Powers and Functions; Electoral Reforms, Citizen oriented measures - RTI and PIL - Provisions and significance	<b>CLO 3</b>	<b>5</b>

UNIT IV		
Union Executive Parliamentary System, Union Executive – President, Prime Minister, Union Cabinet, Parliament - LS and RS, Parliamentary Committees, Important Parliamentary Terminologies. Supreme Court of India, Judicial Reviews and Judicial Activism.	CLO 4	5
UNIT V		
IState Executive & Elections, Amendments and Emergency Provisions State Executive, Election Commission, Elections & Electoral Process. Amendment to Constitution (How and Why) and Important Constitutional Amendments till today. Emergency Provisions	CLO 5	7
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. “Constitution of India” (for Competitive Exams) - Published by Naidhruva Edutech Learning Solutions, Bengaluru. – 2022
2. “Engineering Ethics”, M.Govindarajan, S.Natarajan, V.S.Senthilkumar, Prentice –Hall, 2004

### Reference Books:

1. “SamvidhanaOdu” - for Students & Youths by Justice HN NagamohanDhas, Sahayana, kerekon
2. “Constitution of India, Professional Ethics and Human Rights” by Shubham Singles, Charles E. Haries, published by Cengage Learning India, Latest Edition – 2019.
3. “Introduction to the Constitution of India”, (Students Edition.) by Durga Das Basu (DD Basu) Prentice –Hall, 2008
4. “The Constitution of India” by Merunandan K B: published by Merugu Publication.

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 5</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Theory of Computation</b>			<b>Course Code/ Course Type</b>		<b>UBTCE301/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>1</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite: 1. Discrete Mathematics 2. Digital Electronics & Logic Design								
<b>Course Objectives (CO):</b>			<b>The objectives of Theory of Computation are:</b> 1. To give an overview of the theoretical foundations of computer science from the perspective of formal languages 2. To illustrate finite state machines to solve problems in computing 3. To familiarize Regular grammars, context free grammar 4. To propose computation solutions using Turing machines 5. To analyze the problem types					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Elaborate basic concepts of formal languages of finite automata techniques 2. Develop formal mathematical methods to prove properties of languages, grammars and automata 3. Able to construct context free grammar for various languages 4. Applying normal form techniques push down automata and Turing Machines for any language 5. Illustrate the decidability or undecidability of various problems					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>FORMAL LANGUAGE THEORY AND FINITE AUTOMATA:</b> Introduction, Basic concepts, Languages, Finite State Machine, Deterministic Finite Automata, Non-Deterministic Finite Automata, Equivalence of Deterministic and Nondeterministic Finite Automata, Minimization of Deterministic Finite Automata, Finite Automata with Epsilon Transitions, Eliminating Epsilon transitions, Introduction to Mealy and Moore Machine.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>REGULAR EXPRESSIONS:</b> Introduction, Identities of Regular Expressions, Conversion of Regular Expressions to Finite Automata, Arden's Theorem, Closure properties of regular languages, Regular Grammar with Finite Automata., Pumping Lemma for Regular Languages.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>CONTEXT FREE LANGUAGE AND GRAMMAR:</b> Context Free Language, Context Free Grammar - Derivation Trees, Sentential Forms, Leftmost and Rightmost derivations of Strings., Ambiguity in CFG's, Simplification of CFG, Chomsky Normal Form, Griebach Normal Form, Chomsky Hierarchy.	<b>CLO 3</b>	<b>9</b>

UNIT IV		
<b>PUSHDOWN AUTOMATA:</b> Definition, Model, Acceptance of CFL, Acceptance by Final State and Acceptance by Empty stack and its Equivalence, Equivalence of CFG and PDA. <b>TURING MACHINES (TM):</b> Formal definition and behavior, Languages of a TM, TM as accepters, and TM as a computer of integer functions, Types of TMs.	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>COMPUTABILITY AND COMPLEXITY THEORY:</b> Decidable and Un-decidable Problems, Undecidable Problems that are Recursively Enumerable, P Class and NP Class with examples, P vs NP Problems, NP-Complete NP-Hard Problems.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

### Learning Resources:

#### Text Books:

1. John E. Hopcroft, Rajeev Motwani, Jeffrey D. Ullman (2007), Introduction to Automata Theory Languages and Computation, 3rd edition, Pearson Education, India

<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite: 1. Fundamental of Computers								
<b>Course Objectives (CO):</b>			<b>The objectives of Computer Network are:</b> 1. To establish communication among the computing nodes in various net working architectures. 2. Configure the computing nodes with understanding of protocols and technologies 3. Use different communicating modes and standards for communication. 4. Use modern tools for network traffic analysis 5. To learn network programming					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Comprehend working and architecture of college/ organization network. 2. Design network application by using various concepts of layered architecture 3. Write program to analyze working of various protocols and packets 4. Compare TCP and UDP services 5. Demonstrate application layer protocols					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Data Communication:</b> Fundamentals of Data Communication, Type of Connections, Network Topologies, Types of Networks-LAN, WAN And MAN; Data and Signals, Periodic Analog Signals, Digital Signals, Transmission Impairment, Data Rate Limits, Performance; Introduction to Digital to Digital, Analog to Digital, Digital to Analog, Analog to Analog Conversions; Transmission Modes.	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Introduction to Computer Networks:</b> Introduction to OSI and TCP/IP Protocol Suite, Classification of Addressing Mechanisms, Guided Media: Twisted Pair Cable, Coaxial Cable and Fiber-Optic Cable, Unguided Media: Wireless, Radio Waves, Microwaves and Infrared; Introduction to Data Link Layer.	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>Network Layer and Routing Principles:</b> Network Layer Services, Packet Switching: Datagram and Virtual Circuit Approach, Network Layer Performance: Delay, Throughput, Packet Loss, Congestion Control; IPv4: Datagram Format; Routing Algorithms: Distance Vector, Link-state, Path Vector Routing.	<b>CLO 3</b>	<b>9</b>

UNIT IV		
<b>Transport Layer and its Services:</b> Overview of Transport Layer, Transport Layer services, User Datagram Protocol (UDP): User Datagram, UDP Services, UDP Applications; Transmission Control Protocol (TCP): TCP Services, Features, TCP Segment, TCP Connection, TCP Congestion Control.	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Application Layer Protocols:</b> Introduction to Application Layer, Client-Server Paradigm, Socket Interface, DHCP, FTP, TFTP, WWW & HTTP, Electronic Mail: SMTP, POP3, IMAP and MIME.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 5</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Computer Network Laboratory</b>			<b>Course Code/ Course Type</b>		<b>UBTCE303/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
-	1	-	1	2	25	-	25	
Pre-Requisite: 1. Fundamental of Computers								
<b>Course Objectives (CO):</b>			<b>The objectives of Computer Network Laboratory are:</b> 1. To establish communication among the computing nodes in various networking architectures. 2. Configure the computing nodes with understanding of protocols and technologies. 3. Use different communicating modes and standards for communication. 4. Use modern tools for network traffic analysis. 5. To learn network programming.					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Comprehend working and architecture of college/ organization network. 2. Design network application by using various concepts of layered architecture. 3. Write program to analyze working of various protocols and packets. 4. Demonstrate LAN and WAN protocol behavior using Modern Tools. 5. Justify the working of error control and error detection mechanism using a program.					

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Network Topologies Setup	1	Set up and test different network topologies (star, bus, ring, mesh) using simulation tools like Cisco Packet Tracer or NS2/NS3	CLO1	2
2	Exploring OSI and TCP/IP Layers	2	Use Wireshark to capture network traffic and analyze headers for different layers, IPv4 packets, identifying different fields in the packet structure	CLO2	2
3	IP Addressing and Subnetting	3	Design an IPv4 addressing scheme and implement subnetting in a small network using Cisco Packet Tracer	CLO2	2
4	Routing Algorithm Implementation	4	Configure static and dynamic routing (RIP, OSPF) in Cisco Packet Tracer	CLO3	2
5	Error Detection and correction	5	Write a program for error detection and correction for 7/8 bits ASCII codes using Hamming Codes or CRC	CLO3	2
6	UDP and TCP Communication	6	Implement a TCP client-server program to demonstrate connection establishment and data transfer	CLO4	2

7	TCP Congestion Control Analysis	7, 8	Write a program to simulate Go back N and Selective Repeat Modes of Sliding Window Protocol in Peer-to-Peer mode.	CLO4	4
8	Simulation of Protocol	9, 10	Set up a simple web server and client using Python Flask and analyze HTTP requests/responses	CLO5	4
9	File Transfer using FTP and TFTP	11, 12	Set up an FTP server and client, transfer files, and analyze the protocol behavior.	CLO5	4
10	Mini Project	13,14,15	Mini Project in a group of 3 to 4 students	1, 2, 3, 4, 5	6

<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	

Pre-Requisite:

1. Basic Programming, Discrete Mathematics, Data Structures

<b>Course Objectives (CO):</b>	<p><b>The objectives of Intelligent Systems are:</b></p> <ol style="list-style-type: none"> <li>1. Explain fundamentals, approaches, and applications of Artificial Intelligence.</li> <li>2. Apply search methods and problem-solving strategies in AI systems.</li> <li>3. Use knowledge representation and reasoning techniques for intelligent decision-making.</li> <li>4. Implement fuzzy logic concepts to handle uncertainty in intelligent systems.</li> <li>5. Apply genetic algorithms and evolutionary methods for solving optimization problems.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Describe the key concepts, approaches, and applications of Artificial Intelligence.</li> <li>2. Apply search algorithms and game strategies to solve AI-based problems.</li> <li>3. Represent knowledge using logical techniques and perform reasoning for inference.</li> <li>4. Design fuzzy logic-based systems to handle imprecision and uncertainty.</li> <li>5. Implement genetic algorithms for solving optimization and search problems in intelligent systems.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<p><b>Basics of Artificial Intelligence :</b> Introduction to Artificial Intelligence (Definition and Scope), History and Evolution of AI, <b>Intelligent Agents :</b> Types, Properties, and Environments</p> <p><b>Approaches to AI :</b> Symbolic Reasoning, Machine Learning, Evolutionary Computing</p> <p>Rationality, Autonomy, and Perception in AI, <b>Applications of AI :</b> NLP, Robotics, Game Playing, Expert Systems</p>	<b>CLO 1</b>	<b>8</b>
<b>UNIT II</b>		
<p><b>Problem Solving in Artificial Intelligence :</b> Problem Formulation and State Space Representation, <b>Uninformed Search Strategies :</b> Breadth-First, Depth-First, Uniform-Cost, Depth-Limited Search, <b>Informed Search Strategies :</b> Greedy Best-First Search, A* Algorithm, <b>Local Search Algorithms :</b> Hill Climbing, Simulated Annealing, <b>Constraint Satisfaction Problems (CSP):</b> Representation, Backtracking Search, <b>Game Playing :</b> Minimax Algorithm, Alpha-Beta Pruning</p>	<b>CLO 2</b>	<b>10</b>

UNIT III		
<b>Knowledge Representation and Reasoning :</b> Introduction to Knowledge Representation, Propositional Logic and First-Order Predicate Logic, <b>Knowledge Representation Techniques :</b> Semantic Networks, Frames, Production Rules, Ontologies, <b>Inference Mechanisms :</b> Forward Chaining, Backward Chaining, Resolution, <b>Reasoning under Uncertainty :</b> Probabilistic Reasoning, Bayesian Networks, Knowledge Engineering and Expert Systems	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Fuzzy Logic and Uncertainty Handling :</b> Introduction to Fuzzy Logic and Fuzzy Sets, Membership Functions and Linguistic Variables, Fuzzy Set Operations (Union, Intersection, Complement), Fuzzy Rules and Fuzzy Inference Systems, Defuzzification Techniques <b>Applications of Fuzzy Logic :</b> Control Systems, Decision Support Systems	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Genetic Algorithms and Evolutionary Computing :</b> Introduction to Genetic Algorithms and Evolutionary Computing, <b>Biological Inspiration :</b> Natural Selection, Crossover, Mutation, Fitness Evaluation, <b>Structure of Genetic Algorithms :</b> Representation of Solutions, Selection Methods, Genetic Operators, <b>Applications of Genetic Algorithms :</b> Optimization, Scheduling	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

Pre-Requisite:

1. Python Programming, Data Structures

<b>Course Objectives (CO):</b>	<p><b>The objectives of Intelligent Systems Laboratory are:</b></p> <ol style="list-style-type: none"> <li>1. Design and implement intelligent agents that interact with environments and make decisions based on multiple input conditions.</li> <li>2. Apply various search algorithms to solve structured problem-solving tasks using Python.</li> <li>3. To Develop reasoning systems using logical operators and rule-based knowledge representation techniques.</li> <li>4. Construct fuzzy logic-based systems to handle imprecise inputs and perform decision-making under uncertainty.</li> <li>5. Implement genetic algorithms for solving optimization problems with fitness evaluation and constraint handling.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Develop intelligent agents capable of selecting actions based on multiple environmental conditions.</li> <li>2. Implement and compare search algorithms like BFS and DFS to solve pathfinding and puzzle-solving problems.</li> <li>3. Create rule-based reasoning systems using logical expressions for decision-making scenarios.</li> <li>4. Design and simulate fuzzy logic systems to handle uncertainty and perform decision-making using fuzzy inference.</li> <li>5. Apply genetic algorithms to optimize functions with constraint handling and evaluate solutions based on fitness criteria.</li> </ol>

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Smart Home Agent	1	Write a Python program for a smart home agent that controls multiple devices (fan, light, heater) based on inputs like temperature, light intensity, and time of day. The agent should: Turn ON/OFF the fan based on temperature, Switch lights ON at night if light intensity is low, Turn heater ON if temperature drops below a certain level during winter hours (Include at least three sensor inputs and define action rules for combinations of these inputs)	CLO 1	2
2	Informed Search Strategies	2, 3	Implement A*, Greedy Best-First Search for pathfinding or game scenarios.	CLO 1	4

3	Constraint Satisfaction Problems	4	Design a backtracking-based solution to problems like Sudoku, Map Coloring, or N-Queens.	CLO 2	2
4	Symbolic Reasoning	5	Create a knowledge base and inference engine for medical or diagnostic applications.	CLO 2	2
5	Eligibility Reasoning	6	Create a Python program that checks eligibility for a government scheme using compound conditions: Age must be above 18, Income must be below a specified limit, Resident of certain predefined regions (use a list of regions), Education qualification must meet minimum criteria (e.g., high school or above), The system should use logical operators and output whether the person is eligible, not eligible, or conditionally eligible.	CLO 3	2
6	Rule-Based System	7	Build an intelligent agent to play Tic-Tac-Toe, Connect-4, or similar games.	CLO 3	2
7	Fuzzy Set Plotting	8	Implement a basic fuzzy inference system to decide fan speed (low, medium, high) based on temperature input.	CLO 4	2
8	Fan Speed Control	9, 10	Build a rule-based or ML-based chatbot using NLTK or spaCy.	CLO 4	4
9	GA Function Maximization	11	Write a Python program to use a genetic algorithm to maximize the function $f(x, y) = \sin(x) * \cos(y)$ where: $x$ and $y$ are integers ranging from 0 to 100 Include constraint: $x + y$ must be $\leq 120$ , Implement the following: Binary encoding of solutions, Fitness evaluation with constraint penalty handling, Selection, crossover, and mutation operations, Display the best solution and corresponding fitness value after each generation.	CLO 5	2
10	Mini Project	12, 13, 14, 15	Development of a Rule-Based and Fuzzy Logic Supported Smart Fan Control System	1, 2, 3, 4, 5	8

Pre-Requisite:

1. Computer Networks, Operating Systems, Basics of Web Technologies

<b>Course Objectives (CO):</b>	<p><b>The objectives of Cloud Computing and Architecture are:</b></p> <ol style="list-style-type: none"> <li>1. Understand the fundamental concepts, models, and characteristics of cloud computing and its adoption strategies.</li> <li>2. Explore the enabling technologies and basic security mechanisms essential for cloud environments.</li> <li>3. Analyze cloud infrastructure, management, and security mechanisms used in building cloud systems.</li> <li>4. Study cloud architecture patterns and their role in designing scalable, elastic, and reliable cloud solutions.</li> <li>5. Evaluate cloud service delivery models, pricing strategies, and service quality metrics for effective cloud implementation.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Describe the core concepts, delivery models, deployment types, and benefits of cloud computing.</li> <li>2. Explain the key enabling technologies and apply basic cloud security concepts in cloud environments.</li> <li>3. Demonstrate the use of various cloud mechanisms, including infrastructure, management, and security tools.</li> <li>4. Design cloud architecture solutions using appropriate architectural patterns for scalability and resilience.</li> <li>5. Assess cloud delivery approaches, pricing models, and service quality metrics to support informed decision-making.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Fundamentals of Cloud Computing :</b> Introduction to Cloud Computing Concepts, Case Study Background and Cloud Adoption Strategies, Understanding Cloud Computing: History, Definitions, Drivers, Benefits, Risks, Fundamental Concepts, Models, Cloud Characteristics, Delivery, and Deployment Models	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Cloud Enabling Technologies and Security Basics :</b> <b>Cloud-Enabling Technologies :</b> Virtualization, Networking, Web Technologies, Multitenancy <b>Fundamental Cloud Security Concepts :</b> Threats, Vulnerabilities, Security Mechanisms, Risk Management	<b>CLO 2</b>	<b>9</b>

UNIT III		
<b>Cloud Computing Mechanisms :</b> <b>Cloud Infrastructure Mechanisms :</b> Virtual Servers, Storage, Monitoring, Resource Replication <b>Specialized Mechanisms :</b> Scaling, Load Balancing, Failover, Hypervisors, Clusters <b>Cloud Management Mechanisms :</b> Remote Administration, SLA Management, Billing Systems <b>Cloud Security Mechanisms :</b> Encryption, Hashing, Digital Signatures, IAM, SSO	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Cloud Architecture Design :</b> <b>Fundamental Cloud Architectures :</b> Load Balancing, Scalability, Resource Pooling, Cloud Bursting <b>Advanced Cloud Architectures :</b> Clustering, Load Balanced Virtual Servers, Zero Downtime, Failure Detection <b>Specialized Cloud Architectures :</b> Direct Access, Data Tiering, Virtual Switches, Storage Maintenance	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Working with Clouds – Cost, Quality, and Delivery :</b> Cloud Delivery Model Considerations (Provider and Consumer Perspectives), Cost Metrics and Pricing Models for Cloud Services, Service Quality Metrics, SLAs, and Performance Monitoring	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

Pre-Requisite:

1. Computer Networks, Operating Systems, Basics of Web Technologies

<b>Course Objectives (CO):</b>	<p><b>The objectives of Cloud Computing and Architecture Laboratory are:</b></p> <ol style="list-style-type: none"> <li>1. Understand the fundamental principles of cloud computing, scaling, and elasticity.</li> <li>2. Apply enabling technologies like virtualization and security mechanisms in cloud environments.</li> <li>3. Implement cloud infrastructure mechanisms such as load balancing and monitoring.</li> <li>4. Design and develop basic cloud architecture solutions for failover, redundancy, and scalability.</li> <li>5. Evaluate service quality through SLA monitoring and deploy containerized cloud solutions.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Simulate cloud scaling and elasticity concepts using Python-based solutions.</li> <li>2. Demonstrate virtualization and data security techniques through Python implementations.</li> <li>3. Apply resource monitoring and load balancing techniques in simulated cloud environments.</li> <li>4. Design failover and data redundancy mechanisms using Python scripts.</li> <li>5. Deploy scalable containers and perform SLA-based service quality evaluation.</li> </ol>

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Scaling Simulation	1	Write a Python script to simulate resource scaling scenarios (horizontal vs. vertical scaling) using simple process/thread creation and control.	CLO 1	2
2	Elasticity Demonstration	2	Develop a Python program to demonstrate the concept of elasticity by simulating workload increase and resource addition.	CLO 1	2
3	VM Management	3	Implement Virtual Machine (VM) creation and management using libvirt and Python bindings, or simulate virtual machine scheduling.	CLO 2	2

4	EC2 Instance	4	Launch different EC2 Instance and connect to remote machine using AWS console platform.	CLO 2	2
5	Data Encryption	5	Create a Python script to encrypt and decrypt text data using symmetric (AES) and asymmetric (RSA) encryption techniques.	CLO 2	2
6	Load Balancing	6	Write a Python program to simulate load balancing using round-robin or least-connection algorithm across multiple service instances.	CLO 3	2
7	Resource Monitoring	7	Develop a resource monitoring script in Python using psutil to monitor CPU, memory, and disk usage, simulating a cloud monitoring mechanism.	CLO 3	2
8	S3 Buckets	8	Create Buckets on AWS and explore versioning option on AWS console.	CLO 3	2
9	Load Balancer	9, 10	Create application Load Balancer and Launch website on Cloud	CLO 3	4
10	Failover Mechanism	11	Implement a Python-based failover mechanism simulation where service requests are switched between primary and backup instances.	CLO 4	2
11	Data Replication	12	Create a Python-based service that replicates a data file across multiple simulated storage nodes, demonstrating data redundancy.	CLO 4	2
12	Container Deployment	13	Use Python and docker-py or subprocess module to deploy multiple container instances and demonstrate scalability.	CLO 5	2
13	SLA Monitoring	14,15	Develop a Python script to simulate SLA monitoring by measuring response time of service endpoints and checking against defined thresholds.	CLO 5	4

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>INTRODUCTION TO WEB TECHNOLOGIES HTML:</b> Getting started with HTML, Why HTML, Tags and Elements, Attributes, Properties, Headings list, Links, Tables, Images, HTML Form, Media (Audio, Video), Semantic HTML5 Elements. <b>CSS:</b> Why CSS, Types of CSS, How to use CSS, Properties, Classes, Child-Class (Nested CSS), Colors, Text, Background, Border, Margin, Padding, Positioning (flex, grid, inline, block), Animation, Transition.	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>WEB SCRIPTING LANGUAGES:</b> JavaScript: Introduction to Scripting languages, Introduction to JavaScript (JS), JS Variables and Constants, JS Variable Scopes, JS Data Types, JS Functions, JS Array, JS Object, JS Events. Advanced JavaScript: JSON - JSON Create, Key-Value Pair, JSON Access, JSON Array, JS Arrow Functions, JS Callback Functions, JS Promises, JS Async-Await Functions, JS Error Handling. <b>AJAX:</b> Why AJAX, Call HTTP Methods Using AJAX, Data Sending, Data Receiving, AJAX Error Handling. <b>JQUERY:</b> Why JQuery, How to Use, DOM Manipulation with JQuery, Dynamic Content Change with JQuery, UI Design Using JQuery.	<b>CLO 2</b>	<b>6</b>

UNIT III		
<b>FRONT END TECHNOLOGIES:</b> Front-End Frameworks: What is web framework? Why Web Framework? Web Framework Types. MVC: What is MVC, MVC Architecture, MVC in Practical, MVC in Web Frameworks. ReactJS: Introduction to ReactJS, React Components, Inter Components Communication, Components Styling, Routing, Redux-Architecture, Hooks- Basic hooks, useState() hook, useEffect() hook, useContext() hook.	<b>CLO 3</b>	<b>6</b>
UNIT IV		
<b>BACK-END WITH DATABASE:</b> MongoDB: NoSQL and MongoDB Basics, MongoDB-Node.JS Communication, CRUD Operations using Node.JS, Mongoose ODM for Middleware, Advanced MongoDB, Big database Connectivity.	<b>CLO 4</b>	<b>6</b>
UNIT V		
<b>BACK-END TECHNOLOGIES:</b> Node.JS: Introduction to Node.JS, Environment Setup, Node.JS Events, Node.JS Functions, Node.JS Built-in UNITS, File System, NPM, Install External UNITS, Handling Data I/O in Node.JS, Create HTTP Server, Create Socket Server, Microservices- PM2. ExpressJS: Introduction to ExpressJS, Configure Routes, Template Engines, ExpressJS as Middleware, Serving Static Files, REST HTTP Method APIs, Applying Basic HTTP Authentication, Implement Session Authentication	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

Pre-Requisite:								
1. Proficiency in a programming language, such as Python or Java								
<b>Course Objectives (CO):</b>			<b>The objectives of Advanced Web Programming Laboratory are:</b>					
			<ol style="list-style-type: none"> <li>1. Apply the concepts of web design using HTML, CSS, Bootstrap, and JavaScript to create responsive web applications.</li> <li>2. Demonstrate version control, containerization, and frontend development using GitHub, Docker, and Angular framework.</li> <li>3. Develop server-side applications and RESTful APIs using Node.js, ExpressJS, and MongoDB.</li> <li>4. Utilize AWS services for deploying and hosting scalable web applications.</li> <li>5. Implement asynchronous data communication between client and server using AJAX POST method for dynamic web applications.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Design and implement a responsive dashboard with user registration and data handling using AJAX POST.</li> <li>2. Configure GitHub repository, set up Docker container, and develop user registration and profile management in Angular.</li> <li>3. Build a static website and implement CRUD APIs for assignment data management using Node.js and MongoDB.</li> <li>4. Create and host a mobile-friendly web application on AWS VPC or Elastic Beanstalk.</li> <li>5. Create responsive web interfaces with data collection, storage, and listing using AJAX POST and local storage.</li> </ol>					

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Working with HTML CSS	1, 2, 3	Create a responsive web page which shows the ecommerce/college/exam admin dashboard with sidebar and statistics in cards using HTML, CSS and Bootstrap. b. Write a JavaScript Program to get the user registration data and push to array/local storage with AJAX POST method and data list in new page	CLO1	6

2	Working with GitHub, NVIDEIA Docker	4, 5, 6	Create version control account on GitHub and using Git commands to create repository and push your code to GitHub. b. Create Docker Container Environment (NVIDEIA Docker or any other). c. Create an Angular application which will do following actions: Register User, Login User, Show User Data on Profile Component.	CLO 2	6
3	Working with Node.JS, ExpressJS	7, 8, 9	Create: a. Node.JS Application which serves a static website. b. Create four API using Node.JS, ExpressJS and MongoDB for CRUD Operations on assignment	CLO 3	6
4	Working with AWS VPC or AWS Elastic	10, 11, 12	Create a simple Mobile Website using jQuery Mobile. b. Deploy/Host Your web application on AWS VPC or AWS Elastic Beanstalk. Mini Project.	CLO 4	2
5	Working With AJAX POST	13, 14, 15	Create a responsive web page which shows the ecommerce/college/exam admin dashboard with sidebar and statistics in cards using HTML, CSS and Bootstrap. b. Write a JavaScript Program to get the user registration data and push to array/local storage with AJAX POST method and data list in new page.	CLO 5	6

<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>25</b>	<b>25</b>	<b>-</b>	
Pre-Requisite:								
1. Basic understanding of project management and familiarity with IT systems								
<b>Course Objectives (CO):</b>			<b>The objectives of Agile Project Management with Jira are:</b>					
			<ol style="list-style-type: none"> <li>1. To introduce Agile methodologies and their application in modern project management.</li> <li>2. To develop expertise in leveraging Atlassian Jira for effective project tracking and management.</li> <li>3. To integrate Agile principles with technical system administration concepts for streamlined project delivery.</li> <li>4. To provide hands-on experience in setting up and managing Agile workflows using Jira.</li> <li>5. To prepare students for roles in Agile project management and IT operations.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Understand Agile principles, frameworks, and practices.</li> <li>2. Implement Agile workflows and tools using Atlassian Jira</li> <li>3. Apply Agile methodologies in system administration and IT projects</li> <li>4. Analyze and resolve project bottlenecks using Agile techniques</li> <li>5. Design and manage end-to-end Agile projects in an IT environment</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Fundamentals of Agile Project Management</b> Introduction to Agile –(Principles and Manifesto,Benefits of Agile Over Traditional Methodologies),Agile Frameworks –(Scrum, Kanban, and SAFe,Roles in Agile Teams),Agile Planning and Iterations –(Sprints, User Stories, and Backlogs,Estimation and Velocity),Agile Metrics and Success Indicators-(Hands-on Exercise: Create a sample backlog and sprint plan).	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Working with Models and Databases</b> Introduction to Jira –(Setting Up Jira for Agile Projects,Understanding Boards, Backlogs, and Workflows),Managing Agile Projects in Jira –(Creating Epics, Stories, and Tasks,Configuring and Managing Sprint Boards),Advanced Jira Features-(Automations and Custom Workflows,Generating Agile Reports and Dashboards),Collaboration and Issue Tracking-(Linking Issues and Managing Dependencies,Using Jira for Team Collaboration,Hands-on Exercise: Configure a Jira project with custom workflows and dashboards).	<b>CLO 2</b>	<b>6</b>

<b>UNIT III</b>		
<b>Agile Practices in System Administration</b> Applying Agile in IT Operations-(Aligning System Administration with Agile Principles,Continuous Integration and Delivery (CI/CD) Practices),Configuring System Automation-(Using Ansible for IT Automation,Managing Configurations in Agile Projects),Monitoring and Logging for Agile Project-(Setting Up Monitoring Systems,Using Logs for Agile Metrics),Managing Dependencies in IT Projects -(Resolving Technical Bottlenecks with Agile Practices, Hands-on Exercise: Automate a system administration task using Ansible within an Agile framework.).	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Advanced Agile Techniques and Integration</b> Scaling Agile for Large Teams-(Applying SAFe and LeSS Frameworks,Managing Multiple Agile Teams with Jira),Agile Risk and Change Management-(Identifying and Mitigating Risks in Agile Projects,Handling Change Requests in Agile Environments),Agile in DevOps and IT Projects-(Integrating DevOps Practices with Agile,Agile Workflows for System Administration Projects),Jira Integrations and Plugins-(Integrating Jira with Confluence and Bitbucket,Using Plugins to Enhance Jira Functionality,Hands-on Exercise: Manage a large-scale Agile project using Jira with integrated tools.).	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Capstone Project and Future Directions</b> Designing an End-to-End Agile Workflow-(Setting Up a Complete Agile Project in Jira,Incorporating IT Operations and DevOps Practices) ,Agile Project Presentation-(Reporting Progress Using Jira Dashboards,Presenting Agile Metrics and Success Indicators),Challenges in Agile Implementation -(Overcoming Resistance to Agile Practices, Adapting Agile for Non-Traditional Teams),Future Trends in Agile and Jira-(Agile Beyond IT: Marketing, HR, and More,Evolving Features in Jira for Next-Gen Project Management,Capstone Project Presentation: Demonstrate a fully configured Jira project with Agile workflows for IT operations.).	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. "Agile Project Management with Jira" by David Harned
2. "Red Hat System Administration III"

### Reference Books:

1. "Essential Scrum: A Practical Guide to the Most Popular Agile Process" by Kenneth S. Rubin.
2. "Agile Estimating and Planning" by Mike Cohn
3. "Jira 8 Essentials" by Patrick Li
4. "DevOps Handbook: How to Create World-Class Agility, Reliability, and Security" by Gene Kim, Patrick Debois and John Willis.

### Online Resources/E-learning Resources:

<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>25</b>	<b>-</b>	<b>25</b>	

Pre-Requisite:

1. Basic programming knowledge and familiarity with distributed systems concepts

<b>Course Objectives (CO):</b>	<p><b>The objectives of Foundations of Blockchain and Java EE are:</b></p> <ol style="list-style-type: none"> <li>1. To provide foundational knowledge of blockchain technology, its architecture, and applications.</li> <li>2. To equip students with the skills to develop enterprise-grade applications using Java EE.</li> <li>3. To understand the interplay between blockchain technologies and Java EE in building robust, secure, and scalable applications.</li> <li>4. To enhance practical skills in implementing blockchain concepts and Java EE-based solutions.</li> <li>5. To prepare students for roles in blockchain development and enterprise application programming.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Understand the principles and architecture of blockchain technology.</li> <li>2. Analyze blockchain use cases and implement basic blockchain solutions.</li> <li>3. Develop Java EE applications using enterprise-grade programming techniques.</li> <li>4. Integrate blockchain functionalities into Java EE-based applications.</li> <li>5. Design, implement, and deploy secure and scalable enterprise applications leveraging blockchain.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Blockchain Technology</b> Fundamentals of Blockchain (Overview of Blockchain Technology; Distributed Ledgers, Consensus Mechanisms, and Cryptography), Blockchain Architecture (Blocks, Transactions, and Smart Contracts, Public vs. Private Blockchains)Blockchain Use Cases (Cryptocurrency, Supply Chain, and Decentralized Applications) Introduction to Smart Contracts (Basics of Solidity Programming).Hands-on Exercise: Explore a public blockchain and analyze transaction records.	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Developing Blockchain Applications</b> (Based on "Blockchain Basics") Setting Up a Blockchain Environment (Installing and Configuring Development Tools, Creating a Private Blockchain Network). Writing and Deploying Smart Contracts ,( Smart Contract Lifecycle and Deployment, Writing Basic Smart Contracts with Solidity). Integrating Blockchain with Applications ( Connecting Web Interfaces with Blockchain; Using APIs to Interact with Blockchain Networks) . Advanced Blockchain Concepts (Sidechains, Oracles, and Layer-2 Solutions). Hands-on Exercise: Write and deploy a smart contract for a simple decentralized application.	<b>CLO 2</b>	<b>6</b>

<b>UNIT III</b>		
<b>Java EE Fundamentals</b> (Based on Red Hat AD183 - Java EE 7.0) Introduction to Java EE ( Overview of Enterprise Java Applications, Java EE Architecture and Components). Developing Web Applications (Servlets, JSP, and WebSocket API; Handling HTTP Requests and Responses) Enterprise JavaBeans (EJB) ( Stateless, Stateful, and Singleton Beans; Dependency Injection in Java EE). Security in Java EE Applications ( Authentication, Authorization, and Encryption). Hands-on Exercise: Create a basic Java EE web application with servlets and JSP.	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Advanced Java EE and Blockchain Integration.</b> Java EE Persistence API ( Introduction to JPA and ORM Concepts; Managing Databases with Java EE). Java EE Messaging and Transactions (JMS and Message-Driven Beans; Distributed Transactions and Two-Phase Commit) Integrating Blockchain into Java EE Applications (Using Blockchain APIs in Java EE; Designing Hybrid Applications with Java EE and Blockchain. Building Scalable Applications (Microservices Architecture with Java EE; Using Kubernetes and Docker for Deployment)Hands-on Exercise: Build a Java EE application that integrates blockchain functionalities.	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Deployment and Capstone Project</b> Deploying Blockchain and Java EE Applications (Deployment Strategies for Blockchain Solutions; Deploying Java EE Applications on Red Hat JBoss)Debugging and Optimizing Applications ( Performance Tuning for Java EE; Monitoring Blockchain Transactions) Capstone Project ( Design and Develop a Java EE Application with Blockchain Integration; Present the Architecture, Implementation, and Deployment Strategy) . Future Directions in Blockchain and Java EE ( Emerging Trends and Career Opportunities; Preparing for Certifications (e.g., Red Hat Certified Application Developer). Capstone Project Presentation: Demonstrate a full-stack blockchain-integrated enterprise application.	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. "Blockchain Basics: A Non-Technical Introduction in 25 Steps" by Daniel Drescher
2. "Enterprise JavaBeans 3.2" by Andrew Lee Rubinger and Aslak Knutsen

### Reference Books:

1. "Mastering Blockchain" by Imran Bashir
2. "Java EE 7: The Big Picture" by Dr. Danny Coward
3. "Building Blockchain Projects" by Narayan Prusty
4. "Red Hat Application Development I (AD183)" (Official Course Material)
5. "Beginning EJB in Java EE 8" by Jonathan Wetherbee

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 6</b>		<b>Level: UG</b>

<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite: 1. Software Engineering								
<b>Course Objectives (CO):</b>				<b>The objectives of Software Testing and Quality Assurance are:</b> <ol style="list-style-type: none"> <li>1. Grasp the essentials of software testing, quality assurance, and the differences between faults, errors, and failures</li> <li>2. Learn various testing strategies and techniques, including black box, white box, and grey box testing</li> <li>3. Develop proficiency in applying different levels of testing, such as unit, integration, system, and acceptance testing</li> <li>4. Master test planning, management, execution, reporting, and the importance of automated testing tools</li> <li>5. Understand software quality assurance principles, practices, standards, metrics, and formal approaches</li> </ol>				
<b>Course Learning Outcomes (CLO):</b>				<b>Students would be able to:</b> <ol style="list-style-type: none"> <li>1. Identify the history, principles, goals of software testing, and distinguish between testing and debugging</li> <li>2. Apply various testing techniques to design and execute test cases, understanding their strengths and weaknesses</li> <li>3. Implement different testing levels and specific methods like boundary value analysis and equivalence partitioning</li> <li>4. Develop comprehensive test plans, execute manual and automated tests, manage and report test activities effectively</li> <li>5. Apply quality assurance principles, statistical methods, and standards like ISO 9000 to ensure and enhance software quality</li> </ol>				

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Software Testing:</b> Introduction, Evolution of Software testing, Basics of Software Testing – faults, errors and failures, Developers vs Test Engineers, testing objectives Principles of testing, Testing and debugging, testing metrics and measurements, Verification and Validation, Testing Life Cycle, SDLC vs STLC	<b>CLO 1</b>	<b>9</b>

UNIT II		
<b>Software Testing Strategies and Techniques:</b> Types of Testing Techniques- Introduction to Black Box, White Box, Grey Box. Classification of Testing- Functional testing, non-Functional testing, Maintenance testing. White Box Testing- Direct Inspections, Walkthroughs, Technical Reviews, Functional Testing, Basis path testing, Control Structure Testing, Code Coverage Testing, Code Complexity Testing. Black Box Testing- Requirement Based Testing, Boundary Value Analysis, Equivalence Partitioning. Differences between BBT and WBT	<b>CLO 2</b>	<b>9</b>
UNIT III		
<b>Levels of Testing:</b> A Strategic Approach to Software Testing, Test strategies for conventional Software- Unit Testing, Integration Testing, Incremental Testing: Top-Down, Bottom-Up Integration, Bi-Directional, Non-incremental Integration. Testing on Web Application: Performance Testing, Load/Stress Testing, Security Testing, Client-Server Testing, Scalability, Stability testing. Acceptance Testing: Alpha Testing and Beta Testing, Usability and accessibility testing, Configuration, compatibility testing, Special Tests: Regression Testing, GUI Testing.	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Test Planning:</b> Preparing a Test Plan, test Approach, criteria for Testing, Test Deliverables, Test Case Specification. Test Reporting- Executing Test Cases, Preparing Test Summary Report. Manual Testing vs Automated Testing Tools. Metrics and Measurement: Types of Metrics, Product Metrics and Process Metrics, Object oriented metrics in testing. Agile Testing: Agile Testing, Difference between Traditional and Agile testing, Agile principles and values, Agile Testing Quadrants, Automated Tests.	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Quality Assurance:</b> Software Quality and Software Quality Assurance. Elements of SQA, SQA Tasks, Goals, and Metrics. Statistical Software Quality Assurance, Six Sigma for Software engineering, ISO 9000 Quality Standards. Quality Metrics: Product and In-Process Metrics, Tools for Quality Management: Ishikawa's 7 Basic Tools, Checklists, Pareto Diagrams	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Naresh Chauhan "Software Testing Principles and Practices", Oxford University Press, 2010

-	1	-	1	2	25	-	25	

Pre-Requisite:

1. Knowledge of Java Programming

<b>Course Objectives (CO):</b>	<p><b>The objectives of Software Testing and Quality Assurance Laboratory are:</b></p> <ol style="list-style-type: none"> <li>1. Design and execute various test cases manually and using automation tools.</li> <li>2. Effectively identify, document, track, and manage defects using industry tools</li> <li>3. Create and maintain automated test scripts, understanding automation's pros and cons</li> <li>4. Plan, organize, and execute testing activities ensuring coverage and traceability.</li> <li>5. Evaluate testing tools and select appropriate ones for different scenarios</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Understand the objectives, scope, and significance of software testing and QA.</li> <li>2. Gain a comprehensive understanding of different testing techniques and their applications.</li> <li>3. Become familiar with the defect life cycle and the steps involved in defect management.</li> <li>4. Learn the principles of test automation, including script development, execution, and maintenance</li> <li>5. Understand quality assurance processes, including planning, design, execution, and reporting</li> </ol>

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Objective and Scope	1	Understand the objectives, scope, and significance of software testing and quality assurance. Familiarize with the lab environment, tools, and resources.	CLO1	2
2	Black Box Testing	2	Write and execute black box functional test cases manually for the given application, focusing on validating its functionality against the specified requirements.	CLO 2	2
3	Unit Test	3	Develop and execute unit tests for a specified module or function using a testing framework such as JUnit or pytest. Emphasize verifying the correctness of individual code units.	CLO 2	2

4	Integration Testing	4	Design and conduct integration testing for a system comprising multiple modules or components. Identify and address interface defects and inconsistencies to ensure seamless interaction between integrated units.	CLO 2	2
5	Bug Report	5	Prepare a comprehensive defect tracking report or bug report using MS-Excel or a defect tracking tool like Jira or BugZilla. Track and manage identified defects systematically.	CLO 3	2
6	Feature of Selenium	6	Study and explore the functionalities and features of Selenium, an open-source automated testing tool for web applications. Understand its capabilities and limitations.	CLO 3	2
7	Bla	7	Perform black box testing on an application using an automated testing tool. Focus on testing points such as data-driven testing, parameterization, and exception handling.	CLO 4	2
8	System Testing	8	Conduct system testing on a complete application based on its functional and non-functional requirements. Report and track defects using a bug tracking tool, ensuring the overall system's quality and performance.	CLO 4	2
9	comprehensive test management tool	9	Investigate the features and usage of QA Complete, a comprehensive test management tool. Learn how to manage test cases, test plans, and test executions effectively.	CLO 5	2
10	Automate the test cases	10, 11	Automate the test cases using the QA Complete tool. Focus on scripting, executing, and maintaining automated tests to enhance testing efficiency	CLO 5	4
11	raising and reporting bugs	12, 13	Learn the process of raising and reporting bugs using bug tracking tools such as Bugzilla or Jira. Use QA Complete for integration and streamline the defect management process	CLO5	4
12	open-source testing tools	14, 15	Explore and analyze open-source testing tools like Web Performance Analyzer or Open-Source Test Automation (OSTA). Evaluate their capabilities and applications in various testing scenarios.	CLO 5	4

## Learning Resources:

### Text Books:

1. Naresh Chauhan "Software Testing Principles and Practices", Oxford University Press, 2010
2. Software Engineering – A Practitioners Approach, Roger S. Pressman, 7thEdition, Tata McGraw Hill, 20

**Reference Books:**

1. Effective Methods of Software Testing, William E Perry, 3rd Edition, Wiley Publishing Inc
2. Managing the Testing Process: Practical Tools and Techniques for Managing Hardware and Software Testing, Rex Black, Microsoft Press, 1999
3. Agile Testing: A Practical Guide for Testers and Agile Teams, Lisa Crispin and Janet Gregory, 1st Edition, Addison-Wesley Professional, 2008
4. Software Testing Principles and Practices By Srinivasan Desikan, Gopaldaswamy Ramesh, Pearson

**Online Resources/E-learning Resources:**

2. <https://www.geeksforgeeks.org/software-testing-tutorial/>
3. <https://onlinecourses.nptel.ac.in/noc22-cs61/preview>

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester:6</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Design and Analysis of Algorithms</b>			<b>Course Code/ Course Type</b>		<b>UBTCE311/ PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	

Pre-Requisite:

1. Knowledge of C Programming and DSA

<b>Course Objectives (CO):</b>	<p><b>The objectives of Design and Analysis of Algorithms are:</b></p> <ol style="list-style-type: none"> <li>1. To know the basics of computational complexity analysis and various algorithm design strategies.</li> <li>2. Explain and demonstrate Divide and Conquer and greedy method to provide solutions for well-known problems like Sorting, Knapsack problem, Single-source Shortest Path, etc.</li> <li>3. Use Dynamic Programming to solve problems like Travelling Salesperson (TSP), etc. and also compare with Greedy method.</li> <li>4. Choose Backtracking Algorithms for solving N Queens, Sum of subsets Problems.</li> <li>5. Provide understanding of computational complexity theory, including P, NP, NP-Complete, and NP-Hard classes of problems.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Compare worst-case running time of algorithms and describe the fundamental of algorithmic problems.</li> <li>2. Describe and apply problem solving techniques such as divide-and-conquer, greedy method, dynamic programming, etc.</li> <li>3. Apply problem solving Optimization techniques using dynamic programming.</li> <li>4. Compare and contrast among various problem solving techniques.</li> <li>5. Explain and demonstrate NP- completeness.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>INTRODUCTION:</b> Analysis of Algorithm: Efficiency- Analysis framework, asymptotic notations – big O, theta and omega, Brute Force solution to 8 queens' problem, Analysis of non-recursive and recursive algorithms: Solving Homogenous Recurrence Equations using Masters theorem and Substitution method.	<b>CLO 1</b>	<b>9</b>

UNIT II		
<b>DIVIDE AND CONQUER AND GREEDY METHOD:</b> Divide & Conquer: General method, Quick Sort – Worst, Best and average case. Binary search, Finding Max-Min, Large integer Multiplication (for all above algorithms analysis to be done with recurrence). Greedy Method: General method and characteristics, Prims and Kruskal’s method for MST (using $n \log n$ complexity), Dijkstra’s Algorithm, Fractional Knapsack problem, Job Sequencing, Huffman Tree and Huffman Coding Algorithm	<b>CLO 2</b>	<b>9</b>
UNIT III		
<b>DYNAMIC PROGRAMMING:</b> General strategy, Principle of optimality, 0/1 knapsack Problem, Bellman- Ford Algorithm, Multistage Graph problem (using Forward computation), Travelling Salesman Problem, Floyd Warshall Algorithms for all pair shortest path problem, example and its complexity analysis.	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>BACKTRACKING:</b> Brute Force method: Introduction to Brute Force method & Exhaustive search, Brute Force solution to 8 queens problem. General method, Recursive backtracking algorithm, Iterative backtracking method. n-Queen problem, Hamiltonian Cycle, Sum of subsets, Graph coloring, Knapsack Problem.	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>BRANCH and BOUND:</b> The method, Control abstractions for Least Cost Search, Bounding, FIFO branch and bound, LC branch and bound, Knapsack problem – LC branch and bound and FIFO branch and bound solution, Traveling salesperson problem-LC branch and bound, The classes: P, NP, NP Complete, NP Hard.	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Introduction to Algorithms, Cormen Thomas, Leiserson CE, Rivest RL, PHI.
2. Analysis and Design of Algorithm. Horowitz and Sahani, Computer Science Press, Latest Edition.

### Reference Books:

1. The Design and Analysis of Algorithm, Ullmann, Addison-Wesley, Latest Edition.
2. Algorithm Design, Michael T Goodrich, Roberto Tamassia, Wiley India.

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 6</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Design And Analysis of Algorithms Lab</b>			<b>Course Code/ Course Type</b>		<b>UBTCE312/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
-	1	-	1	2	25	-	25	

Pre-Requisite:

1. Knowledge of C Programming and DSA

<b>Course Objectives (CO):</b>	<p><b>The objectives of Design And Analysis of Algorithms Laboratory are:</b></p> <ol style="list-style-type: none"> <li>1. Understand and apply fundamental sorting and searching algorithms for problem-solving.</li> <li>2. Analyze and compare the performance of advanced sorting techniques and their suitability for different problems.</li> <li>3. Explore optimization problems using Greedy algorithms and Dynamic Programming strategies.</li> <li>4. Apply backtracking and recursive approaches to solve combinatorial and constraint satisfaction problems.</li> <li>5. Apply branch-and-bound and related strategies to solve NP-hard optimization problems effectively.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Implement basic iterative sorting algorithms and binary search using the divide and conquer approach.</li> <li>2. Implement and evaluate advanced sorting algorithms like Merge Sort, Heap Sort, and Quick Sort.</li> <li>3. Solve optimization problems like the Knapsack problem and analyze the effectiveness of Greedy vs Dynamic Programming approaches.</li> <li>4. Solve N-Queens problem using backtracking to demonstrate recursive problem-solving techniques.</li> <li>5. Solve Travelling Salesman Problem using the Least Cost Branch and Bound method and analyze the solution path and cost.</li> </ol>

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Basic iterative sorting algorithms	1	Basic iterative sorting algorithms: Bubble Sort, selection Sort, Insertion Sort.	CLO 1	2
2	Searching Techniques	2	Binary Search with Divide and conquer approach.	CLO 1	2
3	Sorting Techniques	3	Merge Sort, Heap sort, Quick Sort.	CLO 2	2
4	Selection Problem	4	Fractional Knapsack Problem, Job sequencing with deadline	CLO 2	2

5	Fractional Knapsack Problem	5	Write a program to implement Fractional knapsack using Greedy algorithm and 0/1 knapsack using dynamic programming. Show that Greedy strategy does not necessarily yield an optimal solution over a dynamic programming approach.	CLO 3	2
6	Dynamic Programming	6, 7	Write a program to implement Bellman-Ford Algorithm using Dynamic Programming and verify the time complexity	CLO 3	4
7	N Queens Problem	8, 9	Write a recursive program to find the solution of placing n queens on the chessboard so that no two queens attack each other using Back-tracking	CLO 4	4
8	Travelling Salesman Problem	10, 11	Write a program to solve the travelling salesman problem and to print the path and the cost using LC Branch and Bound.	CLO 5	4
9	Mini Project	12, 13, 14, 15	Mini project to solve real word problem using concepts of DAA	1, 2, 3, 4, 5	8

Pre-Requisite:

1. Programming (preferably Python), Probability and Statistics, Linear Algebra, Data Structures

<b>Course Objectives (CO):</b>	<p><b>The objectives of Machine Learning with Python are:</b></p> <ol style="list-style-type: none"> <li>1. Understand machine learning concepts, categories, and model development process.</li> <li>2. Apply unsupervised learning methods and Python libraries to cluster and reduce data dimensions.</li> <li>3. Explore feature engineering techniques to improve model performance using Python tools.</li> <li>4. Evaluate supervised and unsupervised machine learning models using appropriate evaluation metrics.</li> <li>5. Implement and analyze ensemble learning approaches for better predictive accuracy.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Describe the fundamental concepts and categories of machine learning and outline the steps of model building.</li> <li>2. Implement clustering and dimensionality reduction algorithms using Python for unsupervised learning tasks.</li> <li>3. Apply feature engineering techniques for effective data preparation and model enhancement.</li> <li>4. Use model evaluation techniques to assess the performance of supervised and unsupervised models.</li> <li>5. Develop ensemble learning models and compare their effectiveness with individual learning models.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Machine Learning :</b> Definition and Scope of Machine Learning, Categories of Machine Learning (Supervised, Unsupervised, Semi-supervised, Reinforcement Learning), Real-World Applications of Machine Learning Basic Steps in Building a Machine Learning Model, Introduction to Python Libraries for Machine Learning (numpy, pandas, matplotlib, scikit-learn)	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
Introduction to Unsupervised Learning and its Applications, <b>Clustering Techniques :</b> K-means, Hierarchical Clustering, DBSCAN <b>Dimensionality Reduction Techniques :</b> PCA, t-SNE <b>Python Libraries for Unsupervised Learning :</b> scikit-learn, scipy, matplotlib <b>case Study :</b> Implement clustering and dimensionality reduction using Python	<b>CLO 2</b>	<b>9</b>

UNIT III		
<b>Feature Engineering :</b> Importance of Feature Engineering in Machine Learning, <b>Feature Selection Methods :</b> Filter, Wrapper, Embedded Techniques <b>Feature Extraction Techniques :</b> PCA, LDA, Feature Encoding (Label Encoding, One-Hot Encoding), Feature Scaling and Normalization <b>Python Libraries for Feature Engineering :</b> scikit-learn, pandas, feature-engine <b>Case Study :</b> Feature selection, extraction, and transformation in Python	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Model Evaluation Techniques :</b> <b>Supervised Model Evaluation :</b> Accuracy, Precision, Recall, F1-Score, Confusion Matrix, ROC-AUC <b>Unsupervised Model Evaluation :</b> Silhouette Score, Davies-Bouldin Index, Elbow Method <b>Cross-Validation Techniques :</b> K-Fold, Stratified K-Fold, Leave-One-Out <b>Python Libraries for Model Evaluation :</b> scikit-learn, matplotlib, seaborn <b>Case Study :</b> Evaluate supervised and unsupervised models using Python	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Ensemble Learning Approaches :</b> Introduction to Ensemble Learning and its Advantages, Bagging Techniques (Random Forest, Bootstrap Aggregation), Boosting Techniques (AdaBoost, Gradient Boosting, XGBoost), Voting Classifier and Stacking Models, Python Implementation of Ensemble Learning using scikit-learn, xgboost	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

--	--

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	ML Model Steps	1	Implement basic steps of machine learning: data loading, splitting, training, and testing using a simple classifier	CLO 1	2
2	ML Categories Demo	2	Simulate supervised and unsupervised learning with simple Python examples	CLO 1	2
3	K-Means Clustering	3	Implement K-means clustering using Python on a sample dataset and visualize the clusters.	CLO 2	2
4	PCA Dimensionality Reduction	4	Apply Principal Component Analysis (PCA) for reducing the dimensionality of a dataset and visualize the results.	CLO 2	2

5	Feature Selection	5	Perform feature selection using filter (Correlation) and wrapper (RFE) methods using scikit-learn.	CLO 3	2
6	Feature Scaling	6	Implement feature scaling techniques (Standardization, Min-Max Scaling) and observe their effect on model performance.	CLO 3	2
7	Supervised Evaluation	7	Evaluate a supervised classification model using confusion matrix, accuracy, precision, recall, and F1-score.	CLO 4	2
8	Unsupervised Evaluation	8	Evaluate clustering results using silhouette score and Davies-Bouldin Index.	CLO 4	2
9	Ensemble Model Building	9, 10	Implement Random Forest and XGBoost classifiers and compare their performance with basic decision tree classifier.	CLO 5	4
10	Mini Project	11, 12, 13, 14, 15	Choose a dataset (e.g., Iris, Titanic, Housing Prices) Build, tune, evaluate, and document a complete ML solution	1, 2, 3, 4, 5	10

## Learning Resources:

### Text Books:

1. Aurélien Géron, Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow, 2nd Edition, O'Reilly, 2019

1. Programming, Data Structures, Basics of Data Visualization, Human-Computer Interaction (HCI)								
<b>Course Objectives (CO):</b>			<b>The objectives of Adaptive Visualization Techniques are:</b>					
			<ol style="list-style-type: none"> <li>1. Learn basic concepts of data visualization and use appropriate charts effectively.</li> <li>2. Perform data analysis and create visualizations using Excel tools.</li> <li>3. Clean, transform, and prepare data for effective visualization.</li> <li>4. Build interactive dashboards and tell data stories using Tableau.</li> <li>5. Design adaptive and responsive visualizations with interactive features.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Identify suitable chart types and apply best practices for effective data visualization.</li> <li>2. Analyze data and create meaningful visualizations using Excel.</li> <li>3. Perform data cleaning, transformation, and wrangling for quality data preparation.</li> <li>4. Develop interactive dashboards and present insights through storytelling using Tableau.</li> <li>5. Create adaptive visualizations with interactivity and responsive design features.</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Basics of Data Visualization and Charts :</b> Introduction to Data Visualization, Importance of Visualization in Data Science <b>Types of Data:</b> Categorical, Numerical, Time-series, Geospatial <b>Basic Chart Types:</b> Bar chart, Line chart, Pie chart, Scatter plot, Histogram, Choosing the Right Chart, Principles of Effective Data Visualization (Color, Labels, Scales) <b>Case Study :</b> Creating basic charts using Python (Matplotlib) or Excel	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Data Analysis and Visualization using Excel :</b> Data Preprocessing and Cleaning in Excel, Using Pivot Tables and Pivot Charts, Conditional Formatting and Data Bars, Excel Functions for Data Analysis (VLOOKUP, HLOOKUP, INDEX-MATCH, IF, SUMIFS, COUNTIFS), Chart Types in Excel: Combination Charts, Sparklines, Using Excel Dashboards for Visualization <b>Case Study :</b> Sales/Marketing Data Analysis using Excel	<b>CLO 2</b>	<b>9</b>

UNIT III		
<b>Data Wrangling Techniques</b> <b>Understanding Data Quality Issues :</b> Missing Data, Outliers, Duplicates, Data Cleaning Methods, <b>Data Transformation :</b> Scaling, Normalization, Encoding Data Aggregation and Grouping, Merging and Joining Datasets, Hands-on with Pandas (Python) or Power Query (Excel) <b>Case Study :</b> Preparing a dataset for visualization	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Data Storytelling and Visualization using Tableau :</b> Introduction to Tableau Interface, Connecting Tableau to Different Data Sources, Building Interactive Dashboards, Storytelling Concepts: Context, Narrative, and Visual Appeal, Filters, Parameters, and Calculated Fields in Tableau, Best Practices for Storytelling through Dashboards, <b>Case Study :</b> Business Insights Presentation using Tableau	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Adaptive Data Visualization :</b> Concept of Adaptive Visualization, Understanding Audience-Centric Visualization Design, Responsive Visualizations across Devices, <b>Using Interactivity :</b> Drill-Down, Filtering, Dynamic Views Introduction Plotly for Adaptive Visualization, Automating Visualizations using Python (Plotly Dash/Streamlit), <b>Case Study :</b> Adaptive Visualization for Real-Time Data (IoT, Web Analytics)	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Data Visualization with Python: Create an Impact with Meaningful Data Insights Using Interactive and Engaging Visuals, Mario Döbler, Tim Grössmann, Packt Publishing, 2019, ISBN: 9781789956467
2. Learning Tableau 2019: Tools for Business Intelligence, Data Prep, and Visual Analytics, Milligan Joshua N., 3rd Edition, Packt Publishing, 2019, ISBN: 9781788839525
3. Excel 2016 Bible, Walkenbach John, Wiley, ISBN: 9781119067504

### Reference Books:

1. Interactive Data Visualization with Python Present Your Data as an Effective and Compelling Story, 2nd Edition, Abha Belorkar, Sharath Chandra Guntuku, Shubhangi Hora, Anshu Kumar, 2020, ISBN: 9781800201064
2. Daniel G. Murray, Tableau Your Data! Fast and Easy Visual Analysis with Tableau Software, Wiley, 2016, ISBN: 9781119001195
3. Data Wrangling with Python Creating Actionable Data from Raw Sources, Dr. Tirthajyoti Sarkar, Shubhadeep Roychowdhury, 2019, ISBN: 9781789804249

-	1	-	1	2	25	-	25	
Pre-Requisite:								
1. Data Visualization, Human-Computer Interaction, Basic Programming (Python/JavaScript)								
<b>Course Objectives (CO):</b>			<b>The objectives of Adaptive Visualization Techniques Laboratory are:</b>					
			<ol style="list-style-type: none"> <li>1. To introduce students to dynamic, interactive, and adaptive data visualizations.</li> <li>2. To develop skills in using visualization libraries and tools for personalized data representation.</li> <li>3. To understand the principles of user-centered design in data visualization.</li> <li>4. To explore real-time, adaptive, and multimodal visualization techniques.</li> <li>5. To create custom, intelligent, and context-aware visual interfaces.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Develop static, interactive, and adaptive visualizations using various libraries and tools.</li> <li>2. Design personalized and context-aware data visualization systems.</li> <li>3. Visualize real-time and multimodal data effectively for various applications.</li> <li>4. Integrate machine learning insights into visual formats to enhance interpretability.</li> <li>5. Design and deploy a complete adaptive visualization project using real-world datasets.</li> </ol>					

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Introduction to Visualization Libraries	1	Use libraries like Matplotlib, Seaborn, Plotly, D3.js to Create static and interactive visualizations	CLO1	2
2	Building Responsive Dashboards	2	Create web-based dashboards using Dash, Streamlit, or Tableau Public	CLO1	2
3	User-driven Visualization Adaptation	3	Create Visualizations that change based on user inputs (dropdowns, sliders, filters)	CLO1	2
4	Real-Time Data Visualization	4	Visualize live data (e.g., sensor data, stock prices) using WebSockets or API feeds	CLO2	2

5	Multi-modal Data Visualization	5	Combine visual, auditory (sonification), and textual cues and Create a visualization that supports colorblind users	CLO2	2
6	Context-Aware Visualization	6	Visualizations that adapt based on time, location, or user role (e.g., admin vs. viewer)	CLO2	2
7	Personalized Visualization	7	Use user profiles or preferences to customize data representation	CLO3	2
8	Visualization with Machine Learning Models	8	Visualize ML model predictions, feature importance, decision boundaries	CLO4	2
9	Adaptive Storytelling	9	Create narrative visualizations that change dynamically based on user behavior	CLO4	4
10	Mini Project	10	Design and implement a complete adaptive visualization solution for a dataset (e.g., health data, IoT, education analytics)	1, 2, 3, 4, 5	10

## Learning Resources:

### Text Books:

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 6</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Optimization Techniques and Applications</b>			<b>Course Code/ Course Type</b>		<b>UBTCEPE309/PEC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	

Pre-Requisite:

1. Linear Algebra, Calculus, Programming Fundamentals

<b>Course Objectives (CO):</b>	<p><b>The objectives of Optimization Techniques and Applications are:</b></p> <ol style="list-style-type: none"> <li>1. Understand the fundamentals of optimization and its role in machine learning and AI model development.</li> <li>2. Apply constrained optimization techniques for effective model formulation and regularization in AI systems.</li> <li>3. Explore various hyperparameter optimization strategies for tuning machine learning models.</li> <li>4. Implement metaheuristic optimization techniques to enhance model performance in AI applications.</li> <li>5. Analyze and apply multi-objective and reinforcement-based optimization methods in complex AI problem scenarios.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Describe the role of optimization in ML/AI and apply gradient-based methods for loss minimization.</li> <li>2. Formulate and solve constrained optimization problems and apply them in AI model design.</li> <li>3. Implement hyperparameter tuning using grid search, random search, and Bayesian optimization techniques.</li> <li>4. Apply metaheuristic algorithms like GA, PSO, and DE to optimize AI models and learning systems.</li> <li>5. Demonstrate the use of multi-objective optimization and reinforcement learning-based methods for AI decision-making tasks.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Fundamentals of Optimization for ML/AI :</b> Role of Optimization in Machine Learning and AI, Convex vs. Non-Convex Optimization, Objective Functions and Loss Functions in ML, Gradient Descent and Its Variants (SGD, Momentum, RMSProp, Adam), Introduction to Hyperparameter Tuning	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Constrained Optimization in AI Models :</b> Optimization under Equality and Inequality Constraints, Lagrange Multipliers and Karush-Kuhn-Tucker (KKT) Conditions, Quadratic Programming for Support Vector Machines (SVMs), Constraint Handling in Deep Learning (e.g., Weight Constraints), Applications in Feature Selection and Regularization (L1, L2, ElasticNet)	<b>CLO 2</b>	<b>9</b>

UNIT III		
<b>Hyperparameter Optimization Techniques :</b> Grid Search and Random Search, Bayesian Optimization for Hyperparameter Tuning, Hyperband and Successive Halving Algorithms, Use of Optuna, Hyperopt, and Scikit-Optimize Python Libraries, Case Study: Hyperparameter Tuning for Neural Networks and XGBoost	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Metaheuristic Optimization in AI :</b> Introduction to Metaheuristics in AI Context, Genetic Algorithms for Feature Selection and Neural Architecture Search, Particle Swarm Optimization (PSO) for Neural Network Weight Initialization, Differential Evolution and Evolution Strategies in Model Tuning, Use Cases: Clustering Parameter Optimization, Rule-based System Optimization	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Multi-objective and Reinforcement-based Optimization :</b> Multi-objective Optimization and Pareto Front in AI, Trade-offs Between Accuracy, Time, and Resource Usage, Policy Gradient Methods in Reinforcement Learning (REINFORCE, PPO), Q-learning and Deep Q-Network (DQN) Optimization, Case Study: Multi-objective Optimization in Deep Reinforcement Learning	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Optimization Models, Giuseppe C. Calafiore, Laurent El Ghaoui, 2014, ISBN: 9781107050877
2. MULTI-OBJECTIVE OPTIMIZATION USING EVOLUTIONARY ALGORITHMS, Kalyanmoy Deb, 2010, ISBN: 9788126528042
3. Numerical Optimization, Jorge Nocedal, Stephen Wright, 2006, ISBN: 9780387400655

### Reference Books:

1. Automated Machine Learning Hyperparameter Optimization, Neural Architecture Search, and Algorithm Selection with Cloud Platforms, Adnan Masood, 2021, ISBN: 9781800565524
2. Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow Concepts, Tools, and Techniques to Build Intelligent Systems, Aurélien Géron, 2019, ISBN: 9781492032618

### Online Resources/E-learning Resources:

2. Coursera: <https://www.coursera.org/learn/optimize-machine-learning-model-performance>

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 6</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Applied Data Science</b>			<b>Course Code/ Course Type</b>		<b>UBTCEPE310/PEC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	

Pre-Requisite:

1. Python Programming, Probability and Statistics, Basic Linear Algebra

<b>Course Objectives (CO):</b>	<p><b>The objectives of Applied Data Science are:</b></p> <ol style="list-style-type: none"> <li>1. Understand the fundamental concepts of data science and apply data acquisition techniques from various sources.</li> <li>2. Perform data cleaning, integration, and transformation using appropriate Python tools.</li> <li>3. Conduct exploratory data analysis (EDA) and understand feature behavior through visualization and profiling.</li> <li>4. Apply data science methods to solve domain-specific problems across various industries.</li> <li>5. Learn model deployment techniques and apply automation and monitoring strategies in data science projects.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Acquire and handle data from APIs, web scraping, databases, and other external sources for data science tasks.</li> <li>2. Clean, integrate, and transform data effectively for analytical modeling and insights generation.</li> <li>3. Perform exploratory data analysis and interpret feature relationships using visualization tools.</li> <li>4. Solve domain-specific real-world problems using appropriate data science techniques and analytics.</li> <li>5. Deploy machine learning models as services and automate workflows for real-time data science solutions.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Data Science and Data Acquisition :</b> What is Data Science? Scope, Process, and Applications, CRISP-DM and OSEMN Frameworks of Data Science, Data Types, Data Sources (APIs, Web Scraping, Open Datasets, Databases), Data Acquisition Techniques: Web Scraping using BeautifulSoup, Scrapy, API Integration, Data Collection from SQL and NoSQL Databases	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Data Cleaning, Integration, and Transformation :</b> Data Cleaning Techniques (Handling Missing Values, Outliers, Duplicate Records), Data Integration from Multiple Sources, Data Transformation: Encoding, Binning, Aggregation, Data Imputation Techniques: Simple, KNN, Iterative, Practical Hands-on with pandas, numpy, and missingno for Data Wrangling	<b>CLO 2</b>	<b>9</b>

UNIT III		
<b>EDA and Feature Understanding :</b> Understanding Distributions, Correlations, and Patterns in Data, Visualization Techniques for EDA: Histograms, Boxplots, Heatmaps, Pairplots, Data Profiling and Summary Statistics, Understanding Feature Importance and Interaction, Tools and Libraries: pandas-profiling, matplotlib, seaborn, sweetviz	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Domain-Specific Applications of Data Science :</b> Data Science in Finance: Fraud Detection, Risk Analysis, Healthcare Data Science: Patient Monitoring, Disease Prediction, Social Media Analytics: Sentiment Analysis, Trend Identification, Data Science for IoT: Sensor Data Analysis, Predictive Maintenance, Retail and Marketing: Customer Segmentation, Recommendation Systems	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Model Deployment, Monitoring, and Automation :</b> Basics of Model Deployment: Saving Models using joblib and pickle, Model Deployment using Flask or FastAPI for RESTful Services, Monitoring Model Performance Post-Deployment, CI/CD Concepts for Data Science Projects, Introduction to MLOps: Model Lifecycle Management, Automation of Workflows	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Python for Data Analysis: Data Wrangling with Pandas, NumPy, and IPython, Wes McKinney, 2017, ISBN: 9781491957615
2. Data Science from Scratch: First Principles with Python, Joel Grus, 2015, ISBN: 9781491904404
3. Building Machine Learning Pipelines, Hannes Hapke, Catherine Nelson, 2020, ISBN: 9781492053149

### Reference Books:

1. Hands-On Machine Learning with Scikit-learn and Scientific Python Toolkits: A Practical Guide to Implementing Supervised and Unsupervised Machine Learning Algorithms in Python, Tarek Amr, 2020, ISBN: 9781838823580
2. Data Science for Business: What You Need to Know about Data Mining and Data-Analytic Thinking, Foster Provost, Tom Fawcett, 2013, ISBN: 9781449374297

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester:6</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Data Science and Pattern Recognition using Python</b>			<b>Course Code/ Course Type</b>		<b>MOOCCE601/MOOC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>25</b>	<b>-</b>	<b>25</b>	

Pre-Requisite:

1. Proficiency in Python programming
2. Basic understanding of statistics and linear algebra
3. Familiarity with machine learning concepts

<b>Course Objectives (CO):</b>	<p><b>The objectives of Data Science and Pattern Recognition using Python are:</b></p> <ol style="list-style-type: none"> <li>1. Understand the Fundamentals of Data Science and Pattern Recognition</li> <li>2. Perform Data Preprocessing and Exploratory Data Analysis</li> <li>3. Build and Evaluate Machine Learning Models for Pattern Recognition</li> <li>4. Design and Train Deep Learning Models for Image Recognition</li> <li>5. Apply Reinforcement Learning Techniques to Build Intelligent Agents</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Apply Python for data acquisition, cleaning, transformation, and exploratory data analysis</li> <li>2. Use pattern recognition techniques such as classification, clustering, and dimensionality reduction</li> <li>3. Build and train deep neural networks for image and text recognition tasks</li> <li>4. Understand and implement reinforcement learning strategies using Q-learning and policy gradients</li> <li>5. Integrate machine learning and deep learning models into data-driven applications</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Data Science and Pattern Recognition</b> What is data science? Overview and process,Introduction to pattern recognition: types, applications,Python for data science: NumPy, Pandas, Matplotlib,Case study: Recognizing handwritten digits (MNIST).	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Data Preprocessing and Exploratory Data Analysis</b> Data collection and cleaning techniques, Feature selection and engineering, Exploratory data analysis: visualization, correlation, outliers, Tools: Seaborn, pandas-profiling, Lab: Data wrangling and EDA on real-world datasets	<b>CLO 2</b>	<b>6</b>

<b>UNIT III</b>		
<b>Pattern Recognition and Machine Learning Models</b> Supervised learning: SVM, k-NN, Decision Trees, Naive Bayes, Unsupervised learning: K-Means, DBSCAN, Hierarchical Clustering , Dimensionality reduction: PCA, t-SNE, Model evaluation: confusion matrix, ROC, cross-validation, Lab: Implementing classification and clustering models	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Deep Learning for Pattern Recognition</b> Neural networks and deep learning foundations, Activation functions, forward/backward propagation, Convolutional Neural Networks (CNNs) for image recognition, Using TensorFlow/Keras for DNN implementation, Based on Deep Neural Network by DeepLearning.AI, Lab: Build a CNN to classify images (CIFAR-10 or MNIST)	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Reinforcement Learning and Intelligent Agents</b> Fundamentals of reinforcement learning, Q-learning and policy gradient methods (REINFORCE, PPO), Exploration vs exploitation, rewards, and environment modeling, Applications in robotics, game AI, and recommendation systems, Based on Fundamentals of Reinforcement Learning by University of Alberta, Lab: Use OpenAI Gym to train a basic RL agent	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. "Pattern Recognition and Machine Learning" by Christopher M. Bishop
2. "Python Data Science Handbook" by Jake VanderPlas

### Reference Books:

1. "Deep Learning" by Ian Goodfellow, Yoshua Bengio, and Aaron Courville
2. "Reinforcement Learning: An Introduction" by Richard S. Sutton and Andrew G. Barto
3. "Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow" by Aurélien Géron

### Online Resources/E-learning Resources:

1. <https://www.coursera.org/learn/fundamentals-of-reinforcement-learning>
2. <https://www.coursera.org/learn/deep-neural-network>

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 6</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Redhat Openstack Administration</b>			<b>Course Code/ Course Type</b>		<b>MOOCCE602/MOOC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>2</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>2</b>	<b>25</b>	<b>-</b>	<b>25</b>	

Pre-Requisite:

1. Red Hat Certified System Administrator (RHCSA) or equivalent Linux administration skills.
2. Familiarity with basic virtualization concepts.
3. Basic understanding of networking fundamentals (IP addressing, routing, etc.).

<b>Course Objectives (CO):</b>	<p><b>The objectives of Red Hat OpenStack Administration are:</b></p> <ol style="list-style-type: none"> <li>1. To introduce the fundamentals of cloud computing and OpenStack architecture</li> <li>2. To provide practical experience with OpenStack services</li> <li>3. To equip students with the skills to deploy, configure, and manage core OpenStack services</li> <li>4. To develop proficiency in using the OpenStack CLI and Horizon dashboard</li> <li>5. To enable students to troubleshoot and resolve issues</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Understand the OpenStack architecture and its components</li> <li>2. Deploy a multi-node OpenStack environment</li> <li>3. Configure and manage OpenStack services including Keystone, Glance, Nova, Neutron, Cinder, and Horizon</li> <li>4. Implement networking and storage solutions using Neutron and Cinder</li> <li>5. Perform administrative tasks such as instance provisioning, image management, and user access control and troubleshoot common OpenStack issues</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction and Architecture</b> Overview of OpenStack and cloud computing concepts OpenStack services and architecture (Keystone, Nova, Neutron, Glance, Cinder, Horizon) OpenStack deployment models and use cases Lab: Navigating the OpenStack CLI and Dashboard (Horizon).	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Installation and Core Services</b> OpenStack deployment using Packstack or Director (OSP Director) Installing and configuring Keystone (identity service) Managing users, tenants, and roles. Lab: Deploy a basic OpenStack environment	<b>CLO 2</b>	<b>6</b>

UNIT III		
<b>Compute, Image, and Networking</b> Nova (compute) configuration and instance management. Glance (image service) operations and image management. Neutron (networking) concepts: provider networks, tenant networks, routers. Lab: Launch an instance with networking and image configuration	<b>CLO 3</b>	<b>6</b>
UNIT IV		
<b>Block Storage, Dashboard, and Troubleshooting</b> Cinder (block storage) setup and volume provisioning. Horizon dashboard overview and usage. Common troubleshooting strategies and log file analysis. Lab: Attach volumes to instances, resolve common deployment issues	<b>CLO 4</b>	<b>6</b>
UNIT V		
<b>Advanced Topics and Security</b> OpenStack high availability concepts OpenStack security best practices Performance tuning and monitoring Review and practice exam Lab: Secure OpenStack services, set up high availability (conceptual).	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

## Learning Resources:

### Text Books:

1. Official Red Hat Courseware for CL110 – Provided by Red Hat Learning Subscription (RHLS)
2. Red Hat OpenStack Platform Documentation (Latest Version)

### Reference Books:

1. "Essential Scrum: A Practical Guide to the Most Popular Agile Process" by Kenneth S. Rubin.
2. "OpenStack Administration with Ansible" by Walter Bentley – Packt Publishing
3. "OpenStack in Action" by Cody Bumgardner – Manning Publications
4. "Learning OpenStack Networking (Neutron)" by James Denton – Packt Publishing

### Online Resources/E-learning Resources:

1. EX210 – Red Hat Certified Specialist in OpenStack exam. It is recommended (but not mandatory) to take the Red Hat Certified System Administrator (RHCSA) exam prior to EX210
2. Red Hat Learning Subscription (RHLS)

<b>Name of the Program:</b>		<b>Foreign Language</b>			<b>Semester:6</b>		<b>Level: UG/PG</b>	
<b>Course Name:</b>		<b>German-IV</b>			<b>Course Code/ Course Type</b>		<b>UFL302 A/VSEC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>

<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>-</b>	
Pre-Requisite:								
1. Can use simple means to describe the things related to immediate needs								
<b>Course Objectives (CO):</b>			<b>The objectives of German A2.2 are:</b>					
			<ol style="list-style-type: none"> <li>1. To understand the main points when the standard language is used.</li> <li>2. Describe dreams, goals and hopes.</li> <li>3. To implement the acquired grammar topics.</li> <li>4. To deal with most situations typically encountered in the language region.</li> <li>5. To Design and create texts in the areas of Personal interest.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Learn advance vocabulary terms.</li> <li>2. Enhance expression skills in German language.</li> <li>3. Enhance professional speaking skills of German language.</li> <li>4. Construct short statements justifying own views and plans.</li> <li>5. Participate in an interaction associated with the topics such as work, school, leisure time, travelling ex.</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Gelernt ist gelernt</b> Different learning problems, exams and presentations Grammar – KII, Genetive	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Sportlich sportlich</b> Different sport activities, connection between sport and different emotions, Grammar – deshalb and trotzdem	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>Zusammen leben</b> Conflicts in an apartment, living in different types and living with pets Grammar –Connectors (als and wenn)	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Gute unterhaltung</b> Describe a picture, discussion on different music styles Grammar – Interrogative articles	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Wie die Zeit vergeht! and Typisch, oder?</b> Express different wishes, write a story, speak about proverbs, speak about cliché Grammar – Relative sentences	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

Name of the Program:		B.Tech/B.B.A/ B.C.A/B.Sc/ B.Pharm			Semester: 6		Level: UG	
Course Name:		UHV-I: Professional Ethics			Course Code/ Course Type		ACCEVS301/AC	
Course Pattern:		2025			Version		1.3	
Assessment Scheme					Teaching Scheme			
Theory	Practical	Tutorial	Total Credits	Hours	CIA (Continuous Internal Assessment)	ESA (End Semester Assessment )	Practical/ Oral	
2	-	-	-	2	-	-	-	
Pre-Requisite: 1. UHV-I								
Course Objectives (CO):			<b>The objectives of UHV-I: Professional Ethics are:</b> <ol style="list-style-type: none"> <li>1. To make the students understand the importance of ethical behavior.</li> <li>2. To expose the students to the ethical practices to be followed in profession.</li> <li>3. To sensitize the students to become responsible persons who will uphold ethics in profession when they pursue their career learning.</li> <li>4. To make students understand Psychological and Philosophical approaches.</li> <li>5. To make students understand social responsibility and corporate Sustainability .</li> </ol>					
Course Learning Outcomes (CLO):			<b>Students would be able to:</b> <ol style="list-style-type: none"> <li>1. Equip themselves with an understanding of moral, professional and personal values. .</li> <li>2. Learn the need of ethics in shaping their profession The learners will hone their decision-making skills .</li> <li>3. Refine their business ethics based on psychological and philosophical perspective.</li> <li>4. Assess the need for a balance between ecology, and economy.</li> <li>5. Equip themselves with a better understanding of themselves and the society they live in and the responsibilities they shoulder in creating a sustainable world.</li> </ol>					

### Course Contents/Syllabus:

Descriptors/Topics	CLO	Hours
<b>UNIT I</b>		
<b>Individual and Professional Ethics</b> Introduction to Professional Ethics, Morals, Values and Ethics – Personal and Professional- Sense of Professional Ethics – Code of Ethics by NSPE-Making decisions with ethical dimensions–definition–roadmap to ethical decision making–common standards– internal obstacles – bias – empathy	<b>CLO 1</b>	<b>8</b>
<b>UNIT II</b>		
<b>Business Ethics</b> Philosophical approaches to Business Ethics – ethical reasoning – ethical issues in business - Social Responsibility of Business- conflict of interest–cultural relativism- Ethical Leadership-Resisting un-ethical authority and domination-Global Business Ethics	<b>CLO 2</b>	<b>5</b>

UNIT III		
<b>Psychological Approaches</b> Ethical Theories-Psychological and Philosophical Approaches-Myths about Morality-conflict of interest in psychological perspective - Courage-Integrity – ethical dilemma – Emotional Intelligence (Mahabharata- Iskcon Publications)	<b>CLO 3</b>	<b>6</b>
UNIT IV		
<b>Workplace Ethics</b> Ethics in changing domains of Research-academic integrity-intellectual honesty-Role of Engineers and Managers-Ethical issues in Diverse workplace – competition – free will- Confidentiality – employee rights – Intellectual property rights – discrimination	<b>CLO 4</b>	<b>5</b>
UNIT V		
<b>Safety, Responsibilities and Rights</b> Ecology, and Economy-Risk benefit analysis and reducing risk SDGs–Corporate social responsibility and Corporate Sustainability - CSR in India - Sustainability Case Studies	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	

Pre-Requisite:

1. Programming (preferably Python), Probability and Statistics, Linear Algebra, Data Structures

<b>Course Objectives (CO):</b>	<p><b>The objectives of Mobile Application Development are:</b></p> <ol style="list-style-type: none"> <li>1. Understand the fundamental concepts of React Native and apply basic component-based development techniques.</li> <li>2. Explore user interaction handling and implement navigation between screens in React Native applications.</li> <li>3. Apply styling, layout principles, and basic animation techniques for responsive mobile app design.</li> <li>4. Integrate APIs, handle data fetching, and implement local storage for managing application data effectively.</li> <li>5. Utilize advanced features, perform app testing, and deploy React Native applications on mobile platforms.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Develop React Native applications using components, props, state, and basic UI elements.</li> <li>2. Implement user input handling, gesture interactions, and navigation between multiple screens.</li> <li>3. Design visually appealing and responsive mobile interfaces using styling, layout systems, and animations.</li> <li>4. Perform data fetching from APIs, display data using lists, and manage local storage using AsyncStorage.</li> <li>5. Integrate device features, debug applications, and deploy React Native apps to Google Play and Apple App Stores.</li> </ol>

## Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Basics of React Native :</b> Introduction to React Native: Concept, History, and Benefits, Why Choose React Native? Comparison with Native and Hybrid Approaches, Setting up the Development Environment (Node.js, NPM, Expo CLI, Android Studio, Xcode Basics), Understanding JSX and the Component Model, Functional Components vs. Class Components, Rendering Basic UI Components: View, Text, Image, ScrollView, Introduction to Props and State	<b>CLO 1</b>	<b>9</b>

UNIT II		
<b>User Interaction and Navigation :</b> , Handling User Inputs: TextInput, Button, Switch, Slider, Event Handling and Method Binding in React Native, Touchable Elements: TouchableOpacity, TouchableHighlight, TouchableWithoutFeedback, Navigation Between Screens using React Navigation Library, Stack Navigator, Tab Navigator, and Drawer Navigation Basics, Passing Data Between Screens	<b>CLO 2</b>	<b>9</b>
UNIT III		
<b>Styling, Layout, and Animations :</b> Styling Components using StyleSheet, Flexbox Layout System in React Native, Platform-Specific Design: Platform, Dimensions, and Conditional Styling, Introduction to Animations: Animated API Basics, Simple Transitions and Animated Interactions, Responsive Design Principles for Mobile Applications	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Data Handling, APIs, and Local Storage :</b> Fetching Data from External APIs using fetch and axios, Working with JSON Data and Rendering Lists (FlatList, SectionList), Using AsyncStorage for Local Data Persistence, Introduction to Context API for Application-wide State Management, Error Handling, Network Request Status Handling	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Advanced Features and Deployment of React Native Apps :</b> Introduction to Native Modules and Linking in React Native, Working with Device Features: Camera, Location, and Permissions, Debugging and Testing React Native Applications (Expo Dev Tools, React Native Debugger), Preparing and Building Apps for Deployment (APK, IPA), Steps to Publish React Native Apps on Google Play Store and Apple App Store, Best Practices and App Maintenance Guidelines	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. React Native for Mobile Development, Akshat Paul, Abhishek Nalwaya, ISBN: 978-1-4842-4453-1, apress, 2017 edition
2. React Native in Action Developing IOS and Android Apps with JavaScript, Nader Dabit, Manning, 2019, ISBN: 9781638355892

### Reference Books:

1. React Native Cookbook: Recipes for Solving Common React Native Development Problems, Ward Dan, Packt Publishing, 2019, ISBN: 9781788990431
2. React and React Native, Boduch Adam, Packt Publishing, 2017, ISBN: 9781786469571

### Online Resources/E-learning Resources:

1. Coursera: <https://www.coursera.org/learn/react-native-developing-android-and-ios-apps>
2. Coursera: <https://www.coursera.org/learn/react-native-course>

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 7</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Mobile Application Development Laboratory</b>			<b>Course Code/ Course Type</b>		<b>UBTCE402/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
-	1	-	1	2	25	-	25	

Pre-Requisite:

1. Web Development Basics, Operating System

<b>Course Objectives (CO):</b>	<p><b>The objectives of Mobile Application Development Laboratory are:</b></p> <ol style="list-style-type: none"> <li>1. Understand and implement basic React Native components, props, and state for creating simple mobile applications.</li> <li>2. Handle user inputs and navigation between screens to develop interactive multi-screen applications.</li> <li>3. Apply styling, Flexbox layout, and basic animation techniques to design responsive and visually appealing mobile interfaces.</li> <li>4. Integrate REST APIs and implement local storage for effective data management within mobile applications.</li> <li>5. Explore device-specific features and prepare mobile applications for real-world deployment.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Develop mobile applications using fundamental React Native components, props, and state management.</li> <li>2. Implement user interaction handling and navigate across screens using React Navigation.</li> <li>3. Design responsive layouts and apply simple animations to enhance user experience in mobile applications.</li> <li>4. Perform data fetching from APIs, handle JSON responses, and manage persistent data using AsyncStorage.</li> <li>5. Access device features like camera or location and demonstrate deployment-ready mobile app functionality.</li> </ol>

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	App Layout Basics	1	Create a simple React Native app displaying a welcome message using Text, View, and Image components.	CLO 1	2
2	Props and State Demo	2	Implement an application demonstrating the use of props, state, and event handling.	CLO 1	2
3	Input Handling App	3	Build an app with TextInput, Button, and display the entered text using event handling.	CLO 2	2
4	Multi-Screen Navigation	4	Create a two-screen app using Stack Navigator and pass data between screens.	CLO 2	2
5	Flexbox Layout Design	5	Design a responsive page layout using Flexbox properties for alignment and spacing.	CLO 3	2

6	Simple Animation Effects	6	Apply basic Animated API to create a fade-in effect for a component.	CLO 3	2
7	API Data Fetching	7	Fetch data from a public REST API and display it in a list using FlatList.	CLO 4	2
8	Local Storage Example	8	Store and retrieve user preferences using AsyncStorage.	CLO 4	2
9	Device Feature Access	9, 10	Develop an app that accesses the device's camera or location using appropriate permissions	CLO 5	4
10	Mini Project	11, 12, 13, 14, 15	Develop database driven Mobile Application	1, 2, 3, 4, 5	10

### Online Resources/E-learning Resources:

1. Coursera: <https://www.coursera.org/learn/react-native-developing-android-and-ios-apps>
2. Coursera: <https://www.coursera.org/learn/react-native-course>

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 7</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Fundamentals of Deep Learning</b>			<b>Course Code/ Course Type</b>		<b>UBTCEPE401/PEC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite: 1. Linear Algebra, Probability, Calculus, Python Programming, Machine Learning Basics								
<b>Course Objectives (CO):</b>			<b>The objectives of Fundamentals of Deep Learning are:</b> 1. Introduce foundational concepts of deep learning and neural networks. 2. Enable students to understand, design, and train deep learning models. 3. Explore architectures such as CNNs, RNNs, and modern frameworks. 4. Apply deep learning to real-world problems such as image and text classification. 5. Encourage critical thinking about model evaluation, bias, and deployment.					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b> 1. Understand the principles and building blocks of deep neural networks. 2. Train, evaluate, and tune deep learning models using real datasets. 3. Apply CNNs and RNNs to solve vision and sequence-related tasks. 4. Analyze and compare architectures and optimization techniques for various applications. 5. Demonstrate awareness of deployment techniques and ethical issues in deep learning.					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Deep Learning</b> What is Deep Learning?, Deep Learning vs Traditional Machine Learning, Biological Neurons and Artificial Neurons, Perceptron and Multilayer Perceptron (MLP), Activation Functions (ReLU, Sigmoid, Tanh, Softmax), Loss Functions: MSE, Cross-Entropy	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Neural Network Training and Optimization</b> Feedforward and Backpropagation, Gradient Descent and its Variants (SGD, Adam, RMSProp), Weight Initialization, Normalization, Regularization, Overfitting and Underfitting, Hyperparameter Tuning and Model Evaluation	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>Convolutional Neural Networks (CNNs)</b> Convolution Operation and Filters, Pooling Layers: Max and Average Pooling, CNN Architectures: LeNet, AlexNet, VGG, ResNet (introductory level), Image Classification and Object Detection Basics, Transfer Learning and Fine-tuning	<b>CLO 3</b>	<b>9</b>

<b>UNIT IV</b>		
<b>Recurrent Neural Networks (RNNs) and Sequence Models</b> Introduction to Sequential Data, RNNs: Structure and Challenges (Vanishing/Exploding Gradient), Long Short-Term Memory (LSTM) and Gated Recurrent Units (GRU), Applications: Text Generation, Sentiment Analysis, Time Series Forecasting, Basics of Attention Mechanism	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
<b>Advanced Topics and Applications</b> Introduction to Transformers and BERT (conceptual overview), Generative Adversarial Networks (GANs) - Basic Concept, Autoencoders and Dimensionality Reduction, Model Deployment Overview (Flask/Streamlit/TensorFlow Lite), Ethical Considerations in Deep Learning (Bias, Fairness, Explainability)	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Ian Goodfellow, Yoshua Bengio, and Aaron Courville, Deep Learning, MIT Press, 2016.
2. Francois Chollet, Deep Learning with Python, 2nd Edition, Manning Publications, 2021.

### Reference Books:

1. Michael Nielsen, Neural Networks and Deep Learning, 2015  
(available online: <http://neuralnetworksanddeeplearning.com/>)
2. Andrew Ng, Deep Learning Specialization Notes (Coursera).
3. Josh Patterson and Adam Gibson, Deep Learning: A Practitioner's Approach, O'Reilly Media, 2017.

### Online Resources/E-learning Resources:

1. Deep Learning Specialization – Coursera by Andrew Ng
2. Fast.ai – Practical Deep Learning for Coders

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 7</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Fundamentals of Deep Learning Laboratory</b>			<b>Course Code/ Course Type</b>		<b>UBTCEPE403/PEC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
-	1	-	1	2	25	-	25	
Pre-Requisite:								
1. Python Programming, Machine Learning Basics, Linear Algebra, Calculus								
<b>Course Objectives (CO):</b>			<b>The objectives of Fundamentals of Deep Learning Laboratory are:</b>					
			<ol style="list-style-type: none"> <li>1. Enable students to build and train neural network architectures (perceptrons, MLPs, CNNs, RNNs) from scratch and via deep-learning frameworks (TensorFlow/PyTorch).</li> <li>2. Familiarize students with optimization algorithms (SGD, Adam, etc.) and regularization methods (dropout, batch-norm) to improve convergence and generalization.</li> <li>3. Guide students through designing and evaluating autoencoders, VAEs, and GANs for unsupervised representation learning and sample generation.</li> <li>4. Develop skills to visualize training dynamics, loss landscapes, feature maps, and latent spaces to diagnose model behavior.</li> <li>5. Teach students how to fine-tune pretrained networks for new tasks and package trained models into simple APIs (Flask, TensorFlow Lite) for real-world use.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Implement and train basic neural network architectures from scratch.</li> <li>2. Apply convolutional and recurrent models to vision and sequence tasks.</li> <li>3. Use regularization and optimization techniques (batch norm, dropout, advanced optimizers) to improve model performance.</li> <li>4. Build and evaluate generative models and autoencoders.</li> <li>5. Deploy and serve trained deep learning models in simple applications.</li> </ol>					

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Perceptron and MLP from Scratch	1	Use Implement a single-layer perceptron and a 2-layer MLP using NumPy and Train on a toy dataset and visualize decision boundaries visualizations	CLO1	2
2	Backpropagation and Optimization	2	Code forward/backward passes for MLP and Experiment with SGD, Momentum, and Adam optimizers on MNIST	CLO1	2
3	Activation Functions and Loss Landscapes	3	Compare Sigmoid, Tanh, ReLU, Leaky ReLU in training speed/convergence and Visualize loss surfaces for different activations	CLO1	2
4	Convolutional Neural Networks (CNNs)	4	Build a small CNN (conv → pool → FC) in PyTorch or TensorFlow Train and evaluate on CIFAR-10; plot training/validation curves	CLO2	2

5	Regularization: Dropout and Batch Normalization	5	Integrate Dropout and BatchNorm layers into your CNN Analyze their effects on overfitting and convergence	CLO2	2
6	Recurrent Neural Networks (RNNs) and LSTM	6	Implement a simple RNN for character-level language modelling Extend to LSTM and compare performance on a text corpus	CLO2	2
7	Autoencoders for Dimensionality Reduction	7	Build a basic under complete autoencoder for MNIST Visualize latent space representations	CLO3	2
8	Variational Autoencoders (VAE)	8	Implement encoder/decoder with reparameterization trick Generate new samples and inspect the learned latent manifold	CLO4	2
9	Generative Adversarial Networks (GANs)	9, 10	Code a DCGAN architecture to generate handwritten digits Track generator/discriminator losses and sample quality over epochs	CLO4	4
10	Transfer Learning and Deployment	11, 12, 13, 14, 15	Fine-tune a pretrained model (e.g., VGG16/ResNet50) on a small custom dataset Export the trained model and deploy via a simple Flask or TensorFlow Lite API	1, 2, 3, 4, 5	10

<b>Name of the Program:</b>		<b>BTECH CSE</b>		<b>Semester: 7</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Big Data and Buisness Analytics</b>		<b>Course Code/ Course Type</b>		<b>UBTCEPE402/PEC</b>	
<b>Course Pattern:</b>		<b>2025</b>		<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>				<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>

Pre-Requisite:

1. Database Management Systems, Programming in Python/Java, Basics of Data Analysis

<b>Course Objectives (CO):</b>	<p><b>The objectives of Big Data and Business Analytics are:</b></p> <ol style="list-style-type: none"> <li>1. Understand the fundamentals of Big Data, its characteristics, ecosystem, and applications in various sectors.</li> <li>2. Explore Big Data processing technologies, Hadoop architecture, and NoSQL databases for effective data management.</li> <li>3. Apply MapReduce programming and Big Data tools like Spark, Kafka, and Cassandra for large-scale data processing.</li> <li>4. Learn data warehousing concepts, including architecture, schema design, and their role in business intelligence.</li> <li>5. Analyze OLAP operations and implement decision support mechanisms using data cubes and query processing techniques.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Describe Big Data concepts, types, and applications, and explain the need for analytics in business decision making.</li> <li>2. Demonstrate the use of Hadoop ecosystem components and NoSQL databases for Big Data storage and processing.</li> <li>3. Write basic MapReduce programs and utilize Spark and other Big Data tools for data analysis tasks.</li> <li>4. Explain the architecture and schema designs of data warehouses and their significance in decision support systems.</li> <li>5. Perform OLAP operations and apply data cube querying techniques for business analytics and decision support.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Big Data Analytics :</b> Overview of Big Data: Characteristics (Volume, Velocity, Variety, Veracity, Value), Need for Big Data Analytics in Decision Making, Types of Data: Structured, Semi-structured, Unstructured, Big Data Ecosystem and Architecture Overview, Applications of Big Data in Various Sectors: Finance, Healthcare, E-commerce, IoT	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Big Data Technologies and Hadoop Ecosystem</b> Hadoop Architecture: HDFS, MapReduce, Hadoop Components: NameNode, DataNode, JobTracker, TaskTracker, YARN: Resource Management, Hadoop Ecosystem: Pig, Hive, HBase, Sqoop, Flume, Introduction to NoSQL Databases (MongoDB, Cassandra)	<b>CLO 2</b>	<b>9</b>

<b>UNIT III</b>		
<b>MapReduce and Big Data Tools :</b> MapReduce Programming Model: Mapper, Reducer, Combiner, Partitioner, Writing Simple MapReduce Programs using Java, Word Count Example and Case Studies in MapReduce, Introduction to Spark: RDDs, DataFrames, Spark vs. Hadoop MapReduce, Basics of Big Data Analytics Tools: Apache Spark, Kafka, Cassandra	<b>CLO 3</b>	<b>9</b>
<b>UNIT IV</b>		
<b>Data Warehousing Concepts for Business Intelligence :</b> Introduction to Data Warehousing and Business Intelligence, Data Warehouse Architecture: Data Source, Staging Area, ETL, Data Marts, OLAP, Star Schema and Snowflake Schema Design, Role of Data Warehousing in Decision Support Systems (DSS)	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
<b>OLAP Operations and Decision Support in Data Warehousing :</b> OLAP Types: MOLAP (Multidimensional OLAP), ROLAP (Relational OLAP), HOLAP (Hybrid OLAP), OLAP Operations: Roll-up, Drill-down, Slice, Dice, Pivot (Rotate), Construction and Querying of Data Cubes, Query Processing and Performance Optimization in OLAP Systems, Role of OLAP in Strategic and Tactical Decision Support, Case Studies: Decision Making using OLAP Queries in Retail, Finance, Healthcare	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

-	1	-	1	2	25	-	25	
Pre-Requisite:								
1. Database Systems, Programming (Python/Java), Basics of Data Analytics								
<b>Course Objectives (CO):</b>			<b>The objectives of Big Data and Business Analytics Laboratory are:</b>					
			<ol style="list-style-type: none"> <li>1. Provide hands-on experience with core Big Data frameworks (Hadoop, Spark).(TensorFlow/PyTorch).</li> <li>2. Teach students to ingest, process, and store large-scale datasets.</li> <li>3. Introduce business analytics workflows using BI tools.</li> <li>4. Develop skills in both batch and real-time data processing.</li> <li>5. Enable end-to-end analytics: from raw data to interactive dashboards.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Store and manage large datasets using HDFS and HBase.</li> <li>2. Develop and run MapReduce and Pig jobs for batch analytics.</li> <li>3. Query and transform data with HiveQL and Spark SQL.</li> <li>4. Implement real-time streaming pipelines and ML models with Spark.</li> <li>5. Design and deploy interactive BI dashboards to drive business insights.</li> </ol>					

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	HDFS Fundamentals	1	Install/configure Hadoop locally or via Docker, Perform file operations (put, get, ls, rm) on HDFS	CLO1	2
2	MapReduce Programming	2	Write a WordCount job in Java or Python Run it on a sample text corpus and interpret counters	CLO1	2
3	Pig Latin Scripting	3	Load and preprocess a log-file dataset Use Pig for grouping, filtering, and joining	CLO1	2
4	Hive Data Warehousing	4	Create external/internal tables over CSV/JSON data Run HiveQL queries, partitions, and UDFs	CLO2	2
5	HBase NoSQL Operations	5	Set up HBase shell Perform CRUD on column-family data, design row-key schema	CLO2	2
6	Spark RDD API	6	Develop basic RDD transformations (map, filter, reduceByKey) – Execute a WordCount and persist results	CLO2	2
7	Spark DataFrame and SQL	7	Read Parquet/JSON into DataFrames Run Spark SQL queries and compare performance vs. RDDs	CLO3	2

8	Spark Streaming	8	Ingest live data via socket or Kafka Windowed counts and real-time alerts	CLO4	2
9	Spark MLlib Analytics	9,10	Build a classification/regression model (e.g., logistic regression) Train/test on a large dataset and evaluate with MLlib metrics	CLO4	4
10	Business Intelligence Dashboard	11,12,13,14,15	Connect Power BI or Tableau to processed data (Hive/Spark) Create interactive visualizations and drill-downs	1, 2, 3, 4, 5	10

### Learning Resources:

Pre-Requisite:								
<ol style="list-style-type: none"> <li>1. Basic knowledge of Excel and spreadsheets</li> <li>2. Familiarity with data visualization concepts</li> <li>3. Understanding of databases or SQL is helpful but not mandatory</li> </ol>								
<b>Course Objectives (CO):</b>			<b>The objectives of Microsoft PowerBI Data Analyst are:</b>					
			<ol style="list-style-type: none"> <li>1. Understand the fundamentals of Business Intelligence (BI) and the role of Power BI in data analytics.</li> <li>2. Learn how to connect, transform, and model data using Power BI tools.</li> <li>3. Create interactive visualizations and dashboards to communicate insights effectively.</li> <li>4. Implement DAX (Data Analysis Expressions) for complex calculations and KPIs effectively.</li> <li>5. Apply Power BI service features for collaboration, sharing, and automated data refreshes.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Prepare and clean data from various sources for Power BI analysis.</li> <li>2. Develop and manage robust data models using Power BI Desktop.</li> <li>3. Create compelling reports, dashboards, and visuals tailored to business needs.</li> <li>4. Use DAX to write calculated columns, measures, and advanced analytical functions.</li> <li>5. Publish, share, and automate Power BI reports using Power BI Service and the Power Platform.</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Power BI and Business Intelligence</b> What is Business Intelligence (BI)?,Power BI ecosystem: Desktop, Service, Mobile, Importing and connecting data sources (Excel, SQL, web),Data load, Power Query interface	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Data Preparation and Transformation</b> Power Query Editor basics, Cleaning and shaping data (merge, append, pivot, unpivot), Data types and error handling, Data profiling and transformations	<b>CLO 2</b>	<b>6</b>

<b>UNIT III</b>		
<b>Data Modeling and DAX</b> Star schema and data relationships, Calculated columns and measures, Aggregations, filters, time intelligence, Advanced DAX functions: CALCULATE, RELATED, FILTER	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>Visualization and Reporting</b> Creating interactive visuals: tables, charts, slicers, maps, Report themes and formatting, Drill-through, bookmarks, and custom visuals, KPI indicators and conditional formatting	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Power BI Service, Deployment, and Best Practices</b> Publishing reports to Power BI Service, Workspaces, dashboards, and sharing, Row-level security (RLS) and access control, Refresh scheduling and usage monitoring, Power BI integration with Excel, Teams, and Power Platform	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

### Learning Resources:

#### Text Books:

1. "Mastering Microsoft Power BI" by Brett Powel

#### Reference Books:

1. "The Definitive Guide to DAX" by Alberto Ferrari and Marco Russo
2. "Pro Power BI Desktop" by Adam Aspin
3. "Analyzing Data with Power BI and Power Pivot for Excel" by Alberto Ferrari and Marco Russo

#### Online Resources/E-learning Resources:

1. Power BI Data Analyst Professional Certificate – Coursera
2. Microsoft Learn – Power BI

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 7</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Software Testing and AI Automation</b>			<b>Course Code/ Course Type</b>		<b>MOOCCE702</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
-	-	<b>2</b>	<b>2</b>	<b>2</b>	<b>25</b>	<b>25</b>	<b>-</b>	

Pre-Requisite:

1. Knowledge of Python programming
2. Understanding of Software Development Life Cycle (SDLC)
3. Basic familiarity with machine learning concepts and version control systems (e.g., Git)

<b>Course Objectives (CO):</b>	<p><b>The objectives of Software Testing and AI Automation are:</b></p> <ol style="list-style-type: none"> <li>1. Understand the principles, techniques, and practices of manual and automated software testing.</li> <li>2. Build and manage automated test suites using tools such as Selenium and PyTest.</li> <li>3. Integrate test automation into DevOps pipelines using CI/CD tools.</li> <li>4. Apply AI and machine learning techniques for intelligent test optimization and defect prediction.</li> <li>5. Explore the use of generative AI to enhance software testing efficiency and create self-healing test frameworks.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Analyze software requirements and design test strategies and cases.</li> <li>2. Implement Python-based test automation for web and functional testing.</li> <li>3. Use AI algorithms to prioritize test cases, predict bugs, and generate tests from requirements.</li> <li>4. Automate testing in a CI/CD pipeline with tools like Jenkins and GitHub Actions</li> <li>5. Integrate generative AI tools (e.g., Copilot, ChatGPT) for smart test script generation and maintenance</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Software Testing Fundamentals</b> Types of software testing: unit, integration, system, acceptance, Test case development and execution, Defect management and lifecycle, Software quality assurance metrics	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Python-Based Test Automation</b> Introduction to test automation frameworks, Selenium, WebDriver for web automation ,Writing test scripts using Python and PyTest, Assertions, fixtures, and reporting in PyTest	<b>CLO 2</b>	<b>6</b>

<b>UNIT III</b>		
<b>Continuous Testing in DevOps</b> CI/CD principles and integration with Jenkins/GitHub Actions, Running tests in pipelines and containers, Test orchestration and test data management.	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		
<b>AI in Software Testing</b> Overview of AI-driven testing tools, ML for defect prediction and code coverage, AI-based test case generation and prioritization, Natural Language Processing (NLP) for requirements parsing.	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Generative AI for Testing and Development</b> Introduction to generative AI for software engineering, Using GitHub Copilot and ChatGPT for writing and debugging tests, Self-healing scripts and intelligent code suggestions, Future trends: autonomous testing, test bots	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

### Learning Resources:

#### Text Books:

1. "Software Testing: Principles and Practices" by Srinivasan Desikan Gopaldaswamy Ramesh

#### Reference Books:

1. "Foundations of Software Testing" by Dorothy Graham, Rex Black, and Erik van Veenendaal
2. "Python Testing with Pytest" by Brian Okken
3. "AI for Testing" by Tariq King and Jason Arbon

#### Online Resources/E-learning Resources:

1. Software Testing and Automation Specialization – Coursera
2. Generative AI for Software Developers – Coursera

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 5</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Project Phase I</b>			<b>Course Code/ Course Type</b>		<b>UBTCE405</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
-	2	-	2	4	20	-	30	
Pre-Requisite:								
<ol style="list-style-type: none"> <li>1. Basics of Software Engineering and Computer Programming Concepts</li> <li>2. Basics of Programming Language such as C, MATLAB, Python</li> </ol>								
<b>Course Objectives (CO):</b>			<b>The objectives of Project Phase I are:</b>					
			<ol style="list-style-type: none"> <li>1. To comprehend the Product Development Process</li> <li>2. To plan for various activities of the major project and channelize the work towards product development</li> <li>3. To build, design and implement real-time applications using available platforms.</li> <li>4. To inculcate research culture in students for their technical growth</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Understand the principles and building blocks of deep neural networks Comprehend, plan, and execute the major project with appreciable research outcomes.</li> <li>2. Design real-time applications considering emerging areas in technology</li> <li>3. Prepare good quality technical reports based on the project</li> <li>4. Demonstrate technical ideas and their relevance to current technology</li> <li>5. Publish good quality papers in reputed journals and present their work in reputed conferences.</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<ol style="list-style-type: none"> <li>1. Individual students must identify a real-time problem and develop an innovative solution under the guidance of a project mentor</li> <li>2. Sponsored projects or project internships from reputed companies/ institutions are encouraged</li> <li>3. Projects must be based on current technologies or research areas and should demonstrate societal or industrial relevance</li> <li>4. Students should submit a detailed Project Report-I as part of term work, covering design methodology, implementation plans, and expected outcomes.</li> <li>5. Students must aim for minimum 2 publications (preferably Scopusindexed) as part of the research output from the project work</li> <li>6. Evaluation will include proposal presentation, mid-evaluation, documentation review, and final demo.</li> </ol>	<b>CLO 1-5</b>	<b>30</b>
<b>Total Hours</b>		<b>30</b>

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 8</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>DevOps</b>			<b>Course Code/ Course Type</b>		<b>UBTCE406/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>

<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	

Pre-Requisite:

1. Python Programming, Probability and Statistics, Linear Algebra, Machine Learning, Deep Learning Basics

<b>Course Objectives (CO):</b>	<p><b>The objectives of DevOps are:</b></p> <ol style="list-style-type: none"> <li>1. Understand the core concepts of DevOps, its relationship with Agile, CI/CD, and Linux essentials required for DevOps practices.</li> <li>2. Apply version control practices using Git for efficient collaboration and project management in DevOps workflows.</li> <li>3. Implement configuration management using Chef to automate infrastructure deployment and manage environments.</li> <li>4. Explore containerization concepts and manage container-based applications using Docker.</li> <li>5. Automate build processes using Maven for managing project dependencies, builds, and deployments.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Describe DevOps principles, CI/CD concepts, and Linux commands essential for DevOps environments.</li> <li>2. Demonstrate Git operations including repository management, branching, merging, and version control strategies.</li> <li>3. Configure infrastructure using Chef, manage nodes, roles, environments, and handle data bags for configuration management.</li> <li>4. Create and manage Docker containers, custom images, and apply networking concepts for container orchestration.</li> <li>5. Build, manage, and automate software projects using Maven with effective dependency and plugin management.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to DevOps and Linux Essentials :</b> Define DevOps and its importance, DevOps history, goals, stakeholders, and key terminology, DevOps perspective and relationship with Agile, Lean, ITIL, SDLC models, DevOps tools overview and configuration management basics, Continuous Integration and Continuous Deployment (CI/CD) concepts, Introduction to Linux OS and its importance in DevOps, Basic Linux commands, Linux administration, environment variables, networking concepts, Linux server installation, RPM, and YUM package management	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Version Control using Git :</b> Introduction to Version Control Systems: CVCS vs. DVCS, History, basics, and significance of Git, Git installation and initial setup on Linux and Windows, Core Git operations: repository creation, cloning, committing, fetching, pulling, re-motes, Branching operations: creating, switching, merging branches	<b>CLO 2</b>	<b>9</b>

UNIT III		
<b>Configuration Management with Chef :</b> Overview of Chef and common Chef terminology (server, workstation, client, repository), Chef architecture and configuration concepts, Workstation setup, knife configuration, organization setup, Adding nodes and testing node setup using knife, Working with node objects, search, run lists, and environments, Managing roles, attributes, and creating custom attributes in cookbooks, Introduction to data bags: creation, management using CLI and Chef Console, sample data bags for user creation	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Containerization with Docker :</b> Introduction to Docker: concept, use cases, Docker vs. virtualization, Docker architecture and key components overview, Installing Docker on Linux and Windows platforms, Working with Docker Hub: downloading/uploading images, understanding containers, Running containers, executing commands, managing multiple containers, Creating and managing custom Docker images, Docker networking: container linking, exposing ports, container routing	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Build Automation using Maven :</b> Introduction to Maven as a build tool, Maven installation and build requirements, Understanding Maven Project Object Model (POM) and builds (pom.xml), Maven build lifecycle: phases, goals, and structure, Maven repositories: local (.m2), global, and remote repositories, Understanding Group ID, Artifact ID, and Snapshot concepts, Managing dependencies and plugins in Maven builds	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. DevOps for Developers, Michael Hüttermann, ISBN: 978-1-4302-4569-8, Apress Berkeley, CA
2. DevOps: A Software Architect's Perspective, Len Bass, Ingo M. Weber, Liming Zhu, ISBN: 9780134049847, Addison-Wesley

### Reference Books:

1. Building a DevOps Culture: Jennifer Davis, Katherine Daniels. Publisher: O'Reilly
2. DevOps for Dummies: Gene Kim, Kevin Behr, George, Publisher: John Wiley & Sons

### Online Resources/E-learning Resources:

1. Coursera: <https://www.coursera.org/learn/intro-to-devops>
2. Coursera: <https://www.coursera.org/specializations/packt-devops-complete-course>

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 8</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>DevOps Laboratory</b>			<b>Course Code/ Course Type</b>		<b>UBTCE407/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
-	1	-	1	2	25	-	25	
Pre-Requisite:								
1. Basic Programming Skills (Python), Linear Algebra, Basic Machine Learning Concepts								
<b>Course Objectives (CO):</b>			<b>The objectives of DevOps Laboratory are:</b>					
			<ol style="list-style-type: none"> <li>1. Understand DevOps principles, Linux essentials, and the role of CI/CD in software development.</li> <li>2. Apply version control techniques using Git for collaborative software development.</li> <li>3. Implement configuration management and infrastructure automation using Chef.</li> <li>4. Manage containerization of applications using Docker for consistent development and deployment environments.</li> <li>5. Automate project builds and dependency management using Maven in DevOps workflows.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Execute Linux commands, manage environments, and handle software installations essential for DevOps practices.</li> <li>2. Perform version control operations, branching, and merging using Git.</li> <li>3. Configure Chef workstation, manage nodes, run lists, and roles for infrastructure automation.</li> <li>4. Use Docker to run, manage containers, and create custom Docker images for application deployment.</li> <li>5. Automate software project builds and manage dependencies using Maven effectively.</li> </ol>					

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Linux Commands Practice	1	Execute basic Linux commands: directory creation, file manipulation, permissions, environment variables.	CLO 1	2
2	Package Installation	2	Install software packages using RPM and YUM package managers on Linux.	CLO 1	2
3	Git Repository Setup	3	Initialize a Git repository, clone, commit, push, and pull operations.	CLO 2	2
4	Git Branching and Merging	4	Create branches, switch between branches, and merge branches using Git.	CLO 2	2
5	Chef Workstation Setup	5	Configure Chef Workstation, knife setup, and connect it to the Chef server.	CLO 3	2
6	Manage Nodes and Roles	6, 7	Add nodes, define run lists, create roles, and assign roles to nodes.	CLO 3	4

7	Docker Image Pulling	8, 9	Pull Docker images from Docker Hub and run containers from these images.	CLO 4	4
8	Custom Docker Image	10, 11	Build a custom Docker image and run a container from the created image.	CLO4	4
9	Maven Project Build	12, 13	Create a Maven project, compile, and run using Maven build lifecycle commands.	CLO 5	4
10	Maven Dependency Management	14, 15	Add dependencies to the Maven POM file and manage project builds effectively.	CLO 5	4

Pre-Requisite:								
1. Critical Thinking and Analytical Skills								
<b>Course Objectives (CO):</b>			<b>The objectives of Research Methodology &amp; IPR are:</b>					
			<ol style="list-style-type: none"> <li>1. Learn research fundamentals to develop solid understanding of research ethics.</li> <li>2. Learn various research designs and methodologies, including experimental, survey, and case study designs.</li> <li>3. Enhance written and oral communication skills for presenting research proposals, findings, and conclusions.</li> <li>4. Develop a comprehensive understanding of intellectual property rights, including patents, copyrights, trademarks, and trade secrets.</li> <li>5. Gain knowledge of national and international laws and regulations governing intellectual property rights.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Demonstrate research problems and gain research ethics.</li> <li>2. Use various research designs.</li> <li>3. Explore the presentation skills in research proposals and writings.</li> <li>4. Use the tools filing the patents and IPR.</li> <li>5. Apply the different laws and regulations for IP rights.</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Research Methodology :</b> Understanding research, types of research, and the scientific method. Research ethics and integrity. <b>Problem Formulation and Literature Review :</b> Identifying research problems. Reviewing existing literature and formulating research questions.	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>Research Design :</b> Experimental design. Survey design. Case study design. Qualitative and quantitative research methods. <b>Data Collection and Analysis :</b> Methods of data collection (surveys, interviews, experiments, etc.). Data analysis techniques (qualitative and quantitative).	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>Writing and Presenting Research :</b> Research proposal writing. Academic writing style and citation. Presenting research findings: oral presentations and posters. Research Project Management : Time management. Resource allocation. Risk assessment and mitigation. Research ethics, plagiarism, and use of tools.	<b>CLO 3</b>	<b>6</b>

UNIT IV		
<b>Introduction to Intellectual Property :</b> Overview of intellectual property rights (patents, copyrights, trademarks, trade secrets). Importance of IPR in the context of technology and innovation. Patents : Basics of patent law and patentability criteria. Patent filing procedure. Patent searching and analysis.	<b>CLO 4</b>	<b>6</b>
UNIT V		
<b>IPR Issues in Research and Development :</b> IP management strategies for research institutions and companies. IP licensing and technology transfer. International IPR Laws and Treaties : Overview of international treaties like TRIPS Agreement. Comparison of IPR laws across different jurisdictions.	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

### Learning Resources:

#### Text Books:

1. Research Methodology: Methods and Techniques by C.R. Kothari
2. Research Methodology: A Step-by-Step Guide for Beginners by Ranjit Kumar
3. Intellectual Property Rights: Text and Cases” by V.K. Ahuja

#### Reference Books:

1. Research Design: Qualitative, Quantitative, and Mixed Methods Approaches” by John W. Creswell and J. David Creswell
2. Intellectual Property: Patents, Trademarks, and Copyrights by Richard Stim

<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	

Pre-Requisite:

1. Probability and Statistics, Linear Algebra, Machine Learning, Deep Learning (Basics)

<b>Course Objectives (CO):</b>	<p><b>The objectives of Generative models and applications are:</b></p> <ol style="list-style-type: none"> <li>1. Understand the theoretical foundations of generative modeling.</li> <li>2. Learn popular generative model architectures and how they are trained.</li> <li>3. Explore applications of generative models in vision, text, audio, and other domains.</li> <li>4. Develop hands-on skills in implementing and evaluating generative models.</li> <li>5. Analyze challenges like training instability, evaluation, and ethical implications.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Understand and compare different types of generative models and their mathematical foundations.</li> <li>2. Implement and train basic VAE and GAN architectures using deep learning frameworks.</li> <li>3. Analyze the strengths, weaknesses, and evaluation metrics of generative models.</li> <li>4. Apply generative models to real-world problems in image, text, and audio domains.</li> <li>5. Demonstrate awareness of ethical, social, and legal issues associated with generative AI.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Generative Modeling</b> Discriminative vs Generative Models, Applications of Generative Models: Image Synthesis, Text Generation, Anomaly Detection, Probability Distributions: Joint, Marginal, Conditional, Maximum Likelihood Estimation (MLE) and KL Divergence, Latent Variable Models	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Variational Autoencoders (VAEs)</b> Introduction to Autoencoders and Limitations, Probabilistic Encoders and Decoders, Variational Inference and ELBO, Reparameterization Trick, Conditional VAEs (CVAE), Applications: Denoising, Semi-supervised Learning	<b>CLO 2</b>	<b>9</b>

UNIT III		
<b>Generative Adversarial Networks (GANs)</b> GAN Architecture: Generator and Discriminator, Game-Theoretic Perspective, Nash Equilibrium, Loss Functions (JS divergence, Wasserstein distance), Training Challenges: Mode Collapse, Non-convergence, Variants: DCGAN, WGAN, Conditional GANs, StyleGAN, Applications: Image Generation, Super Resolution, Deepfakes	<b>CLO 3</b>	<b>9</b>
UNIT IV		
<b>Diffusion Models and Autoregressive Models</b> Motivation and Mathematical Foundations of Diffusion Models, Denoising Diffusion Probabilistic Models (DDPMs), Sampling and Training Techniques, Autoregressive Models: PixelRNN, PixelCNN, WaveNet, Transformer-based Generative Models: GPT, BERT (overview)	<b>CLO 4</b>	<b>9</b>
UNIT V		
<b>Applications and Ethics of Generative AI</b> Applications in Art, Music, Text, Healthcare, and Simulation, Evaluation Metrics: Inception Score, FID, BLEU, Perceptual Metrics, Human-AI Collaboration, Risks: Deepfakes, Bias Amplification, Misinformation, Responsible AI: Fairness, Explainability, Regulation	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Ian Goodfellow, Yoshua Bengio, and Aaron Courville, Deep Learning, MIT Press, 2016.
2. David Foster, Generative Deep Learning: Teaching Machines to Paint, Write, Compose, and Play, 2nd Edition, O'Reilly Media, 2022.

### Reference Books:

1. Mehdi Mirza and Simon Osindero, Conditional Generative Adversarial Nets, arXiv preprint (2014).
2. Jakub Tomczak & Max Welling, Introductory Guide to Variational Autoencoders (available online)
3. Ho et al., Denoising Diffusion Probabilistic Models, NeurIPS 2020.

### Online Resources/E-learning Resources:

1. Coursera - GANs Specialization (DeepLearning.AI)
2. Stanford CS236: Deep Generative Models

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 8</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Generative Models and Applications Laboratory</b>			<b>Course Code/ Course Type</b>		<b>UBTCEPE407/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
-	1	-	1	2	25	-	25	

Pre-Requisite:

1. Basic Programming Skills (Python), Linear Algebra, Basic Machine Learning Concepts

<b>Course Objectives (CO):</b>	<p><b>The objectives of Generative Models and Applications Laboratory are:</b></p> <ol style="list-style-type: none"> <li>1. To introduce students to the foundational concepts of generative modeling.</li> <li>2. To enable hands-on experience with popular generative models like VAEs, GANs, and diffusion models.</li> <li>3. To develop practical skills in generating synthetic data using deep learning frameworks.</li> <li>4. To explore real-world applications of generative models in domains like image synthesis, text generation, and anomaly detection.</li> <li>5. To familiarize students with ethical considerations and limitations in generative AI.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Understand and implement basic generative modeling techniques.</li> <li>2. Build and train different types of Generative Adversarial Networks (GANs).</li> <li>3. Apply generative models to solve real-world problems in vision, NLP, and signal processing.</li> <li>4. Evaluate and fine-tune generative models for improved outputs.</li> <li>5. Demonstrate ethical use of generative technologies with awareness of societal impact.</li> </ol>

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Introduction to Autoencoders	1	Build a simple autoencoder to reconstruct MNIST images.	CLO 1	2
2	Variational Autoencoder (VAE)	2	Implement and visualize a VAE using the Fashion-MNIST dataset.	CLO 1	2
3	Introduction to GANs	3	Build a basic GAN for generating handwritten digits (MNIST).	CLO 2	2
4	DCGAN – Deep Convolutional GAN	4	Generate more realistic images using convolutional layers with the CIFAR-10 dataset.	CLO 2	2
5	Conditional GANs (cGANs)	5	Generate class-conditional images based on input labels.	CLO 3	2

6	CycleGAN for Image to Image Translation	6, 7	Convert images from one domain to another (e.g., horses $\rightarrow$ zebras).	CLO 3	4
7	Text Generation using GPT-style Models	8, 9	Generate synthetic text using a pre-trained GPT-2 or fine-tuned LLM.	CLO 4	4
8	Image Caption Generation	10, 11	Generate captions from images using a CNN-RNN pipeline.	CLO 4	2
9	Anomaly Detection using Autoencoders	12, 13	Detect outliers in tabular or image data using reconstruction error.	CLO 5	4
10	Exploring Diffusion Models	14, 15	Understand and use pretrained diffusion models like Stable Diffusion to generate high-quality images.	CLO 5	4

### Learning Resources:

#### Text Books:

1. "Deep Learning" by Ian Goodfellow, Yoshua Bengio, and Aaron Courville – MIT Press
2. "Probabilistic Deep Learning" by Oliver Duerr, Beate Sick, Elvis Murina – O'Reilly

#### Reference Books:

1. "Generative Deep Learning" by David Foster – O'Reilly Media
2. "GANs in Action" by Jakub Langr and Vladimir Bok – Manning
3. "Python Machine Learning" by Sebastian Raschka and Vahid Mirjalili – Packt

#### Online Resources/E-learning Resources:

1. DeepLearning.AI - Generative AI Short Courses: <https://www.deeplearning.ai/>
2. Fast.ai Deep Learning Course: <https://course.fast.ai/>

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 8</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Natural Language Processing and LLM</b>			<b>Course Code/ Course Type</b>		<b>UBTCEPE406/PEC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>40</b>	<b>60</b>	<b>-</b>	
Pre-Requisite:								
1. Python Programming, Probability and Statistics, Linear Algebra, Machine Learning, Deep Learning Basics								
<b>Course Objectives (CO):</b>			<b>The objectives of Natural Language Processing and LLM are:</b>					
			<ol style="list-style-type: none"> <li>1. Understand fundamental concepts in NLP including text preprocessing, syntax, semantics, and discourse.</li> <li>2. Explore statistical, neural, and transformer-based approaches to language modeling.</li> <li>3. Gain hands-on experience with modern NLP tools and LLM frameworks.</li> <li>4. Apply LLMs to solve real-world problems such as summarization, translation, and Q and A.</li> <li>5. Discuss challenges and ethical concerns of deploying LLMs.</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Understand the foundational principles and techniques used in Natural Language Processing.</li> <li>2. Apply statistical and deep learning models for NLP tasks like classification, translation, and summarization.</li> <li>3. Implement and fine-tune LLMs for various real-world NLP applications.</li> <li>4. Analyze the performance and limitations of transformer-based architectures.</li> <li>5. Evaluate ethical and societal implications of deploying LLMs in real-world systems.</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Natural Language Processing</b> Components of NLP: Syntax, Semantics, Pragmatics, Text Preprocessing: Tokenization, Lemmatization, POS Tagging, Stopword Removal, Language Modeling: N-gram Models, Smoothing, Word Embeddings: Word2Vec, GloVe, FastText, Evaluation Metrics: BLEU, ROUGE, Perplexity	<b>CLO 1</b>	<b>9</b>
<b>UNIT II</b>		
<b>Traditional NLP and Classical Models</b> Text Classification and Sentiment Analysis using Naive Bayes, SVM, Named Entity Recognition (NER), POS Tagging using CRFs and HMMs, Topic Modeling: LDA and Latent Semantic Analysis, Information Retrieval: TF-IDF, BM25, Machine Translation: Phrase-based SMT	<b>CLO 2</b>	<b>9</b>
<b>UNIT III</b>		
<b>Deep Learning for NLP</b> Neural Language Models: RNNs, GRUs, LSTMs, Sequence-to-Sequence Models with Attention, Bidirectional Language Modeling, Applications: Text Summarization, Chatbots, Text Generation, Introduction to Transfer Learning in NLP	<b>CLO 3</b>	<b>9</b>
<b>UNIT IV</b>		

<b>Transformers and Large Language Models</b> Transformer Architecture: Self-Attention, Multi-Head Attention, Positional Encoding, Pretrained LLMs: BERT, GPT, RoBERTa, T5, XLNet, Fine-tuning and Prompt Engineering, Evaluation of LLMs: Zero-shot, Few-shot, In-context Learning, Hands-on with Hugging Face Transformers	<b>CLO 4</b>	<b>9</b>
<b>UNIT V</b>		
<b>Applications and Responsible Use of LLMs</b> Applications: Conversational Agents, Code Generation, Document QA, Auto-Summarization, LLMs in Production: API Integration, Performance, Optimization, Limitations of LLMs: Hallucination, Bias, Data Leakage, Ethics in NLP: Fairness, Explainability, Data Privacy, Trends: Open-Source LLMs (LLaMA, Mistral, Falcon, Gemma), Multilingual LLMs	<b>CLO 5</b>	<b>9</b>
<b>Total Hours</b>		<b>45</b>

## Learning Resources:

### Text Books:

1. Dan Jurafsky & James H. Martin, Speech and Language Processing, 3rd Edition Draft, 2023 (Available online)
2. Delip Rao & Brian McMahan, Natural Language Processing with PyTorch, O'Reilly, 2019

### Reference Books:

1. Jacob Eisenstein, Introduction to Natural Language Processing, MIT Press, 2019
2. Andriy Burkov, Machine Learning Engineering for Production (MLOps), TrueShelf, 2021 (for deploying LLMs)
3. Kevin Lacker, Language Models are Few-Shot Learners (GPT-3 Paper)

### Online Resources/E-learning Resources:

1. Natural Language Processing with Classification and Vector Spaces – Coursera (DeepLearning.AI)
2. Hugging Face Course – Transformers and NLP

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 8</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Natural Language Processing and LLM Laboratory</b>			<b>Course Code/ Course Type</b>		<b>UBTCEPE408/PCC</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.3</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment )</b>	<b>Practical/ Oral</b>	
-	1	-	1	2	25	-	25	

Pre-Requisite:

1. Basic Programming Skills (Python), Linear Algebra, Basic Machine Learning Concepts

<b>Course Objectives (CO):</b>	<p><b>The objectives of Natural Language Processing and LLM Laboratory are:</b></p> <ol style="list-style-type: none"> <li>1. To introduce students to the foundational techniques of Natural Language Processing (NLP) and Large Language Models (LLM).</li> <li>2. To provide hands-on experience with text processing, sentiment analysis, and modern NLP architectures like transformers.</li> <li>3. To develop practical skills in using state-of-the-art models such as GPT-2, GPT-3, and BERT for text generation, classification, and summarization.</li> <li>4. To explore the applications of NLP and LLMs in real-world problems like chatbots, information retrieval, and machine translation.</li> <li>5. To emphasize the ethical implications of using NLP models and their limitations in practice.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Implement basic text processing techniques, such as tokenization, POS tagging, and Named Entity Recognition (NER).</li> <li>2. Build NLP pipelines using popular libraries such as spaCy, NLTK, and Hugging Face Transformers.</li> <li>3. Understand and apply transformer-based architectures like BERT, GPT, and T5 to solve various NLP tasks.</li> <li>4. Create language models and fine-tune them for tasks like text classification, translation, and summarization.</li> <li>5. Evaluate the performance of NLP models and address ethical concerns related to NLP and LLMs.</li> </ol>

### Practical Plan:

<b>Practical Number</b>	<b>Practical Title</b>	<b>Week Number</b>	<b>Details</b>	<b>CLO</b>	<b>Hours</b>
1	Text Preprocessing and Tokenization	1, 2	Implement text preprocessing steps (removal of stop words, stemming, lemmatization) using libraries like NLTK and spaCy.	CLO 1	4
2	Part-of-Speech (POS) Tagging and Named Entity Recognition (NER)	3	Use spaCy to perform POS tagging and NER on sample text data (e.g., news articles).	CLO 1	2
3	Word Embeddings (Word2Vec / GloVe)	4	Train and visualize word embeddings using Gensim's Word2Vec and GloVe embeddings.	CLO 2	2

4	Sentiment Analysis	5	Build a sentiment analysis model using Naive Bayes or deep learning techniques (LSTM or BERT) on movie reviews or Twitter data.	CLO2	2
5	Text Classification with Traditional Machine Learning	6, 7	Apply text classification techniques using TF-IDF and Naive Bayes or SVM classifiers on a labeled text dataset.	CLO3	4
6	Introduction to Transformer Networks	8, 9	Understand and implement the basic transformer architecture (like BERT) for text classification tasks.	CLO 3	4
7	Text Generation using GPT-2	10	Use Hugging Face Transformers to generate text using a pretrained GPT-2 model.	CLO 4	2
8	Question Answering with BERT	11	Implement a simple question-answering system using a BERT model on a given text.	CLO 4	2
9	Machine Translation using Transformer Models (T5 or MarianMT)	12, 13	Implement a basic machine translation pipeline using a pre-trained MarianMT model for translation between languages.	CLO 5	4
10	Fine-tuning Large Language Models	14, 15	Fine-tune a pre-trained GPT-2 or BERT model on a custom dataset for a specific NLP task (e.g., text summarization or dialogue generation).	CLO5	4

## Learning Resources:

### Text Books:

1. "Speech and Language Processing" by Daniel Jurafsky and James H. Martin – Pearson
2. "Natural Language Processing with Python" by Steven Bird, Ewan Klein, and Edward Loper – O'Reilly Media

### Reference Books:

1. "Hands-On Natural Language Processing with Python" by Rajendra Awasar – Packt Publishing
2. "Deep Learning for Natural Language Processing" by Palash Goyal, Sumit Pandey, Karan Jain – Springer
3. "Neural Network Methods in Natural Language Processing" by Yoav Goldberg – Morgan & Claypool Publishers

### Online Resources/E-learning Resources:

1. Coursera - Natural Language Processing Specialization by DeepLearning.AI:  
<https://www.coursera.org/specializations/natural-language-processing>
2. Hugging Face Transformers Documentation: <https://huggingface.co/docs/transformers/>

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 8</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Virtual Reality</b>			<b>Course Code/ Course Type</b>		<b>UBTCE801</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
-	-	2	2	2	25	-	25	
Pre-Requisite:								
<ol style="list-style-type: none"> <li>1. Basic programming knowledge</li> <li>2. Interest in game design or immersive technologies</li> </ol>								
<b>Course Objectives (CO):</b>			<b>The objectives of Virtual reality are:</b>					
			<ol style="list-style-type: none"> <li>1. To introduce the fundamental principles of Virtual Reality (VR) including hardware, software, and design considerations.</li> <li>2. To explain how human perception and interaction influence the development of VR experiences</li> <li>3. To develop skills in using VR development tools (Unity3D) for creating immersive content.</li> <li>4. To understand and apply best practices in VR storytelling, environment design, and user engagement</li> <li>5. To evaluate emerging applications of VR in entertainment, education, healthcare, and beyond</li> </ol>					
<b>Course Learning Outcomes (CLO):</b>			<b>Students would be able to:</b>					
			<ol style="list-style-type: none"> <li>1. Describe how virtual reality systems work, including the role of headsets, motion tracking, and rendering</li> <li>2. Analyze how human sensory and cognitive systems affect VR experience quality and comfort</li> <li>3. Build simple interactive VR applications using Unity3D and C#.</li> <li>4. Design user-friendly VR interfaces and interactive environments.</li> <li>5. Assess the impact and potential of VR across various industries and propose innovative VR solutions.</li> </ol>					

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Introduction to Virtual Reality</b> History and evolution of VR, Components of VR systems: HMDs, controllers, tracking, Types of VR: immersive, non-immersive, augmented, VR industry overview and future trends	<b>CLO 1</b>	<b>6</b>
<b>UNIT II</b>		
<b>The Hardware and Software of VR</b> Technical architecture: displays, optics, tracking sensors, Frame rates, field of view, latency and their impact, Operating systems and SDKs for VR, Introduction to Unity3D as a VR development platform	<b>CLO 2</b>	<b>6</b>
<b>UNIT III</b>		
<b>Human Perception in VR</b> Visual perception: stereoscopy, depth cues, motion sickness, Audio perception and spatial audio, Interaction design principles, Ergonomics and user comfort in VR environments	<b>CLO 3</b>	<b>6</b>
<b>UNIT IV</b>		

<b>Unity Development for VR</b> Introduction to Unity3D interface and components, Scene creation and VR object interactions, Scripting with C for event-driven interaction, UI elements and teleportation mechanics	<b>CLO 4</b>	<b>6</b>
<b>UNIT V</b>		
<b>Security, I/O and Virtualization</b> Case studies in VR: education, training, simulation, therapy, Ethical and social implications of immersive technology, Career pathways and industry certifications , Final project: Design and prototype a VR application.	<b>CLO 5</b>	<b>6</b>
<b>Total Hours</b>		<b>30</b>

### Learning Resources:

#### Text Books:

1. "Understanding Virtual Reality: Interface, Application, and Design" by William R. Sherman and Alan B. Craig

#### Reference Books:

1. "Learning Virtual Reality" by Tony Parisi
2. "Unity Virtual Reality Projects" by Jonathan Linowes
3. "Augmented Human: How Technology Is Shaping the New Reality" by Helen Papagiannis

#### Online Resources/E-learning Resources:

1. Virtual Reality

<b>Name of the Program:</b>		<b>BTECH CSE</b>			<b>Semester: 8</b>		<b>Level: UG</b>	
<b>Course Name:</b>		<b>Cloud Security</b>			<b>Course Code/ Course Type</b>		<b>UBTCEPE409</b>	
<b>Course Pattern:</b>		<b>2025</b>			<b>Version</b>		<b>1.0</b>	
<b>Assessment Scheme</b>					<b>Teaching Scheme</b>			
<b>Theory</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Total Credits</b>	<b>Hours</b>	<b>CIA (Continuous Internal Assessment)</b>	<b>ESA (End Semester Assessment)</b>	<b>Practical/ Oral</b>	
-	-	1	1	2	25	-	25	

Pre-Requisite:

1. Basic understanding of computer systems, operating systems (especially Windows/Linux), and computer networks. Familiarity with IP addressing, commands, and system administration is essential. Basic programming knowledge (preferably Python) and understanding of web technologies are helpful but not mandatory. Logical thinking, problem-solving ability, and awareness of legal and ethical hacking principles are also required.

<b>Course Objectives (CO):</b>	<p><b>The objectives of Cloud Security are:</b></p> <ol style="list-style-type: none"> <li>1. Explain cloud computing models, architectures, and their associated security challenges</li> <li>2. Train students to implement identity, access, and key management in cloud ecosystems</li> <li>3. Enable learners to assess vulnerabilities, threats, and risks in cloud infrastructures.</li> <li>4. Apply security tools and techniques to protect cloud networks, applications, and data.</li> <li>5. Evaluate cloud compliance standards, governance models, and incident response strategies.</li> </ol>
<b>Course Learning Outcomes (CLO):</b>	<p><b>Students would be able to:</b></p> <ol style="list-style-type: none"> <li>1. Describe cloud computing models, architectures, and shared security models</li> <li>2. Implement IAM and data protection techniques in cloud ecosystems</li> <li>3. Analyze cloud threats, vulnerabilities, and security controls.</li> <li>4. Evaluate security frameworks, compliance standards, and governance strategies.</li> <li>5. Design secure cloud architectures and incident response strategies.</li> </ol>

### Course Contents/Syllabus:

Descriptors/Topics	CLO	Hours
<b>UNIT I</b>		
<b>Introduction to Cloud Computing and Security Foundations</b> Cloud Computing Overview: Service Models (IaaS, PaaS, SaaS), Deployment Models (Public, Private, Hybrid, Multi-cloud), NIST Cloud Reference Architecture, Cloud Security Principles & Challenges, Shared Responsibility Model (AWS, Azure, GCP), Cloud Threat Landscape (CSA), Virtualization & Container Security.	<b>CLO 1</b>	<b>3</b>
<b>UNIT II</b>		
<b>Identity, Access, and Key Management in Cloud</b> IAM Concepts, Authentication & Authorization, RBAC, ABAC, MFA, Privileged Access Management (PAM), Key Management Systems (AWS KMS, Azure Key Vault, GCP KMS), Secrets Management, Directory Services (Azure AD, AWS Cognito), Zero Trust Principles.	<b>CLO 2</b>	<b>3</b>
<b>UNIT III</b>		

<b>Cloud Data, Application, and Network Security</b> Data Lifecycle Security, Encryption, Tokenization, Masking, DLP, Secure Storage Practices DevSecOps, CI/CD Security, API Security (OAuth2, JWT, API Gateways), Cloud Network Security Controls, WAF, IDS/IPS, Security Groups, NACLs Secure VPC/VNet Architecture.	<b>CLO 3</b>	<b>3</b>
<b>UNIT IV</b>		
<b>Cloud Risk Management, Compliance, and Governance</b> Cloud Risk Assessment & Threat Modeling, Compliance Standards: NIST, ISO 27001, CSA CCM, PCI-DSS, HIPAA, Cloud Security Posture Management (CSPM), Governance & Policy Management, Monitoring & Logging (CloudTrail, Azure Monitor, GCP Logging), SIEM in Cloud Environments, Disaster Recovery & Business Continuity.	<b>CLO 4</b>	<b>3</b>
<b>UNIT V</b>		
<b>Incident Response, Forensics, and Advanced Cloud Security</b> Cloud Incident Response, Cloud Forensics Challenges & Techniques, Threat Intelligence in Cloud, MITRE AT-TACK for Cloud, Securing Containers & Kubernetes, Microservices Security, CASB, SASE, Confidential Computing Designing Secure Cloud Architectures.	<b>CLO 5</b>	<b>3</b>
<b>Total Hours</b>		<b>15</b>

## Learning Resources:

### Text Books:

1. Tim Mather, Subra Kumaraswamy Shahed Latif, "Cloud Security and Privacy", O'Reilly Media.
2. Yuri Diogenes Thomas Shinder, "Microsoft Azure Security Infrastructure", Microsoft Press.
3. Vic (J.R.) Winkler, "Securing the Cloud", Syngress/Elsevier.

### Reference Books:

1. Raj Samani et al., "CSA Guide to Cloud Computing", Wiley.
2. Ben Potter & Scott Ward, "AWS Security Best Practices"
3. Aditya Patawari, "Security & Microservices with Kubernetes", Packt.

Develop effective security solutions, defense mechanisms, and mitigation strategies.</li> </ol>

### Course Contents/Syllabus:

<b>Descriptors/Topics</b>	<b>CLO</b>	<b>Hours</b>
<b>UNIT I</b>		
<b>Foundations of Ethical Hacking and Cybersecurity</b> Introduction to Ethical Hacking and Cybersecurity, Evolution of Cyber Threats and Attack Vectors, Hacker Types: White Hat, Black Hat, Grey Hat, Cybercrime and Global Threat Landscape, Phases of Ethical Hacking, Footprinting and Reconnaissance Techniques, Legal & Ethical Issues: Cyber Law, IT Act 2000, GDPR Overview Responsible Disclosure & Professional Conduct	<b>CLO 1</b>	<b>3</b>
<b>UNIT II</b>		

<b>Scanning, Enumeration, and Vulnerability Assessment</b> Network Scanning: Port, Service, OS Detection, Tools: Nmap, Hping, MASSCAN, Zenmap Enumeration Techniques: SMB, SNMP, LDAP, SMTP, DNS, Vulnerability Assessment Concepts, Automated Vulnerability Scanners: Nessus, OpenVAS, Nikto, Understanding CVE, CVSS, MITRE ATTACK, Interpreting & Prioritizing Vulnerabilities	<b>CLO 2</b>	<b>3</b>
<b>UNIT III</b>		
<b>System Hacking, Exploits, and Malware Fundamentals</b> Password Cracking Techniques (Online/Offline), Privilege Escalation (Windows/Linux), Exploitation Frameworks: Metasploit, Armitage, Trojan, Virus, Worm Concepts, Keyloggers, Backdoors, Rootkits, Buffer Overflow Basics (Introductory), Evading IDS/Firewalls, Post-Exploitation Activities Covering Tracks	Clearing Logs	<b>CLO 3</b>
<b>3</b>		
<b>UNIT IV</b>		
<b>Web Application and Wireless Security Attacks</b> Web Application Architecture, OWASP Top 10 Security Risks, SQL Injection, XSS, CSRF, LFI/RFI, Command Injection, Session Hijacking & Cookie Manipulation, Web Application Tools: Burp Suite, OWASP ZAP, Wireless Standards & Security Protocols, Wi-Fi Attacks: Evil Twin, De-authentication, WPA/WPA2 Cracking, Wireless Tools: Aircrack-ng, Kismet, Wireshark.	<b>CLO 4</b>	<b>3</b>
<b>UNIT V</b>		
<b>Penetration Testing Methodology, Reporting, and Security Hardening</b> Penetration Testing Methodologies: PTES, OSSTMM, NIST SP 800-115, Scoping, Rules of Engagement, Documentation, Penetration Testing Process Lifecycle, Report Writing: Executive Summary, Vulnerability Details, Risk Ratings, Blue Team Concepts, Security Monitoring, Firewalls, IDS/IPS, SIEM (Overview), System, Network, and Application Hardening, Incident Response & Digital Forensics Basics, Mitigation Strategies and Secure Architectures, Ethical and Responsible Disclosure Practices.	<b>CLO 5</b>	<b>3</b>
<b>Total Hours</b>		<b>15</b>
